Table of Contents

Form A1: Participant Demographics	3
Form A1a: Social Determinants of Health	13
Form A2: Co-Participant Demographics	19
Form A3: Participant Family History	20
Form A4: Participant Medications	25
Form A4a: ADRD-Specific Treatments	28
Form A5-D2: Participant Health History/Clinician-assessed Medical Conditions	31
Form B1: EVALUATION FORM - Vital Signs and Anthropometrics	41
Form B3: Unified Parkinson's Disease Rating Scale (UPDRS) - Motor Exam	43
Form B4: CDR Dementia Staging Instrument plus NACC FTLD Behavior & Language Domains (CDR Plus NACC FTLD)	47
Form B5: BEHAVIORAL ASSESSMENT - Neuropsychiatric Inventory Questionnaire (NPI-Q)	50
Form B6: BEHAVIORAL ASSESSMENT - Geriatric Depression Scale (GDS)	52
Form B7: FUNCTIONAL ASSESSMENT - NACC Functional Assessment Scale (FAS)	54
Form B8: EVALUATION FORM - Neurological Examination Findings	55
Form B9: Clinician Judgment of Symptoms	59
Form D1a: Clinical Syndrome	65
Form D1b: Etiological Diagnosis and Biomarker Support	85

Coding Guidebook for Form A1: Participant Demographics

INSTRUCTIONS: This form may be completed by intake interviewer based on ADRC scheduling records, participant interview, medical records, and proxy co-participant report (according to what is deemed to be the most reliable source of information, except as indicated for specific questions that may be based on the participant’s perceptions and experience which only they can provide accurate information for). This information can be collected by mail-in survey, electronic capture (web-based), phone or video interview, or during the in-person visit to accommodate and lessen participant visit burden. Check only one box per question unless otherwise specified.

IVP	FVP	Section 1 — Demographics
-----	-----	--------------------------

1.	N.A.	What is your month and year of birth (MM / YYYY)? ___ / _____	
2.	N.A.	In which country or region did you spend most of your childhood? (Enter three character code from Appendix 1) ___ ___ ___ (If unknown, enter AX1)	Common codes: USA – United States; CAN – Canada; MEX – Mexico

If the participant self-administered this form, please verify the code entered is correct and matches a code provided on Appendix 1. This question is designed to capture different early lifetime social determinants of health that might influence cognitive test performance and/or include different dementia risk exposures. Please provide the answer that best captures these characteristics based on the participant’s subjective experience.

3.	N.A.	What is your race and/or ethnicity? (Check all that apply and enter additional details in the space below.)	
		3a. <input type="checkbox"/> American Indian or Alaska Native (AIAN) <i>(SPECIFY, for example, Navajo Nation, Blackfeet Tribe of the Blackfeet Indian Reservation of Montana, Native Village of Barrow Inupiat Traditional Government, Nome Eskimo Community, Aztec, Maya, etc.):</i> _____	3e. <input type="checkbox"/> Middle Eastern or North African 3e1. <input type="checkbox"/> Lebanese 3e2. <input type="checkbox"/> Iranian 3e3. <input type="checkbox"/> Egyptian 3e4. <input type="checkbox"/> Syrian 3e5. <input type="checkbox"/> Iraqi 3e6. <input type="checkbox"/> Israeli 3e7. <input type="checkbox"/> Other (SPECIFY, for example, Moroccan, Yemeni, Kurdish, etc.): _____
		3b. <input type="checkbox"/> Asian 3b1. <input type="checkbox"/> Chinese 3b2. <input type="checkbox"/> Asian Indian 3b3. <input type="checkbox"/> Filipino 3b4. <input type="checkbox"/> Vietnamese 3b5. <input type="checkbox"/> Korean 3b6. <input type="checkbox"/> Japanese 3b7. <input type="checkbox"/> Other (SPECIFY, for example, Pakistani, Hmong, Afghan, etc.): _____	3f. <input type="checkbox"/> Native Hawaiian or Pacific Islander 3f1. <input type="checkbox"/> Native Hawaiian 3f2. <input type="checkbox"/> Samoan 3f3. <input type="checkbox"/> Chamorro 3f4. <input type="checkbox"/> Tongan 3f5. <input type="checkbox"/> Fijian 3f6. <input type="checkbox"/> Marshallese 3f7. <input type="checkbox"/> Other (SPECIFY, for example, Chuukese, Palauan, Tahitian, etc.): _____
		3c. <input type="checkbox"/> Black or African American 3c1. <input type="checkbox"/> African American 3c2. <input type="checkbox"/> Jamaican 3c3. <input type="checkbox"/> Haitian 3c4. <input type="checkbox"/> Nigerian 3c5. <input type="checkbox"/> Ethiopian 3c6. <input type="checkbox"/> Somali 3c7. <input type="checkbox"/> Other (SPECIFY, for example, Trinidadian and Tobagonian, Ghanaian, Congolese, etc.): _____	3g. <input type="checkbox"/> White 3g1. <input type="checkbox"/> English 3g2. <input type="checkbox"/> German 3g3. <input type="checkbox"/> Irish 3g4. <input type="checkbox"/> Italian 3g5. <input type="checkbox"/> Polish 3g6. <input type="checkbox"/> Scottish 3g7. <input type="checkbox"/> Other (SPECIFY, for example, French, Swedish, Norwegian, etc.): _____
		3d. <input type="checkbox"/> Hispanic or Latino 3d1. <input type="checkbox"/> Mexican 3d2. <input type="checkbox"/> Puerto Rican 3d3. <input type="checkbox"/> Salvadoran 3d4. <input type="checkbox"/> Cuban 3d5. <input type="checkbox"/> Dominican 3d6. <input type="checkbox"/> Guatemalan 3d7. <input type="checkbox"/> Other (SPECIFY, for example, Colombian, Honduran, Spaniard, etc.): _____	3h. <input type="checkbox"/> Don't know

Ask the participant (or, if necessary for participants with dementia, the co-participant) what they consider the participant’s race and ethnicity to be. The respondent should choose all that apply.

NOTE ON USING THESE NEW RACE/ETHNICITY OPTIONS FOR NIH RACIAL CATEGORIES

The Office of Management and Budget (OMB) introduced their new race/ethnicity question format in March 2024. Per [OMB](#), “If detailed race and ethnicity data are collected in an interviewer-administered setting, the minimum categories [e.g., Asian, Hispanic, or Latino] should be asked first, treating each category as a yes/no question, followed by the detailed categories associated with the selected minimum categories [e.g., Chinese, Mexican].” The question that should be asked is as written, “What is your race and/or ethnicity?”. You may need to drill down on the racial/ethnicity sub-categories for the more detailed information requested.

This question is focused on lineage. Please refer to the [NIH OMB instructions](#).

NOTE ON FORM CLS (LINGUISTIC HISTORY FORM)

Complete the Linguistic History Form (Form CLS) if the participant or co-participant indicates that the participant is Hispanic/Latino and has not completed Form CLS at a previous visit.

Form CLS must be completed and submitted to NACC only **ONCE**. It may be completed along with any UDS Initial or Follow-up visit. Information to complete CLS may be obtained from the participant or a co-participant.

The next four questions ask about your gender identity, sex assigned at birth, sexual orientation, and intersex status. This information will be used to help us improve health, well-being, and quality of care. By gender identity, we mean the inner sense that you have of yourself as being a man, woman, or a different gender. Gender identity can be different from your sex assigned at birth or your sexual orientation, and it can change over time.

Sex, gender identity, and sexual orientation questions were derived from the following report:

National Academies of Sciences, Engineering and Medicine. 2022. Measuring Sex, Gender Identity, and Sexual Orientation. Washington, D.C.: The National Academies Press. <https://doi.org/10.17226/26424>

This information should come from self-report only. It should not be inferred by the co-participant and/or ADRC staff. Note that all questions include an opt out for participants that are unsure and/or prefer not to answer. You should assure participants that the data collected is protected for both confidentiality and privacy. If the participant has a CDR over 1, the answers to these questions may not be reliable and a default answer of "Don't Know" may be most appropriate.

IVP **FVP** **Section 1 — Demographics** *continued...*

4.	1.	Which term(s) best describes your current gender identity? <i>(Check all that apply)</i>	a. <input type="checkbox"/> 1 Man b. <input type="checkbox"/> 1 Woman c. <input type="checkbox"/> 1 Transgender man d. <input type="checkbox"/> 1 Transgender woman e. <input type="checkbox"/> 1 Non-binary/genderqueer f. <input type="checkbox"/> 1 Two-Spirit (if you are AIAN) g. <input type="checkbox"/> 1 I use a different term (SPECIFY): _____ h. <input type="checkbox"/> 1 Don't know i. <input type="checkbox"/> 1 Prefer not to answer
----	----	---	--

Ask the participant which term(s) best describe their gender identity. The participant should choose all that apply.

Transgender: An umbrella term for people whose gender identity and/or expression is different from cultural expectation based on the sex they were assigned at birth. Being transgender does not imply any specific sexual orientation. Therefore, transgender people may identify as straight, gay, lesbian, bisexual, etc. [hrc.org/resources/glossary-of-terms]. A transgender man was assigned female at birth. A transgender woman was assigned male at birth.

Non-binary / genderqueer: Description for a person who does not identify exclusively as a man or a woman. Non-binary people may identify as being both a man and woman, somewhere in between, or as falling completely outside these categories. While many also identify as transgender, not all non-binary people do. Non-binary can also be used as an umbrella term encompassing identities such as agender, bigender, genderqueer, or gender-fluid. [hrc.org/resources/glossary-of-terms]

Two-spirit: A term used within some American Indian (AI) and Alaska Native (AN) communities to refer to a person who identifies as having both a male and a female essence or spirit. The term encompasses sexual, cultural, gender, and spiritual identities. Non-indigenous people should not use this term. [pflag.org/glossary]

5.	N.A.	What sex were you assigned at birth, on your original birth certificate?	<input type="checkbox"/> 1 Male <input type="checkbox"/> 2 Female <input type="checkbox"/> 9 Don't know <input type="checkbox"/> 8 Prefer not to answer
6.	N.A.	Have you ever been diagnosed by a medical doctor or other health professional with an intersex condition or a "Difference of Sex Development (DSD)" or were you born with (or developed naturally in puberty) genitals, reproductive organs, and/or chromosomal patterns that do not fit standard definitions of male or female?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes <input type="checkbox"/> 9 Don't know <input type="checkbox"/> 8 Prefer not to answer

7. 2. Which term(s) best describes your sexual orientation? (Check all that apply)

a. 1 Lesbian or gay
 b. 1 Straight/heterosexual
 c. 1 Bisexual
 d. 1 Two-Spirit (if you are AIAN)
 e. 1 I use a different term (SPECIFY, e.g., asexual, queer, questioning): _____
 f. 1 Don't know
 g. 1 Prefer not to answer

Ask the participant which term(s) best describe their sexual orientation. The participant should choose all that apply.

Two-spirit: A term used within some American Indian (AI) and Alaska Native (AN) communities to refer to a person who identifies as having both a male and a female essence or spirit. The term encompasses sexual, cultural, gender, and spiritual identities. Non-indigenous people should not use this term. [pflag.org/glossary]

8. N.A. What is your primary language? (Primary language is defined as the predominant language you have used throughout your life. Please take into consideration first language learned and used as well as the length of use.)

1 English
 2 Spanish
 3 Chinese dialect
 8 Other (SPECIFY): _____
 9 Don't know

Record the language that the participant (or co-participant) considers to be the participant's main language that they speak and write best, even if they speak more than one and or consider their primary language different from their first language.

9. N.A. Are you left- or right-handed (for example, which hand would normally be used for writing)?

1 Left-handed
 2 Right-handed
 3 Ambidextrous
 9 Don't know

If the participant describes themselves as ambidextrous, check the box that describes the hand used for writing rather than the hand used for other activities as this question focuses on language dominance over bilateral manual dexterity. If the participant writes with both hands, then they could be considered ambidextrous.

10a. N.A. How many years of education have you completed? (99 = Unknown) _____

This question refers to completed years of education, rather than achieved educational levels. Enter the total number of years of education completed. Total years should include trade school and/or other formal professional training and not be restricted to classical education (i.e., grammar, middle, junior high, high school and classic college attendance). If the participant has attended formal education on a part-time basis over an extended period of time, please report standard years for level obtained rather than using whole years for part-time attendance.

Examples: If the participant attended school for eight years, enter "08". If the participant completed 17.5 years of school, enter "17", regardless of degrees attempted or earned. If the participant attended to school for 25 years to earn a PhD, enter "25".

If the participant or co-participant is unable or unwilling to answer the question, enter "99".

10b. N.A. What is your highest achieved level of education?

1 Less than high school
 2 High school or GED
 3 Some college
 4 Bachelor's degree
 5 Master's degree
 6 Doctorate
 9 Don't know

This question refers to achieved educational levels; do not select a level attempted but not completed.

Example: If the participant earned a bachelor's degree but did not complete an attempted master's degree, enter **4 = Bachelor's degree**.

11. 3. What is your current marital status?

1 Married
 2 Widowed
 3 Divorced
 4 Separated
 5 Never married (or marriage was annulled)
 6 Living with a domestic partner that you are not married to
 9 Don't know

12.	4.	What is your living situation?	<input type="checkbox"/> 1 Live alone <input type="checkbox"/> 2 Live with one other person: a spouse or partner <input type="checkbox"/> 3 Live with one other person: a relative, friend, or roommate <input type="checkbox"/> 4 Live with caregiver who is not spouse/partner, relative, or friend <input type="checkbox"/> 5 Live with a group (<i>related or not related</i>) in a private residence <input type="checkbox"/> 6 Live in group home (<i>e.g., assisted living, nursing home, convent</i>) <input type="checkbox"/> 9 Don't know
-----	----	--------------------------------	---

"Caregiver" applies to a person who provides assistance with another person's social or health needs, and may include help with activities of daily living, emotional support, and/or help with managing a chronic disease or disability.

13.	5.	What is your primary type of residence?	<input type="checkbox"/> 1 Single- or multi-family private residence (apartment, condo, house) <input type="checkbox"/> 2 Retirement community or independent group living <input type="checkbox"/> 3 Assisted living, adult family home, or boarding home <input type="checkbox"/> 4 Skilled nursing facility, nursing home, hospital, or hospice <input type="checkbox"/> 5 Do not have housing (<i>e.g., staying with others, in a hotel, in a shelter, living outside on the street, on a beach, in a car, or in a park</i>) <input type="checkbox"/> 9 Don't know
-----	----	---	---

Please choose the answer that is the best fit.

14.	6.	What are the first three digits of the ZIP code of your primary residence? <i>(For example, if your ZIP code is 12345, enter 123.)</i>	___ ___ ___	<i>(If unknown, leave blank)</i>
-----	----	---	-------------	----------------------------------

15.	N.A.	Have you ever served on active duty in the U.S. Armed Forces, military Reserves, or National Guard?	<input type="checkbox"/> 0 No (IF NO, SKIP TO QUESTION 17) <input type="checkbox"/> 1 Yes <input type="checkbox"/> 9 Don't know
-----	------	---	--

Active duty does not include training in the Reserves or National Guard, but DOES include activation, for example, for the Persian Gulf War.

16.	7.	Have you ever obtained medical care or prescription drugs from a Veterans Affairs (VA) facility?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes <input type="checkbox"/> 9 Don't know
-----	----	--	--

Section 2 — Memory

17.	8.	How much time in total do you spend each week exercising or engaged in physically strenuous activities that cause increases in your breathing or heart rate for at least 10 minutes continuously? <i>(Include activity at work, traveling to and from places, fitness activities, and recreational activities.)</i>	<input type="checkbox"/> 1 None <input type="checkbox"/> 2 1 hour or less <input type="checkbox"/> 3 2.5 hours or less <input type="checkbox"/> 4 More than 2.5 hours <input type="checkbox"/> 8 Prefer not to answer <input type="checkbox"/> 9 Don't know
-----	----	--	--

The following three questions are intended to capture subjective cognitive impairment in the memory domain. These questions refer to memory only and not behavior, motor, or other non-memory symptoms. These questions should only be answered by the participant.

Select "Don't know/Prefer not to answer" for IVP Q18-20 (FVP Q9-11) if the co-participant is completing this form on behalf of the participant.

18.	9.	Do you feel like your memory is becoming worse?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes, but this does not worry me <input type="checkbox"/> 2 Yes, and this worries me <input type="checkbox"/> 9 Don't know / Prefer not to answer
-----	----	---	--

This should be answered in relation to the participant's previous memory abilities.

19.	10.	About how often do you have trouble remembering things?	<input type="checkbox"/> 1 Never <input type="checkbox"/> 2 Rarely <input type="checkbox"/> 3 Sometimes <input type="checkbox"/> 4 Often <input type="checkbox"/> 5 Very often <input type="checkbox"/> 9 Don't know / Prefer not to answer
-----	-----	---	--

20.	11.	Compared to 10 years ago, would you say that your memory is much worse, a little worse, the same, a little better, or much better?	<input type="checkbox"/> 1 Much better <input type="checkbox"/> 2 A little better <input type="checkbox"/> 3 The same <input type="checkbox"/> 4 A little worse <input type="checkbox"/> 5 Much worse <input type="checkbox"/> 9 Don't know / Prefer not to answer
-----	-----	--	---

For ADRC use only:

The next two questions use the Area Deprivation Index (ADI) lookup at <https://www.neighborhoodatlas.medicine.wisc.edu/mapping>. Enter the participant's state and full address.

Enter the participant's state at <https://www.neighborhoodatlas.medicine.wisc.edu/mapping>. After the state map loads, enter the participant's full address (including a minimum of street address and city) in the lower right and click "search." A box will pop up with the state decile and national percentile. Enter these values in for the following two questions.

ADI state decile and national percentile must be looked up at each visit, even if the participant has not moved, since these values can change over time.

21.	12.	ADI state-only decile: <div style="text-align: right;">___ _ _ <i>(If unknown, leave blank)</i></div>	
22.	13.	ADI national percentile: <div style="text-align: right;">___ _ _ <i>(If unknown, leave blank)</i></div>	
23.	N.A.	Participant's primary occupation throughout their working life <i>(See Appendix 2 for codes):</i> <div style="text-align: right;">___ _ _ <i>(If unknown, leave blank)</i></div>	

Choose the occupation code that best fits the participant's primary occupation throughout their working life. Please use the participant's judgement as to what their primary occupation was in cases where they may have had several different occupations. If a close fit cannot be found among the available options, use the header "#00" codes, e.g. 500=Skilled Manual Employees.

For participants who worked inside the home and were not formally employed, use 713=Homemaker.

24.	N.A.	ADRC enrollment type:	<input type="checkbox"/> 1 Participant is supported primarily by ADRC funding (<i>Clinical Core, Satellite Core, or other ADRC Core or project</i>) <input type="checkbox"/> 2 Participant is supported primarily by a non-ADRC study (<i>e.g., R01, including non-ADRC grants supporting FTLD Module participation</i>)
-----	------	-----------------------	---

If the participant is engaged in more than one study, please answer in relation to the study that is funding the UDS form completion. If co-funded equally, please select 1 = ADRC funding.

25.	N.A.	Principal referral source	<input type="checkbox"/> 1 Self <input type="checkbox"/> 2 Non-professional personal contact who is not a current or previous ADRC participant (<i>e.g., spouse/partner, relative, friend, coworker</i>) <input type="checkbox"/> 3 Current or previous ADRC participant (END FORM HERE) <input type="checkbox"/> 4 ADRC clinician, staff, or investigator (END FORM HERE) <input type="checkbox"/> 5 Non-ADRC healthcare professional (<i>e.g., clinician, nurse, social worker</i>) (END FORM HERE) <input type="checkbox"/> 6 Other research study clinician/staff/investigator (<i>non-ADRC; e.g., ADNI, Women's Health Initiative, LEADS, ALL-FTD</i>) (END FORM HERE) <input type="checkbox"/> 8 Other (SPECIFY): _____ (END FORM HERE) <input type="checkbox"/> 9 Unknown (END FORM HERE)
-----	------	---------------------------	--

Select **1=Self** if the participant decided to enroll in the ADRC on their own initiative (e.g., after seeing an advertisement, media appeal, website, news article, or learning about the ADRC's research through a community event). ADRC clinician, staff or investigator includes members of all ADRC cores and should not be restricted to clinical core staff.

Many participants may have been recruited through multiple contacts. Please use the participants report of the primary referral source responsible for ultimate engagement which may nor necessarily be the last contact prior to enrollment, but rather the most influential.

26. N.A. If the referral source was self-referral or a nonprofessional contact, how did the referral source learn of the ADRC?

(choose most relevant option)

Community outreach event

- 1 ADRC sponsored event
- 2 Event sponsored by an external organization (e.g., Alzheimer’s Association event, institution sponsored venue, community health fair, professional conference)

Other ADRC outreach

- 3 Newsletter (mailed or digital)
- 4 Study flyer/brochure (mailed or digital)
- 5 Center website
- 6 Center social media (SPECIFY): _____
- 7 Center registry (SPECIFY): _____

Other registries, websites, organizations, or media promotions

- 8 Website (SPECIFY): _____
- 9 Media (SPECIFY): _____
- 10 Registry (SPECIFY): _____
- 88 Other (SPECIFY): _____
- 99 Unknown

Participants may have learned of the ADRC through multiple sources. Please use the participants report of the primary referral source responsible for ultimate engagement which may not necessarily be the last contact prior to enrollment, but rather the most influential.

533	Noncommissioned officers in the military (below rank of master sergeant / C.P.O.)			633	Wrappers (stores / factories)		
534	Painters						
535	Paperhangers						
536	Patrolmen						
537	Piano builders						

Coding Guidebook for Form A1a: Social Determinants of Health

Frequently Asked Questions

Q: The participant has cognitive impairment (or a CDR>1). Should I give the A1a form to them?

A: No, the A1a form should only be given to those participants who are cognitively unimpaired enough to provide reliable and accurate responses (generally, CDR<1).

Q: The participant came to the visit with a co-participant. Can I have the co-participant fill the A1a form out for the participant?

A: No, the A1a form is for the participant to fill out as it asks about experiences and perceptions that only the participant would know.

Q: The participant does not feel comfortable filling out forms on their own, can the A1a form be administered by staff?

A: The A1a form should be self-administered by the participant. The form can be sent to the participant before the UDS visit (via email or electronically). However, if the participant is unable to fill out the form due to low literacy or some other reason, a staff member who is comfortable asking these personal (non-medical) questions, may administer the form.

Q: What happens if the participant does not want to answer the questions or feels the questions are too personal?

A: We have added "Prefer not to answer" to every question. The participant does not have to answer any question that they feel is intrusive.

Q: What do I tell a participant who wants to know why we are asking these kinds of questions?

A: We have added additional instructions to the form to explain why these questions are important. Please inform the participant that we are collecting all types of information that we think is important for brain health. Some information, like the questions on the A1a form, are important to understand the context in which people live, or the experiences that they have on a daily basis. We know that these social factors are important for health, but they have rarely been examined in regards to brain health. This is an important opportunity to collect data on an aspect of human experience that we know little about.

INSTRUCTIONS: The following questions are designed to assess your current and past life experiences. These questions will help us understand how certain experiences affect your health. You do not have to answer any question that makes you feel uncomfortable.

IVP	FVP	Section 1 — Transportation
<p>In this section we are trying to understand the extent to which lack of reliable and consistent transportation is a barrier to accomplishing important activities, such as going to the doctor for appointments, going grocery shopping, or picking up medications (these are only examples).</p>		
1.	1.	<p>Do you or someone in your household currently own a car?</p> <p><input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes <input type="checkbox"/> 8 Prefer not to answer</p>
2.	2.	<p>Do you have consistent access to transportation?</p> <p><input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes <input type="checkbox"/> 8 Prefer not to answer</p>
<p>To get to the places they need to go, people might walk, bike, take a bus, train or taxi, drive a car, or get a ride. The next three questions are trying to assess whether or not you have had recent issues with transportation.</p>		
3.	3.	<p>In the past 30 days, how often were you not able to leave the house when you wanted to because of a problem with transportation?</p> <p><input type="checkbox"/> 1 Often <input type="checkbox"/> 2 Sometimes <input type="checkbox"/> 3 Never <input type="checkbox"/> 8 Prefer not to answer</p>
4.	4.	<p>In the past 30 days, how often did you worry about whether or not you would be able to get somewhere because of a problem with transportation?</p> <p><input type="checkbox"/> 1 Often <input type="checkbox"/> 2 Sometimes <input type="checkbox"/> 3 Never <input type="checkbox"/> 8 Prefer not to answer</p>
5.	5.	<p>In the past 30 days, how often has a lack of transportation kept you from medical appointments or from doing things needed for daily living?</p> <p><input type="checkbox"/> 1 Often <input type="checkbox"/> 2 Sometimes <input type="checkbox"/> 3 Never <input type="checkbox"/> 8 Prefer not to answer</p>

|-----|-----|---|--|
| 15. | 15. | What was your mother’s (or primary person who raised you up until age 18) highest level of education completed at the time they were raising you? | <input type="checkbox"/> 1 Never attended school or only attended kindergarten
<input type="checkbox"/> 2 Grades 1 through 8 (elementary)
<input type="checkbox"/> 3 Grades 9 through 11 (some high school)
<input type="checkbox"/> 4 Grade 12 or GED (high school graduate)
<input type="checkbox"/> 5 College 1 year to 3 years (some college)
<input type="checkbox"/> 6 College 4 years or more (college graduate)
<input type="checkbox"/> 8 Prefer not to answer/Not applicable
<input type="checkbox"/> 9 Do not know |
|-----|-----|---|--|

Section 3 — Social connections, activities, and environment

These next set of questions are designed to learn what you think about your social connections, the types of activities you spend your time on, and how you view your home and neighborhood.

Following are some statements to learn how you describe yourself in general. For each statement, select the number that most closely represents your opinion.

- | | | | |
|-----|-----|---|---|
| 16. | 16. | I experience a general sense of emptiness | <input type="checkbox"/> 1 Strongly disagree
<input type="checkbox"/> 2 Disagree
<input type="checkbox"/> 3 Neither disagree or agree
<input type="checkbox"/> 4 Agree
<input type="checkbox"/> 5 Strongly agree
<input type="checkbox"/> 8 Prefer not to answer |
| 17. | 17. | I miss having people around | <input type="checkbox"/> 1 Strongly disagree
<input type="checkbox"/> 2 Disagree
<input type="checkbox"/> 3 Neither disagree or agree
<input type="checkbox"/> 4 Agree
<input type="checkbox"/> 5 Strongly agree
<input type="checkbox"/> 8 Prefer not to answer |
| 18. | 18. | I feel like I don't have enough friends | <input type="checkbox"/> 1 Strongly disagree
<input type="checkbox"/> 2 Disagree
<input type="checkbox"/> 3 Neither disagree or agree
<input type="checkbox"/> 4 Agree
<input type="checkbox"/> 5 Strongly agree
<input type="checkbox"/> 8 Prefer not to answer |
| 19. | 19. | I often feel abandoned | <input type="checkbox"/> 1 Strongly disagree
<input type="checkbox"/> 2 Disagree
<input type="checkbox"/> 3 Neither disagree or agree
<input type="checkbox"/> 4 Agree
<input type="checkbox"/> 5 Strongly agree
<input type="checkbox"/> 8 Prefer not to answer |
| 20. | 20. | I miss having a really close friend | <input type="checkbox"/> 1 Strongly disagree
<input type="checkbox"/> 2 Disagree
<input type="checkbox"/> 3 Neither disagree or agree
<input type="checkbox"/> 4 Agree
<input type="checkbox"/> 5 Strongly agree
<input type="checkbox"/> 8 Prefer not to answer |

The next four questions are about how you spend your time.

- | | | | |
|-----|-----|--|--|
| 21. | 21. | If your parents are still alive, how often do you have contact with them (including mother, father, mother-in-law, and father-in-law) either in person, by phone, mail, or email (e.g., any online interaction)? | <input type="checkbox"/> 0 Parents not living
<input type="checkbox"/> 1 Once a year or less
<input type="checkbox"/> 2 Several times a year
<input type="checkbox"/> 3 Several times a month
<input type="checkbox"/> 4 Several times a week
<input type="checkbox"/> 5 Everyday or almost everyday
<input type="checkbox"/> 8 Prefer not to answer |
|-----|-----|--|--|

IVP	FVP	Section 3 — Social connections, activities, and environment	continued...
22.	22.	If you have children, how often do you have contact with your children (including child[ren]-in-law and stepchild[ren]) either in person, by phone, mail, or email (e.g., any online interaction)?	<input type="checkbox"/> 0 Do not have children <input type="checkbox"/> 1 Once a year or less <input type="checkbox"/> 2 Several times a year <input type="checkbox"/> 3 Several times a month <input type="checkbox"/> 4 Several times a week <input type="checkbox"/> 5 Everyday or almost everyday <input type="checkbox"/> 8 Prefer not to answer
23.	23.	How often do you have contact with close friends either in person, by phone, mail, or email (e.g., any online interaction)?	<input type="checkbox"/> 0 Do not have close friends <input type="checkbox"/> 1 Once a year or less <input type="checkbox"/> 2 Several times a year <input type="checkbox"/> 3 Several times a month <input type="checkbox"/> 4 Several times a week <input type="checkbox"/> 5 Everyday or almost everyday <input type="checkbox"/> 8 Prefer not to answer
24.	24.	How often do you participate in activities outside the home (e.g., religious activities, educational activities, volunteer work, paid work, or activities with groups or organizations)?	<input type="checkbox"/> 0 Do not participate in activities outside the home <input type="checkbox"/> 1 Once a year or less <input type="checkbox"/> 2 Several times a year <input type="checkbox"/> 3 Several times a month <input type="checkbox"/> 4 Several times a week <input type="checkbox"/> 5 Everyday or almost everyday <input type="checkbox"/> 8 Prefer not to answer

This next set of questions is about how safe you feel in different contexts.

25.	25.	How safe do you feel in your home and community (or neighborhood)?	
25a.	25a.	Home	<input type="checkbox"/> 1 Very safe <input type="checkbox"/> 2 Mostly safe <input type="checkbox"/> 3 Unsafe at times <input type="checkbox"/> 4 Very unsafe <input type="checkbox"/> 8 Prefer not to answer
25b.	25b.	Community (or neighborhood)	<input type="checkbox"/> 1 Very safe <input type="checkbox"/> 2 Mostly safe <input type="checkbox"/> 3 Unsafe at times <input type="checkbox"/> 4 Very unsafe <input type="checkbox"/> 8 Prefer not to answer

IVP	FVP	Section 4 — Experiences with the healthcare system
-----	-----	--

These next five questions are about your experiences with the healthcare system over the past year. In answering the questions, please think about your regular medical doctors (not the doctors you see for this research study).

26.	26.	In the past year, how often did you delay seeking medical attention for a problem that was bothering you?	<input type="checkbox"/> 1 All of the time <input type="checkbox"/> 2 Most of the time <input type="checkbox"/> 3 Sometimes <input type="checkbox"/> 4 None or almost none of the time <input type="checkbox"/> 5 Not applicable <input type="checkbox"/> 8 Prefer not to answer
27.	27.	In the past year, how often did you experience challenges in filling a prescription?	<input type="checkbox"/> 1 All of the time <input type="checkbox"/> 2 Most of the time <input type="checkbox"/> 3 Sometimes <input type="checkbox"/> 4 None or almost none of the time <input type="checkbox"/> 5 Not applicable <input type="checkbox"/> 8 Prefer not to answer

28.	28.	In the past year, how often did you miss a follow-up medical appointment that was scheduled?	<input type="checkbox"/> 1 All of the time <input type="checkbox"/> 2 Most of the time <input type="checkbox"/> 3 Sometimes <input type="checkbox"/> 4 None or almost none of the time <input type="checkbox"/> 5 Not applicable <input type="checkbox"/> 8 Prefer not to answer
29.	29.	In the past year, how often did you follow a doctor's advice or treatment plan when it was given?	<input type="checkbox"/> 1 All of the time <input type="checkbox"/> 2 Most of the time <input type="checkbox"/> 3 Sometimes <input type="checkbox"/> 4 None or almost none of the time <input type="checkbox"/> 5 Not applicable <input type="checkbox"/> 8 Prefer not to answer
30.	30.	Overall, which of these describes your health insurance, access to healthcare services, and access to medications?	<input type="checkbox"/> 1 Not available to any extent <input type="checkbox"/> 2 Below the level of my needs <input type="checkbox"/> 3 Able to meet my needs <input type="checkbox"/> 4 Exceeds my needs <input type="checkbox"/> 8 Prefer not to answer

Section 5 — Experiences of Discrimination

Research has shown that experiences of unfair treatment in daily life, for any reason, can negatively affect health. Please answer the following questions about whether you have experienced unfair treatment in the following ways.

31.	31.	In your day-to-day life how often are you treated with less courtesy or respect than other people?	<input type="checkbox"/> 1 Almost every day <input type="checkbox"/> 2 At least once a week <input type="checkbox"/> 3 A few times a month <input type="checkbox"/> 4 A few times a year <input type="checkbox"/> 5 Less than once a year <input type="checkbox"/> 6 Never <input type="checkbox"/> 8 Prefer not to answer
32.	32.	In your day-to-day life how often do you receive poorer service than other people at restaurants or stores?	<input type="checkbox"/> 1 Almost every day <input type="checkbox"/> 2 At least once a week <input type="checkbox"/> 3 A few times a month <input type="checkbox"/> 4 A few times a year <input type="checkbox"/> 5 Less than once a year <input type="checkbox"/> 6 Never <input type="checkbox"/> 8 Prefer not to answer
33.	33.	In your day-to-day life how often do people act as if they think you are not smart?	<input type="checkbox"/> 1 Almost every day <input type="checkbox"/> 2 At least once a week <input type="checkbox"/> 3 A few times a month <input type="checkbox"/> 4 A few times a year <input type="checkbox"/> 5 Less than once a year <input type="checkbox"/> 6 Never <input type="checkbox"/> 8 Prefer not to answer
34.	34.	In your day-to-day life how often do people act as if they are afraid of you?	<input type="checkbox"/> 1 Almost every day <input type="checkbox"/> 2 At least once a week <input type="checkbox"/> 3 A few times a month <input type="checkbox"/> 4 A few times a year <input type="checkbox"/> 5 Less than once a year <input type="checkbox"/> 6 Never <input type="checkbox"/> 8 Prefer not to answer
35.	35.	In your day-to-day life how often are you threatened or harassed?	<input type="checkbox"/> 1 Almost every day <input type="checkbox"/> 2 At least once a week <input type="checkbox"/> 3 A few times a month <input type="checkbox"/> 4 A few times a year <input type="checkbox"/> 5 Less than once a year <input type="checkbox"/> 6 Never <input type="checkbox"/> 8 Prefer not to answer

36.	36.	How frequently do you receive poorer service or treatment from doctors or in hospitals compared to other people?	<input type="checkbox"/> 1 All of the time <input type="checkbox"/> 2 Most of the time <input type="checkbox"/> 3 Sometimes <input type="checkbox"/> 4 None or almost none of the time <input type="checkbox"/> 5 Not applicable <input type="checkbox"/> 8 Prefer not to answer
37.	37.	When reflecting on the day-to-day experiences in questions 33 to 38, what do you think are the main reasons for these experiences? <i>(Check all that apply)</i>	39a1. <input type="checkbox"/> 1 My ancestry or national origins 39a2. <input type="checkbox"/> 1 My gender 39a3. <input type="checkbox"/> 1 My race 39a4. <input type="checkbox"/> 1 My age 39a5. <input type="checkbox"/> 1 My religion 39a6. <input type="checkbox"/> 1 My height 39a7. <input type="checkbox"/> 1 My weight 39a8. <input type="checkbox"/> 1 Some other aspect of my physical appearance 39a9. <input type="checkbox"/> 1 My sexual orientation 39a10. <input type="checkbox"/> 1 My education or income level 39a11. <input type="checkbox"/> 1 A physical disability 39a12. <input type="checkbox"/> 1 My shade of skin color 39a13. <input type="checkbox"/> 1 Other 39a14. <input type="checkbox"/> 1 Not applicable - I do not have these experiences in my day-to-day life (END FORM HERE) 39a15. <input type="checkbox"/> 1 Prefer not to answer
38.	38.	When you have had day-to-day experiences like those in questions 33 to 38, would you say they have been very stressful, moderately stressful, or not stressful?	<input type="checkbox"/> 1 Very stressful <input type="checkbox"/> 2 Moderately stressful <input type="checkbox"/> 3 Not stressful <input type="checkbox"/> 9 Don't know <input type="checkbox"/> 8 Prefer not to answer

Coding Guidebook for Form A2: Co-participant Demographics

INSTRUCTIONS: This form is to be completed by intake interviewer based on co-participant's report. This form should not be provided directly to the co-participant. Check only one box per question.

Section 1 — Co-participant's Relationship to Participant

N.A.	1.	Is this a new co-participant (i.e., one who was not a co-participant at any past UDS visit)?	<input type="checkbox"/> 0 No	<input type="checkbox"/> 1 Yes
1.	2.	What is the co-participant's relationship to the participant?	<input type="checkbox"/> 1 Spouse, partner, or companion (include ex-spouse, ex-partner, fiancé(e), boyfriend, girlfriend) <input type="checkbox"/> 2 Child (by blood or through marriage or adoption) <input type="checkbox"/> 3 Sibling (by blood or through marriage or adoption) <input type="checkbox"/> 4 Other relative (by blood or through marriage or adoption) <input type="checkbox"/> 5 Friend, neighbor, or someone known through family, friends, work, or community (e.g., church) <input type="checkbox"/> 6 Paid caregiver, health care provider, or clinician	
2.	3.	How long has the co-participant known the participant? (If the co-participant has known the participant for less than 1 year, use 0.)	_____	Years (999 = Unknown)

If the exact number of years is unknown, ask the co-participant to estimate it. If the co-participant is not able to estimate the number of years he/she has known the participant, enter **999=Unknown**.

3.	4.	Does the co-participant live with the participant?	<input type="checkbox"/> 0 No	<input type="checkbox"/> 1 Yes (SKIP TO QUESTION 5/6)
----	----	--	-------------------------------	--

Select **1=Yes** if the co-participant currently lives with the participant at least part of the time.

4.	5.	What is the primary mode of contact with the participant?	<input type="checkbox"/> 1 In-person <input type="checkbox"/> 2 Telephone <input type="checkbox"/> 3 Video conferencing	<input type="checkbox"/> 4 Texting or email <input type="checkbox"/> 5 Social media platforms <input type="checkbox"/> 6 Other (SPECIFY): _____
4a1.	5a1.	What is the approximate frequency of types of contact?	<input type="checkbox"/> 1 Daily <input type="checkbox"/> 2 At least three times per week <input type="checkbox"/> 3 Weekly	<input type="checkbox"/> 4 At least three times per month <input type="checkbox"/> 5 Monthly <input type="checkbox"/> 6 Less than once a month
4a2.	5a2.	What is the average amount of time spent in contact with the participant during each encounter? (Please include an average of all encounter types.)	<input type="checkbox"/> 1 Less than 5 minutes (appropriate for texting or email and may be applicable to other modes of contact as well)	<input type="checkbox"/> 2 5-15 minutes <input type="checkbox"/> 3 15-30 minutes <input type="checkbox"/> 4 30-60 minutes <input type="checkbox"/> 5 Longer than one hour
5.	6.	Is there a question about the co-participant's reliability?	<input type="checkbox"/> 0 No	<input type="checkbox"/> 1 Yes

The co-participant's reliability should be based on a consensus opinion from the staff that interacted with the co-participant. This question would best be filled out after the UDS assessments have been completed, when a better judgment can be made about the co-participant's reliability. If there is any reason to doubt the reliability of the co-participant, select **1=Yes**.

Section 2 — Co-participant's Judgment of Participant's Memory

Ask the next three questions **directly to the co-participant**.

6.	7.	Do you feel like the participant's memory is becoming worse?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes, but this does not worry me <input type="checkbox"/> 2 Yes, and this worries me <input type="checkbox"/> 9 Unknown
7.	8.	About how often does the participant have trouble remembering things?	<input type="checkbox"/> 1 Never <input type="checkbox"/> 2 Rarely <input type="checkbox"/> 3 Sometimes <input type="checkbox"/> 4 Often <input type="checkbox"/> 5 Very Often <input type="checkbox"/> 9 Unknown
8.	9.	Compared to 10 years ago, would you say that the participant's memory is much worse, a little worse, the same, a little better, or much better?	<input type="checkbox"/> 1 Much better <input type="checkbox"/> 2 A little better <input type="checkbox"/> 3 The same <input type="checkbox"/> 4 A little worse <input type="checkbox"/> 5 Much worse <input type="checkbox"/> 9 Unknown

If the co-participant has not known the participant for at least 10 years, select **9 = Unknown**.

Coding Guidebook for Form A3: Participant Family History

INSTRUCTIONS: *This form is to be completed by a clinician with experience in evaluating participants with neurological and psychiatric diagnoses. Estimates are allowed if exact birth year or age at death is unknown.*

INSTRUCTIONS FOR SECTIONS 1–3:

For biological parents, full siblings, and biological children with no neurological or psychiatric problem, provide the birth month, birth year, and age at death, enter **00 = No known neurological/psychiatric diagnosis** in the primary diagnosis column, and leave the rest of the row blank.

For biological parents, full siblings, and biological children with an unknown neurological or psychiatric condition (clinician cannot determine specific neurological or psychiatric condition based on all available information), provide the birth year, and age at death, enter **99=Unknown** in the primary diagnosis column, and leave the subsequent items in the row blank.

If multiple neurological problems exist for a parent, sibling, or child, enter the code for the neurological/psychiatric condition that corresponds to the primary diagnosis in the primary diagnosis column, and then enter the code for the neurological/psychiatric condition that corresponds to the secondary diagnosis in the secondary diagnosis column.

When entering a code for the primary diagnosis (“Primary Dx”) and secondary diagnosis (“Secondary DX”) columns, select the most specific diagnosis that is known.

If the method of evaluation is unknown, select **1=Participant/family report**. See Appendix (page 5) for descriptions of the methods of evaluation.

“Age of onset” refers to the age at which the first progressive decline in cognition or behavior was noted, not the age at which diagnosis was made. If the participant and/or co-participant is unwilling or unable to answer, enter **999=Unknown**. If the primary diagnosis is a congenital condition, or present since birth, enter an age of onset of “0”.

Birth year for parents, siblings, and children should be consistent across forms:

- Uniform Data Set (UDS) Initial Visit Form A3 or UDS Follow-up Visit Form A3 (if applicable),
- FTLD Module Initial Visit Form A3a or FTLD Module Follow-up Visit Form A3a (if applicable), and
- Any previously submitted FTLD Module Initial Visit Form A3F and Follow-up Visit Form A3F (if applicable).

IVP	FVP	Section 1 – Biological parents
-----	-----	--------------------------------

N.A.	1.	Since the last UDS visit, is new information available concerning the status of the participant’s biological mother or father?	<input type="checkbox"/> 1 No (SKIP TO QUESTION 2) <input type="checkbox"/> 2 Yes (COMPLETE QUESTIONS 1a-1b)
------	----	--	---

For any parent with a neurological or psychiatric diagnosis, the entire row must be filled out.

If the clinician cannot determine the primary neurological/psychiatric diagnosis after reviewing all available evidence, enter **99 = Unknown** in the **Primary diagnosis** column, and *skip the subsequent questions in the row*. For a parent with no neurological or psychiatric diagnosis, enter **00 = No known neurological/psychiatric diagnosis** in the **Primary diagnosis** column, and then *skip the subsequent questions in the row*. For a parent with a primary diagnosis but no secondary diagnosis, enter **88 = No secondary diagnosis** in the Secondary diagnosis column.

Provide information on biological parents below. If birth year is unknown, please provide an approximate year on the Initial Visit Form A3 and ensure that it is consistently reported on any Follow-up Visit Form A3, as applicable. If it is impossible for the participant and co-participant to estimate the birth year, enter **9999=Unknown**.

For any biological parent with a neurological or psychiatric condition, the entire row must be filled out. If the clinician cannot determine the primary neurological problem/psychiatric condition after reviewing all available evidence, enter **99 = Unknown** in the **Primary diagnosis** column, and then skip the subsequent questions in the row. For a biological parent with no neurological or psychiatric problem, enter **00=No known neurological illness** in the **Primary diagnosis** column, and then skip the subsequent questions in the row.

			Birth year <i>(6666=provided at previous visit, 9999=Unknown)</i>	Age at death <i>(666=provided at previous visit, 888=N/A, 999= Unknown)</i>	Primary dx*	Secondary dx*	Method of evaluation**	Age of onset of primary dx <i>(666=provided at previous visit, 999 = Unknown)</i>
				 SEE LIST OF CODES			
1a.	1a.	Mother	_ _ _ _ _	_ _ _ _ _	_ _ _	_ _ _	_ _	_ _ _ _ _
1b.	1b.	Father	_ _ _ _ _	_ _ _ _ _	_ _ _	_ _ _	_ _	_ _ _ _ _

Codes

*DIAGNOSES

- 00 No known neurological/psychiatric diagnosis
- 01 Alzheimer's Disease
- 02 Lewy Body dementia (includes DLB and PDD)
- 03 Vascular dementia
- 04 Stroke
- 05 FTL* without motor neuron disease
- 06 FTL* with motor neuron disease
- 07 Motor Neuron Disease
- 08 Parkinson's Disease
- 09 Prion pathology
- 10 Psychiatric condition
- 11 Dementia of unknown etiology
- 12 Other
- 66 Provided at previous visit
- 88 No secondary diagnosis
- 99 Specific diagnosis unknown (*acceptable if method of evaluation is not by exam or autopsy*)

**METHOD OF EVALUATION

- 1 Participant/family report
- 2 Medical records
- 3 Exam
(*co-enrolled family members*)
- 4 Autopsy
(*if autopsy report available*)
- 6 Provided at previous visit

***FTLD includes:** *bvFTD or FTD, PPA (any subtype), CBS or CBD, PSP*

Abbreviations: *bvFTD = behavioral variant frontotemporal dementia, CBS = corticobasal syndrome, CBD = corticobasal degeneration, DLB = dementia with Lewy bodies, FTD = frontotemporal dementia, PDD = Parkinson's disease with dementia, PPA = primary progressive aphasia, PSP = progressive supranuclear palsy*

YEAR OF BIRTH FOR FULL SIBLINGS & BIOLOGICAL CHILDREN: If birth year is unknown, please provide an approximate year on **UDS Initial Visit Form A3** and **UDS Follow-up Visit Form A3** so that the sibling or child with unknown birth year ends up in correct birth order relative to the other siblings/children.

Example: *A participant is the oldest of three children. The participant was born in 1940 and the middle sibling in 1943; the youngest sibling's birth year is unknown. An approximate birth year of 1944 or later should be assigned to the youngest sibling.*

Use that same birth year on **FTLD Module Form A3a**, if applicable, and across all UDS visits so that any new information on a particular sibling or child can be linked to previously submitted information. If it is impossible for the participant and co-participant to estimate the birth year, enter **9999=Unknown**.

IVP FVP Section 2 – Full siblings

Only full siblings should be listed.

N.A. 2. Since the last UDS visit, is new information available concerning the status of the participant’s full siblings? 1 No (SKIP TO QUESTION 3) 2 Yes (COMPLETE QUESTIONS 2b-2u)

2. 2a. How many full siblings does the participant have?
 _____ (77 = participant adopted or siblings unknown; 66 = provided at previous visit)
 If participant has no full siblings, **SKIP TO QUESTION 3**; otherwise, provide information on all full siblings.

For any full sibling with a neurological or psychiatric diagnosis, the entire row must be filled out.

If the clinician cannot determine the primary neurological/psychiatric diagnosis after reviewing all available evidence, enter **99 = Unknown** in the **Primary diagnosis** column, and skip the subsequent questions in the row. For a full sibling with no neurological or psychiatric diagnosis, enter **00 = No known neurological/psychiatric diagnosis** in the **Primary diagnosis** column, and then skip the subsequent questions in the row. For a full sibling with a primary diagnosis but no secondary diagnosis, enter **88 = No secondary diagnosis** in the **Secondary diagnosis** column.

			Birth year <i>(6666=provided at previous visit, 9999=Unknown)</i>	Age at death <i>(666=provided at previous visit, 888=N/A, 999=Unknown)</i>	Primary dx*	Secondary dx*	Method of evaluation**	Age of onset of primary dx <i>(666=provided at previous visit, 999=Unknown)</i>

IVP FVP Section 3 – Biological children

N.A. 3. Since the last UDS visit, is new information available concerning the status of the participant’s biological children? 1 No (**END FORM HERE**)
 2 Yes (**COMPLETE QUESTIONS 3b-3p**)

3. 3a. How many biological children does the participant have?
 ____ (66 = provided at previous visit)
 If participant has no biological children, **END FORM HERE**; otherwise, provide information on all biological children.

For any biological child with a neurological or psychiatric diagnosis, the entire row must be filled out.

If the clinician cannot determine the primary neurological/psychiatric diagnosis after reviewing all available evidence, enter **99 = Unknown** in the **Primary diagnosis** column, and skip the subsequent questions in the row. For a biological child with no neurological or psychiatric diagnosis, enter **00 = No known neurological/psychiatric diagnosis** in the **Primary diagnosis** column, and then skip the subsequent questions in the row. For a biological child with a primary diagnosis but no secondary diagnosis, enter **88 = No secondary diagnosis** in the Secondary diagnosis column.

		Birth year <i>(6666=provided at previous visit, 9999=Unknown)</i>	Age at death <i>(666=provided at previous visit, 888=N/A, 999= Unknown)</i>	Primary dx*	Secondary dx*	Method of evaluation**	Age of onset of primary dx <i>(666=provided at previous visit, 999= Unknown)</i>

Appendix

1. Participant/family report

Family report should be coded when the co-participant for the family reports a participant as having been diagnosed with a particular disorder. In most cases, family report alone should not be used to assign any of the FTLD spectrum subtypes, or of parkinsonian disorders other than Parkinson's disease.

2. Medical records

Medical records should be from an examination that focused specifically on dementia; that was performed by a neurologist, geriatrician, or psychiatrist; and that includes a neurologic examination, an imaging study, and cognitive testing (e.g., MMSE, Blessed, or more formal tests). A telephone interview may also be used to collect additional information.

3. Examination

The participant must have been examined in person at your ADRC/institution or by genetic studies staff associated with your ADRC/institution to code as diagnosis by examination. Medical records may or may not have been used when assigning diagnosis.

4. Autopsy

If the autopsy was performed at an outside institution, you must have the report to code as diagnosis by autopsy.

Coding Guidebook for Form A4: Participant Medications

INSTRUCTIONS: This form is to be completed by the clinician or ADRC staff. The purpose of this form is to record all prescription medications taken by the participant within **the two weeks before the current visit**. If the participant is receiving any treatments known to significantly impact Alzheimer’s disease (AD) or Alzheimer’s disease related dementias (ADRD) biomarkers as part of their clinical care at the time of clinical assessment (e.g., they are receiving lecanemab infusions), the treatment should be included on both this form and the A4a ADRD–Specific Treatments form.

For prescription medications not listed here, please follow the instructions at the end of this form. OTC (non-prescription) medications need not be reported; however, a short list of medications that could be either prescription or OTC follows the prescription list.

Is the participant currently taking any medications? 0 No (**END FORM HERE**) 1 Yes

NOTE: The purpose of this form is to record all prescription medications taken by the participant within the two weeks before the current visit. Non-prescription (OTC) medications need not be reported; however, a short list of common OTC medications follows the prescription list. This form lists the 100 drugs most commonly reported by subjects in the UDS for the years 2015–2023. The drugs are ordered alphabetically by their generic names. If applicable, one or more commercial (brand) names are listed in parentheses.

MEDICATION NAME	RXNorm
<input type="checkbox"/> acetaminophen-HYDROcodone (Hycet, Vicodin)	214182

<input type="checkbox"/> vitamin E (Alpha E, Aquasol-E, Aquavite-E, Centrum Singles)	11256

For each medication, find and select the appropriate check box. If a reported drug is not on the list, enter the medication name on one of the lines listed as "Specify" at the end of the form. For all medications specified at the end of the Form, associated RXnorm codes must also be recorded. The RXnorm codes may be determined by using the RXNav tool located at <https://lhncbc.nlm.nih.gov/RxNav/>. In the rare case in which an RXCUI is not available in the RXNorm database, enter 0 for the RXCUI.

If a medication is not listed above:

Specify the drug or brand name and determine its RXNorm code by using the RXNav: <https://lhncbc.nlm.nih.gov/RxNav/>

Coding Guidebook for Form A4a: ADRD–Specific Treatments

INSTRUCTIONS: This form should be used to record treatments expected to significantly impact Alzheimer disease and related dementias (ADRD) biomarkers, whether a disease-modifying treatment that is FDA-approved for ADRD and received as part of clinical care or an investigational treatment received as part of a clinical trial. For treatments received as part of clinical care, only those that are FDA-approved for disease-modification of ADRD should be included on this form. If the participant is receiving one of these treatments as part of their clinical care at the time of clinical assessment (e.g., they are receiving lecanemab infusions), the treatment should be included on both this form and the A4 Medication form. Participation in any ADRD drug trial over an individual's lifetime should be included. If available, the ClinicalTrials.gov identifier should be entered into the "specific treatment and/or trial" cell. Information on the type of treatment can be found via ClinicalTrials.gov and is summarized in "Alzheimer's disease drug development pipeline." ¹ This form should be completed by the clinician based on participant interview and/or co-participant report. Check only one box per question, unless otherwise stated.

IVP FVP

Record all current and previous FDA-approved treatment(s) for disease-modification of ADRD (e.g., anti-amyloid antibodies) and/or trial(s) for investigational ADRD treatments. Review and update all information at each visit. For example, if a participant was in a trial and was blinded as to their treatment status on visit date 1, enter **Unknown** clinical trial group. If, at visit 2, the participant has entered an Open Label Extension and learned that they were in the placebo group, enter **Placebo** for the group on the first row, and **Active treatment** for the group on the second row, with appropriate start and end dates.

1.	1.	Has the participant ever been prescribed a treatment or been enrolled in a clinical trial of a treatment expected to modify ADRD biomarkers?	<input type="checkbox"/> 0 No (END FORM HERE) <input type="checkbox"/> 1 Yes <input type="checkbox"/> 9 Unknown (END FORM HERE)														
N/A	1a.	Since the last UDS visit, is new information available concerning any of the participant's prescribed treatments or clinical trial(s) of a treatment expected to modify ADRD biomarkers?	<input type="checkbox"/> 0 No (END FORM HERE) <input type="checkbox"/> 1 Yes <input type="checkbox"/> 9 Unknown (END FORM HERE)														
2.	2.	Please provide information about the clinical treatment(s) and/or trial(s) (If participant is exposed to more than two treatments and/or trials, use extended table on Page 2):															
		<table border="1"> <thead> <tr> <th>Primary Drug Target (check all that apply)</th> <th>Specific treatment and/or trial</th> <th>Start date (99/9999 =Unknown)</th> <th>End date (month/year) (99/9999=Unknown; 88/8888=Ongoing)</th> <th>How was the treatment provided?</th> <th>If clinical trial, in which group was the participant?</th> </tr> </thead> <tbody> <tr> <td> <input type="checkbox"/> 1 Amyloid beta <input type="checkbox"/> 1 Tau <input type="checkbox"/> 1 Inflammation <input type="checkbox"/> 1 Synaptic plasticity/ neuroprotection <input type="checkbox"/> 1 Other target(s) </td> <td>NCT-_____</td> <td></td> <td></td> <td> <input type="checkbox"/> 1 Clinical care <input type="checkbox"/> 2 Clinical trial <input type="checkbox"/> 3 Clinical care and clinical trial </td> <td> <input type="checkbox"/> 1 Active treatment <input type="checkbox"/> 2 Placebo <input type="checkbox"/> 9 Unknown </td> </tr> </tbody> </table>	Primary Drug Target (check all that apply)	Specific treatment and/or trial	Start date (99/9999 =Unknown)	End date (month/year) (99/9999=Unknown; 88/8888=Ongoing)	How was the treatment provided? Primary Drug Target (check all that apply)	Specific treatment and/or trial	Start date (99/9999 =Unknown)	End date (month/year) (99/9999=Unknown; 88/8888=Ongoing)	How was the treatment provided?	If clinical trial, in which group was the participant?												
<input type="checkbox"/> 1 Amyloid beta <input type="checkbox"/> 1 Tau <input type="checkbox"/> 1 Inflammation <input type="checkbox"/> 1 Synaptic plasticity/ neuroprotection <input type="checkbox"/> 1 Other target(s)	NCT-_____			<input type="checkbox"/> 1 Clinical care <input type="checkbox"/> 2 Clinical trial <input type="checkbox"/> 3 Clinical care and clinical trial	<input type="checkbox"/> 1 Active treatment <input type="checkbox"/> 2 Placebo <input type="checkbox"/> 9 Unknown												

Primary drug target: To find the primary drug target, see the "mechanism of action" in Table 2 from "[Alzheimer's disease drug development pipeline: 2024](#)" by Cummings.

Specific treatment and/or trial: See link above, use "Clinical trial NCT# from Table 2 or the clinicaltrials.gov website. If NCT is unknown, leave blank.

Start date: The first date that the drug was ever given (approximate month and year). If unknown, enter 99/9999.

End date: The last date that the drug was given; if currently on the treatment, enter 88/8888. If unknown, enter 99/9999.

How the treatment was provided? Clinical care is a treatment prescribed by a clinician for the patient's benefit; a clinical trial is registered and for research purposes.

If clinical trial, in which group was the participant? If the participant does not know whether they received the active treatment or placebo as part of a clinical trial, select **9=Unknown**.

¹ Cummings et al., "Alzheimer's disease drug development pipeline: 2024," Alzheimer's and Dementia. 2024 April 24; 10(2):e12465.

3.	3.	Has the participant ever experienced amyloid related imaging abnormalities–edema (ARIA-E), amyloid related imaging abnormalities–hemorrhage (ARIA-H), or other major adverse events associated with treatments expected to modify ADRD biomarkers?	<input type="checkbox"/> 0 No (END FORM HERE) <input type="checkbox"/> 1 Yes <input type="checkbox"/> 9 Unknown (END FORM HERE)
----	----	--	---

N/A	3a.	Since the last UDS visit, is new information available concerning the participant’s experience of amyloid related imaging abnormalities–edema (ARIA-E), amyloid related imaging abnormalities–hemorrhage (ARIA-H), or other major adverse events associated with treatments expected to modify ADRD biomarkers?	<input type="checkbox"/> 0 No (END FORM HERE) <input type="checkbox"/> 1 Yes <input type="checkbox"/> 9 Unknown (END FORM HERE)
-----	-----	---	---

Please include any ARIA-E or ARIA-H, regardless of symptoms or severity.

3a.	3b.	What major adverse events associated with treatments expected to modify ADRD biomarkers did they experience? <i>(check all that apply)</i>	1. <input type="checkbox"/> 1 Amyloid related imaging abnormalities–edema (ARIA-E) 2. <input type="checkbox"/> 1 Amyloid related imaging abnormalities–hemorrhage (ARIA-H)	3. <input type="checkbox"/> 1 Other issues _____ _____
-----	-----	---	---	--

Examples of major adverse events include ARIA-E, ARIA-H, cardiac rhythm abnormalities, liver dysfunction, hypotension, blood clots, kidney failure, severe skin rash, vision or ocular problems, and falls. These issues should be directly related to the treatments.

2.	2.	Please provide information about the clinical treatment(s) and/or trial(s) <i>(continued from Page 1):</i>			
Primary Drug Target <i>(check all that apply)</i>	Specific treatment and/or trial	Start date <i>(99/9999 =Unknown)</i>	End date <i>(month/year) (99/9999=Unknown; 88/8888=Ongoing)</i>	How was the treatment provided?	If clinical trial, in which group was the participant?

Coding Guidebook for Form A5-D2: Participant Health History / Clinician-assessed Medical Conditions

INSTRUCTIONS: This form is to be completed by the clinician or ADRC staff based on the medical history interview with the participant and co-participant, as well as review of any medical records that are available. Any conditions identified during the visit should be included on the form. Check only one box per question, unless otherwise stated.

IVP FVP Section 1 – Cigarette smoking, alcohol, and substance use

Cigarette smoking

Questions 1a to 1e should be coded based on cigarette smoking only, not cigar, pipe, vape (tobacco), or chewing tobacco.

1a.	1a.	Has the participant smoked <u>more than</u> 100 cigarettes in their life — (IF NO OR UNKNOWN, SKIP TO QUESTION 1f)	<input type="checkbox"/> 0 No	<input type="checkbox"/> 1 Yes	<input type="checkbox"/> 9 UNK
1b.	1b.	Total years smoked (77=years provided at previous UDS visit, 99 = Unknown)	— —		

If the exact number of years smoked is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **99=Unknown**.

1c.	1c.	Average number of packs smoked per day:	<input type="checkbox"/> 1 1 cigarette to less than ½ pack	<input type="checkbox"/> 4 1½ packs to less than 2 packs	
			<input type="checkbox"/> 2 ½ pack to less than 1 pack	<input type="checkbox"/> 5 2 packs or more	
			<input type="checkbox"/> 3 1 pack to less than 1½ packs	<input type="checkbox"/> 9 Unknown	
1d.	1d.	Has the participant smoked within <u>the last 30 days</u> ?	<input type="checkbox"/> 0 No	<input type="checkbox"/> 1 Yes	<input type="checkbox"/> 9 UNK
1e.	1e.	If the participant quit smoking, specify the age at which they last smoked (<i>i.e., quit</i>) (777 = age provided at previous UDS visit, 888 = N/A, 999 = unknown)	— — —		

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown**. If they still smoke, enter **888=N/A**.

Alcohol use

1f.	1f.	In the past 12 months, how often has the participant had a drink containing alcohol? (IF NEVER OR UNKNOWN, SKIP TO QUESTION 1i)	<input type="checkbox"/> 0 Never	<input type="checkbox"/> 3 2-3 times a week
			<input type="checkbox"/> 1 Monthly or less	<input type="checkbox"/> 4 4 or more times a week
			<input type="checkbox"/> 2 2-4 times a month	<input type="checkbox"/> 9 Unknown

This may be a drink containing any amount of alcohol, including less than the amount in the standard drink defined in Question 1g.

1g.	1g.	On a day when the participant drinks alcoholic beverages, how many standard drinks does the participant typically consume? (Standard drink: 12oz of regular beer, 5oz of wine, 1.5oz of distilled spirits)	<input type="checkbox"/> 1 1 or 2	<input type="checkbox"/> 4 7 to 9
			<input type="checkbox"/> 2 3 to 4	<input type="checkbox"/> 5 10 or more
			<input type="checkbox"/> 3 5 to 6	<input type="checkbox"/> 9 Unknown
1h.	1h.	In the past 12 months, how often did the participant have six or more drinks containing alcohol in one day?	<input type="checkbox"/> 0 Never	<input type="checkbox"/> 3 Weekly
			<input type="checkbox"/> 1 Less than once a month	<input type="checkbox"/> 4 Daily or almost daily
			<input type="checkbox"/> 2 Monthly	<input type="checkbox"/> 9 Unknown

Question 1h refers to “six or more standard drinks containing alcohol in one day.”

Substance use

1i.	1i.	Has the participant used substances including prescription or recreational drugs that caused significant impairment in one or more of the following areas: work, driving, legal, social, or others.
-----	-----	---

Question 1i is meant to capture substance use that caused significant impairment (not to simply capture any substance use that did not cause significant impairment). Include alcohol use that caused significant impairment.

1i1.	1i1.	Within the past 12 months	<input type="checkbox"/> 0 No	<input type="checkbox"/> 1 Yes	<input type="checkbox"/> 9 UNK
1i2.	1i2.	Prior to 12 months ago	<input type="checkbox"/> 0 No	<input type="checkbox"/> 1 Yes	<input type="checkbox"/> 9 UNK

1j.	1j.	In the past 12 months, how often has the participant consumed cannabis (<i>edibles, smoked, or vaporized</i>)?	<input type="checkbox"/> 0 Never	<input type="checkbox"/> 3 2-3 times a week
			<input type="checkbox"/> 1 Monthly or less	<input type="checkbox"/> 4 4 or more times a week
			<input type="checkbox"/> 2 2-4 times a month	<input type="checkbox"/> 9 Unknown

Question 1j should be answered based on any cannabis consumption independent of whether it caused significant impairment. Any cannabis derivatives (e.g., CBD, THC) should be included.

In the following sections (*pages 2-7*) record the presence or absence of a **history of these conditions**, as determined by the clinician’s best judgment following the medical history interview with the participant and co-participant, as well as review of any medical records that are available.

A CONDITION SHOULD BE CONSIDERED ...

Absent:	Recent/Active:	Remote/Inactive:	Unknown (UNK)
It has never been present.	It happened within the last year or still requires active management.	It existed or occurred in the past (<i>more than one year ago</i>) but was resolved or there is no treatment currently under way.	There is insufficient information available to assess this condition.

Section 2 – Cardiovascular disease

		ABSENT	RECENT/ACTIVE	REMOTE/INACTIVE	UNKNOWN
2a.	2a.	Heart attack (<i>heart artery blockage</i>) — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 2b)		<input type="checkbox"/> 0	<input type="checkbox"/> 1
				<input type="checkbox"/> 2	<input type="checkbox"/> 9

Myocardial infarction including STEMI (ST elevation myocardial infarction) and NSTEMI (non-ST elevation myocardial infarction). If myocardial infarction led to cardiac arrest, code both 2a and 2b. If myocardial infarction (troponin leak) was solely the consequence of cardiac arrest, code only 2b.

2a1.	2a1.	More than one heart attack?	<input type="checkbox"/> 0 No	<input type="checkbox"/> 1 Yes	<input type="checkbox"/> 9 UNK
------	------	-----------------------------	-------------------------------	--------------------------------	--------------------------------

2a2.	2a2.	Age at most recent heart attack (777 = age provided at previous UDS visit, 999 = Unknown)	_ _ _
------	------	--	-------

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 2a2.

2b.	2b.	Cardiac arrest (heart stopped) — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 2c)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	--	----------------------------	----------------------------	----------------------------	----------------------------

This refers to clinical cardiac arrest not asymptomatic pauses, bradycardia, or heart block.

2b1.	2b1.	Age at most recent cardiac arrest (777 = age provided at previous UDS visit, 999 = Unknown)	_ _ _
------	------	--	-------

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 2b1.

2c.	2c.	Atrial fibrillation	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	---------------------	----------------------------	----------------------------	----------------------------	----------------------------

Paroxysmal or chronic atrial fibrillation, including rate or rhythm-controlled.

2d.	2d.	Coronary artery angioplasty / endarterectomy / stenting	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	---	----------------------------	----------------------------	----------------------------	----------------------------

This does not include diagnostic coronary angiography without intervention.

2e.	2e.	Coronary artery bypass procedure — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 2f)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	--	----------------------------	----------------------------	----------------------------	----------------------------

2e1.	2e1.	Age at most recent surgery (777 = age provided at previous UDS visit, 999 = Unknown)	_ _ _
------	------	---	-------

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 2e1.

IVP	FVP	Section 2 – Cardiovascular disease	continued...
-----	-----	------------------------------------	--------------

2f.	2f.	Pacemaker and/or defibrillator implantation — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 2g)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₉
-----	-----	---	---------------------------------------	---------------------------------------	---------------------------------------	---------------------------------------

2f1.	2f1.	Age at first implantation (777 = age provided at previous UDS visit, 999 = Unknown)	_ _ _
------	------	--	-------

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 2f1.

2g.	2g.	Congestive heart failure (including pulmonary edema)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₉
-----	-----	--	---------------------------------------	---------------------------------------	---------------------------------------	---------------------------------------

American College of Cardiology (ACC) and American Heart Association (AHA) stage B, C, and D. Code left-sided, right-sided, and high-output heart failure.

2h.	2h.	Heart valve replacement or repair — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 2i)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₉
-----	-----	---	---------------------------------------	---------------------------------------	---------------------------------------	---------------------------------------

2h1.	2h1.	Age at most recent procedure (777 = age provided at previous UDS visit, 999 = Unknown)	_ _ _
------	------	---	-------

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 2h1.

2i.	2i.	Other cardiovascular disease (SPECIFY: _____)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₉
-----	-----	--	---------------------------------------	---------------------------------------	---------------------------------------	---------------------------------------

Ask whether the participant has any cardiovascular disease other than those listed in Questions 2a-2h. If no, select **0=Absent**. If yes, record the condition in the space provided and select the appropriate box to specify whether **1=Recent/active** or **2=Remote/inactive**.

Section 3 – Cerebrovascular disease

		ABSENT	RECENT/ACTIVE	REMOTE/ INACTIVE	UNKNOWN	
3a.	3a.	Stroke by history, not exam (<i>imaging is not required</i>) — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 3b)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₉

This question is focused on reported history of stroke. Include stroke reported during the interview with the participant and/or co-participant and/or medical record review. Imaging evidence of a stroke or evidence from a physical exam are not required as this question is focused on reported history. Include ischemic and hemorrhagic stroke.

3a1.	3a1.	More than one stroke?	<input type="checkbox"/> ₀ No	<input type="checkbox"/> ₁ Yes	<input type="checkbox"/> ₉ UNK
------	------	-----------------------	--	---	---

3a2.	3a2.	Age at most recent stroke (777 = age provided at previous UDS visit, 999 = Unknown)	_ _ _
------	------	--	-------

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 3a2.

		NEVER IMPROVED	PARTIALLY IMPROVED	IMPROVED / BACK TO NORMAL	UNKNOWN	
3a3.	3a3.	What is the status of stroke symptoms?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₉

3a4.	3a4.	Carotid artery surgery or stenting? (IF NO OR UNKNOWN, SKIP TO QUESTION 3b)	<input type="checkbox"/> ₀ No	<input type="checkbox"/> ₁ Yes	<input type="checkbox"/> ₉ UNK
------	------	---	--	---	---

3a5.	3a5.	Age at most recent carotid artery surgery or stenting (777 = age provided at previous UDS visit, 999 = Unknown)	_ _ _
------	------	--	-------

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 3a5.

IVP	FVP		ABSENT	RECENT/ACTIVE	REMOTE/ INACTIVE	UNKNOWN
3b.	3b.	Transient ischemic attack (TIA) — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 4a)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9

Do not code transient global amnesia here. Code convincing (by history and/or medical record review) TIAs with typical TIA symptoms (such as aphasia, unilateral weakness or numbness, incoordination, amnesia fugax) and duration (less than 24 hours). Be aware that it is common for participants or co-participants to self-diagnose TIAs based on vague symptoms that are solely cognitive or non-focal neurologically, which the clinician may not necessarily code here as TIAs.

3b1.	3b1.	Age at most recent TIA (777 = age provided at previous UDS visit, 999 = Unknown)	___	___	___	___
------	------	---	-----	-----	-----	-----

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 3b1.

Section 4 – Neurologic conditions

			ABSENT	RECENT/ACTIVE	REMOTE/ INACTIVE	UNKNOWN
4a.	4a.	Parkinson's disease (PD) — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 4b)	<input type="checkbox"/> 0	<input type="checkbox"/> 1		<input type="checkbox"/> 9

Parkinson's disease, sporadic or genetic. Do not include with parkinsonism who do not meet the criteria for Parkinson's disease. See 4b.

4a1.	4a1.	Age at estimated PD symptom onset (777 = age provided at previous UDS visit, 999 = Unknown)	___	___	___	___
------	------	--	-----	-----	-----	-----

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 4a1.

4b.	4b.	Other parkinsonism disorder (e.g., DLB) — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 4c)	<input type="checkbox"/> 0	<input type="checkbox"/> 1		<input type="checkbox"/> 9
-----	-----	---	----------------------------	----------------------------	--	----------------------------

Include Dementia with Lewy Bodies, vascular parkinsonism, drug-induced parkinsonism, other secondary parkinsonism, progressive supranuclear palsy, multiple system atrophy.

4b1.	4b1.	Age at parkinsonism disorder diagnosis (777 = age provided at previous UDS visit, 999 = Unknown)	___	___	___	___
------	------	---	-----	-----	-----	-----

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 4b1.

4c.	4c.	Epilepsy and/or history of seizures (excluding childhood febrile seizures) — (IF REMOTE/INACTIVE, SKIP TO QUESTION 4c2, IF ABSENT OR UNKNOWN, SKIP TO QUESTION 4d)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	---	----------------------------	----------------------------	----------------------------	----------------------------

4c1.	4c1.	Age at first seizure (excluding childhood febrile seizures) (777 = age provided at previous UDS visit, 999 = Unknown)	___	___	___	___
------	------	---	-----	-----	-----	-----

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 4c1.

4c2.	4c2.	How many seizures has the participant had in the past 12 months?	<input type="checkbox"/> 0 None	<input type="checkbox"/> 1 1 or 2	<input type="checkbox"/> 2 3 or more	<input type="checkbox"/> 9 Unknown
------	------	--	---------------------------------	-----------------------------------	--------------------------------------	------------------------------------

4d.	4d.	Chronic headaches	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	-------------------	----------------------------	----------------------------	----------------------------	----------------------------

International Headache Society definition of chronic headaches: 15 or more headache episodes per month for at least 3 months.

4e.	4e.	Multiple sclerosis	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	--------------------	----------------------------	----------------------------	----------------------------	----------------------------

4f.	4f.	Normal-pressure hydrocephalus	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	-------------------------------	----------------------------	----------------------------	----------------------------	----------------------------

Participants should meet clinical criteria for NPH as well as radiologic evidence for NPH.

4g. **4g.** Repetitive head impacts (e.g. from contact sports, intimate partner violence, or military duty), regardless of whether it caused symptoms. 0 No 1 Yes 9 UNK
(IF NO OR UNKNOWN, SKIP TO QUESTION 4h)

If the participant played a contact sport or served in the military but did not have known or suspected repetitive head impacts, code "no." Include military blast exposure.

4g1. **4g1.** Indicate the source(s) of exposure for repeated hits to the head:
(Check all that apply)

4g1a. 1 American football
4g1b. 1 Soccer
4g1c. 1 Ice hockey
4g1d. 1 Boxing or mixed martial arts
4g1e. 1 Other contact sport
4g1f. 1 Intimate partner violence
4g1g. 1 Military service
4g1h. 1 Physical assault
4g1i. 1 Other (SPECIFY): _____

4g2. **4g2.** Indicate the total length of time in years that the participant was exposed to repeated hits to the head
(e.g. playing American football for 7 years) **(777 = years provided at previous UDS visit, 999 = Unknown)** _ _ _

If the exact length of time is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 4g2.

4h. **4h.** Head injury *(e.g. in a vehicle accident, being hit by an object, in a fall, while playing sports or biking, in an assault, or during military service)* that resulted in a period of feeling "dazed or confused," being unable to recall details of the injury, or loss of consciousness *(if multiple head injuries, consider most severe episode)*. 0 No 1 Yes 9 UNK
(IF NO OR UNKNOWN, SKIP TO QUESTION 5a)

4h1. **4h1.** After a head injury, what was the longest period of time that the participant was unconscious?

0 Less than 5 minutes 4 7 days or more
 1 5 minutes to less than 30 minutes 8 Not applicable, no loss of consciousness
 2 30 minutes to less than 24 hours 9 Unknown duration
 3 1 day to less than 7 days

4h2. **4h2.** After a head injury, what was the longest period that the participant was "dazed or confused" or unable to recall details of the injury?

0 Less than 5 minutes 4 7 days or more
 1 5 minutes to less than 30 minutes 8 Not applicable, never dazed and confused
 2 30 minutes to less than 24 hours 9 Unknown duration
 3 1 day to less than 7 days

4h3. **4h3.** Total number of head injuries in which the participant felt "dazed or confused", unable to recall details of the injury or experienced loss of consciousness?

0 None 3 6-12
 1 1-2 4 13 or more
 2 3-5 9 Unknown

4h4. **4h4.** Age of first head injury that resulted in a period of feeling "dazed or confused," being unable to recall details of the injury, or loss of consciousness: **(777 = age provided at previous UDS visit, 999 = Unknown)** _ _ _

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 4h4.

4h5. **4h5.** Age of most recent head injury that resulted in a period of feeling "dazed or confused," being unable to recall details of the injury, or loss of consciousness: **(777 = age provided at previous UDS visit, 999 = Unknown)** _ _ _

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 4h5. If only one head injury, enter the same age for 4h4 and 4h5.

IVP FVP Section 5 – Medical conditions

If any of the conditions still require active management and/or medications, please select “Recent / Active.”

			ABSENT	RECENT/ACTIVE	REMOTE/ INACTIVE	UNKNOWN
5a.	5a.	Diabetes — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 5b)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
5a1.	5a1.	Which type?	<input type="checkbox"/> 1 Type 1 <input type="checkbox"/> 2 Type 2 <input type="checkbox"/> 3 Other (diabetes insipidus, latent autoimmune diabetes/type 1.5, gestational diabetes, prediabetes) <input type="checkbox"/> 9 Unknown			

Code prediabetes as **3=Other**.

5a2.	5a2.	Treated with (Check all that apply)	5a2a.	<input type="checkbox"/> 1 Insulin	5a2b.	<input type="checkbox"/> 1 Oral medications	5a2c.	<input type="checkbox"/> 1 GLP-1 receptor activators	5a2d.	<input type="checkbox"/> 1 Other non-insulin, non-GLP-1 receptor activator injection	5a2e.	<input type="checkbox"/> 1 Diet	5a2f.	<input type="checkbox"/> 1 Unknown
------	------	--	-------	------------------------------------	-------	---	-------	--	-------	--	-------	---------------------------------	-------	------------------------------------

GLP-1 receptor activators (injection or oral) such as semaglutide (Ozempic).

5a3.	5a3.	Age at diabetes diagnosis (777 = age provided at previous UDS visit, 999 = Unknown)	___	___	___
------	------	---	-----	-----	-----

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 5a3.

5b.	5b.	Hypertension (or taking medication for hypertension) — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 5c)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	--	----------------------------	----------------------------	----------------------------	----------------------------

5b1.	5b1.	Age at hypertension diagnosis (777 = age provided at previous UDS visit, 999 = Unknown)	___	___	___
------	------	---	-----	-----	-----

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 5b1.

5c.	5c.	Hypercholesterolemia (or taking medication for high cholesterol) — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 5d)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	--	----------------------------	----------------------------	----------------------------	----------------------------

5c1.	5c1.	Age at hypercholesterolemia diagnosis (777 = age provided at previous UDS visit, 999 = Unknown)	___	___	___
------	------	---	-----	-----	-----

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 5c1.

5d.	5d.	B12 deficiency	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	----------------	----------------------------	----------------------------	----------------------------	----------------------------

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 5r1.

5s.	5s.	Human Immunodeficiency Virus (HIV) — (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 5t)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
------------	------------	--	----------------------------	----------------------------	----------------------------	----------------------------

5s1. 5s1. Age at diagnosis (**777 = age provided at previous UDS visit, 999 = Unknown**) _ _ _

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **999=Unknown** for Question 5s1.

5t.	5t.	Other medical conditions or procedures (SPECIFY): _____	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
------------	------------	---	----------------------------	----------------------------	----------------------------	----------------------------

Ask whether the participant has any medical condition or procedure other than those listed in Questions 5m–5s. If no, select **0=Absent**. If yes, record the condition in the space provided and select the appropriate box to specify whether **1=Recent/active** or **2=Remote/inactive**. It is left to the discretion of the investigator to report other potentially important medical conditions or procedures.

IVP FVP Section 6 – Psychiatric conditions

*In order to diagnose a disorder, **DSM-5-TR criteria require** that symptoms cause clinically significant distress or impairment in social, occupational, or other important areas of functioning.

			ABSENT	RECENT/ACTIVE	REMOTE/ INACTIVE	UNKNOWN
6a.	6a.	Depressive disorder				
6a1.	6a1.	Major depressive disorder (DSM-5-TR criteria*)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
6a2.	6a2.	Other specified depressive disorder (DSM-5-TR criteria*)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9

Examples of other specified depressive disorders include: persistent depressive disorder (previously known as dysthymia), premenstrual dysphoric disorder (PMDD), substance/medication-induced depressive disorder, and depressive disorder due to another medical condition.

6a3.	6a3.	If Recent/Active depressive disorder (Q6a1 or Q6a2), choose if treated or untreated.	<input type="checkbox"/> 0 Untreated	<input type="checkbox"/> 1 Treated with medication and/or counseling		
------	------	--	--------------------------------------	--	--	--

May also code treatment with electroconvulsive therapy or transcranial magnetic stimulation as **1=Treated**. Do **not** code self-treatment with vitamins, herbs, supplements, recreational drugs, or alcohol as **1=Treated**.

6b.	6b.	Bipolar disorder (DSM-5-TR criteria*)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
6c.	6c.	Schizophrenia or other psychosis disorder (DSM-5-TR criteria*)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
6d.	6d.	Anxiety disorder (DSM-5-TR criteria*) (IF ABSENT OR UNKNOWN, SKIP TO QUESTION 6e)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9

Anxiety disorder should only be selected if DSM-5-TR criteria are met. See criteria for specific anxiety disorders below.

6d1.	6d1.	Generalized Anxiety Disorder	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
6d2.	6d2.	Panic Disorder	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
6d3.	6d3.	Obsessive–compulsive disorder (OCD)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
6d4.	6d4.	Other (SPECIFY): _____	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9

Ask whether the participant has any anxiety disorder other than those listed in Questions 6d1–6d3. If no, select **0=Absent**. If yes, record the condition in the space provided and select the appropriate box to specify whether **1=Recent/active** or **2=Remote/inactive**.

6e.	6e.	Post-traumatic stress disorder (PTSD) (DSM-5-TR criteria*)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
6f.	6f.	Developmental neuropsychiatric disorders (e.g., autism spectrum disorder [ASD], attention-deficit hyperactivity disorder [ADHD], dyslexia)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9

Down syndrome is appropriate to code here if associated with a developmental neuropsychiatric disorder.

6g.	6g.	Other psychiatric disorders (SPECIFY): _____	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 9
-----	-----	--	----------------------------	----------------------------	----------------------------	----------------------------

Ask whether the participant has any psychiatric disorder other than those listed in Questions 6a–6f. If no, select **0=Absent**. If yes, record the condition in the space provided and select the appropriate box to specify whether **1=Recent/active** or **2=Remote/inactive**.

Section 7 – Menstrual and reproductive health

If questions about menstrual and reproductive health are relevant to this participant, continue to question 7a. Otherwise, **END FORM HERE**.

7a.	N.A.	How old was the participant when they had their first menstrual period? (88 = Never had a menstrual period, 99 = Unknown) — (IF NEVER HAD A MENSTRUAL PERIOD, SKIP TO 7d)	___	___
-----	------	---	-----	-----

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **99=Unknown** for Question 7a.

7b. **7a.** How old was the participant when they had their last menstrual period?
(77 = age provided at previous UDS visit, 88 = Still menstruating, 99 = Unknown) —
(IF STILL MENSTRUATING, SKIP TO QUESTION 7d) __ __

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **99=Unknown** for Question 7b.

7c. **7b.** If the participant has stopped having menstrual periods, please indicate the reason.
(Check all that apply)

1. 1 Natural menopause
2. 1 Hysterectomy (surgical removal of uterus)
3. 1 Surgical removal of both ovaries
4. 1 Chemotherapy for cancer or another condition
5. 1 Radiation treatment or other damage/injury to reproductive organs
6. 1 Hormonal supplements (e.g. the Pill, injections, Mirena, HRT)
7. 1 Anti-estrogen medication such as Tamoxifen, anastrozole (Arimidex), exemestane (Aromasin), or letrozole (Femara)
8. 1 Unsure
9. 1 Other (SPECIFY): _____

7d. **7c.** Has the participant taken female hormone replacement pills or patches (e.g. estrogen)? **(IF NO OR UNKNOWN, SKIP TO QUESTION 7e)**

0 No 1 Yes 9 UNK

Do not include topical or intravaginal hormone gel or cream.

7d1. **7c1.** How many years in total? **(77 = years provided at previous UDS visit, 99 = Unknown)** __ __

If the exact number of years is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **99=Unknown** for Question 7d1.

7d2. **7c2.** Age at first use **(77 = age provided at previous UDS visit, 99 = Unknown)** __ __

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **99=Unknown** for Question 7d2.

7d3. **7c3.** Age at last use **(77 = age provided at last UDS visit, 88= Still presently using, 99 = Unknown)** __ __

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **99=Unknown** for Question 7d3.

7e. **7d.** Has the participant ever taken birth control pills?
(IF NO OR UNKNOWN, END FORM HERE)

0 No 1 Yes 9 UNK

7e1. **7d1.** How many years in total? **(77 = years provided at previous UDS visit, 99 = Unknown)** __ __

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **99=Unknown** for Question 7e1.

7e2. **7d2.** Age at first use **(77 = age provided at previous UDS visit, 99 = Unknown)** __ __

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **99=Unknown** for Question 7e2.

7e3. **7d3.** Age at last use **(77 = age provided at previous UDS visit, 88= Still presently using, 99 = Unknown)** __ __

If the exact age is unknown, ask the participant and/or co-participant to estimate. If they cannot estimate, enter **99=Unknown** for Question 7e3.

Coding Guidebook for Form B1: EVALUATION FORM – Vital Signs and Anthropometrics

INSTRUCTIONS: This form is to be completed by the clinician or appropriately trained research personnel.

IVP FVP Section 1 – Participant vital signs and anthropometrics

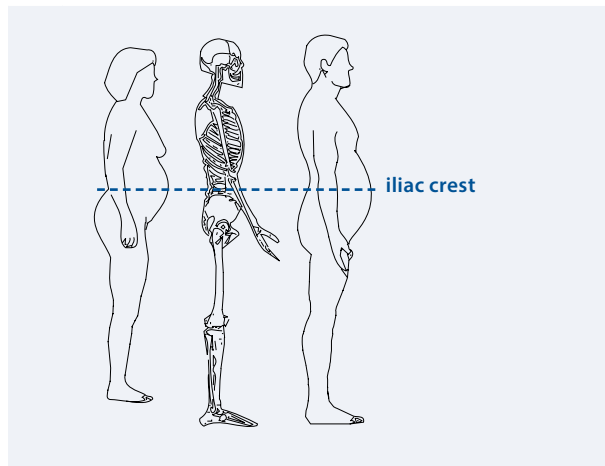

1.	1.	Participant height (inches)	_ _ . _	(88.8 = not assessed)
----	----	-----------------------------	---------	-----------------------

If height cannot be measured (e.g., if subject is confined to a wheelchair or unable to stand), enter **88.8=Not assessed**.

2.	2.	Participant weight (lbs.)	_ _ _	(888 = not assessed)
----	----	---------------------------	-------	----------------------

If weight cannot be measured (e.g., if subject is confined to a wheelchair or unable to stand), enter **888=Not assessed**.

Instructions for measuring waist and hip circumference in adults

Waist circumference should be measured at the midpoint between the lower margin of the last palpable rib and the top of the iliac crest, using a stretch resistant tape. **Hip circumference** should be measured around the widest portion of the buttocks, with the tape parallel to the floor.

For both measurements: Participant should stand with feet close together, arms at the side and body weight evenly distributed, and should wear little clothing. The participant should be relaxed, and the measurements should be taken at the end of a normal expiration. Each measurement should be taken twice and entered here. If the difference between the two measurements exceeds 0.5 inches, the two measurements should be repeated.

Source: Waist circumference and waist-hip ratio: report of a WHO expert consultation, Geneva, 8-11 December 2008.

Source: NHLBI Obesity Education Initiative, nhlbi.nih.gov

3.	3.	Enter two waist circumference measurements (inches):		
		• Measurement 1	_ _ _	(888 = not assessed)
		• Measurement 2	_ _ _	(888 = not assessed)

4.	4.	Enter two hip circumference measurements (inches):		
		• Measurement 1	_ _ _	(888 = not assessed)
		• Measurement 2	_ _ _	(888 = not assessed)

5.	5.	Enter two readings spaced at least one minute apart for each arm. <i>See detailed instructions below.</i>		
----	----	--	--	--

5a.	5a.	Participant blood pressure - Left arm:		
		• Reading 1	_ _ _ / _ _ _	(888/888 = not assessed)
		• Reading 2	_ _ _ / _ _ _	(888/888 = not assessed)

5b.	5b.	Participant blood pressure - Right arm:	
		• Reading 1	___ ___ / ___ ___ (888/888= not assessed)
		• Reading 2	___ ___ / ___ ___ (888/888= not assessed)
6.	6.	Participant resting heart rate (<i>pulse</i>)	___ ___ ___ (888= not assessed)

If pulse cannot be obtained, enter **888=Not assessed**.

Steps for proper blood pressure measurement

STEP 1 - Properly prepare the participant:

- Have the participant relax, sitting in a chair (*feet on floor, back supported*) for >5 minutes
- The participant should avoid caffeine, exercise, and smoking for at least 30 minutes before measurement.
- Ensure that participant has emptied his/her bladder.
- Neither the participant nor the observer should talk during the rest period or during the measurement.
- Remove all clothing covering the location of cuff placement.
- Measurements made while the participant is sitting or lying on an examining table do not fulfill these criteria.

STEP 2 - Use proper technique for BP measurements

- Use a BP measurement device that has been validated and ensure that the device is calibrated periodically.
- Support the participant's arm (*e.g., have it resting on a desk*).
- Position the middle of the cuff on the participant's upper arm at the level of the right atrium (*midpoint of the sternum*).
- Use the correct cuff size, such that the bladder encircles 80% of the arm, and note if a larger- or smaller-than-normal cuff size is used.
- Either the stethoscope diaphragm or bell may be used for auscultatory readings.

STEP 3 - Take proper measurements

- Take two BP readings in both arms.
- Separate the second set of measurements from the first by one minute.
- For auscultatory determinations, use a palpated estimate of radial pulse obliteration pressure to estimate SBP. Inflate the cuff 20-30 mm Hg above this level for an auscultatory determination of the BP level.
- For auscultatory readings, deflate the cuff pressure 2 mm Hg per second, and listen for Korotkoff sounds.

STEP 4 - Properly document accurate BP readings

- Record SBP and DBP. If using the auscultatory technique, record SBP and DBP as onset of the first Korotkoff sound and disappearance of all Korotkoff sounds, respectively, using the nearest even number.
- Record the two readings of SBP and DBP in the left arm, and the two readings of SBP and DBP in the right arm.

STEP 5 - Give BP readings and interpretation to the participants

- It is recommended to provide participants with the SBP/DBP readings both orally, and in writing.

Source: Checklist for accurate measurement of BP adapted from AHA Guidelines, Whelton PK et al., *Hypertension*. 2018; 71: e13-e11.

Coding Guidebook for Form B3: Unified Parkinson's Disease Rating Scale (UPDRS¹) —Motor Exam

INSTRUCTIONS: This form is to be completed by the clinician or other trained health professional. The motor exam should be administered to all participants. Clinician should record results as observed regardless of whether there are non-parkinsonian contributions or explanations for the findings. This form is intended to 1) determine the degree of parkinsonism on any visit, and 2) track the degree of parkinsonism over time. The UPDRS is not intended to establish the presence or absence of parkinsonism. For additional clarification and scoring instructions, see **UDS Coding Guidebook for Form B3**. Check only one box per question.

For video-recorded examples of administration, see Perlmutter JS. Assessment of Parkinson disease manifestations. Curr Protoc Neurosci. 2009 Oct; Chapter 10: Unit10.1. doi: 10.1002/0471142301.ns1001s49.

This form is to be completed only when an in-person encounter has occurred, and a comprehensive neurologic examination has been performed. Do not complete this form if the encounter was conducted via phone or video.

IVP	FVP	<input type="checkbox"/> (Optional) If the clinician completes the UPDRS examination and determines all items are normal, check this box. If this box is checked, all items will default to 0 in the database.

Right hand	<input type="checkbox"/> 0 Absent <input type="checkbox"/> 1 Slight; present with action <input type="checkbox"/> 2 Moderate in amplitude, present with action <input type="checkbox"/> 3 Moderate in amplitude with posture holding as well as action <input type="checkbox"/> 4 Marked in amplitude; interferes with feeding <input type="checkbox"/> 8 Untestable (SPECIFY): _____
------------	------------	-------------------	---

4b.	4b.	Left hand	<input type="checkbox"/> 0 Absent <input type="checkbox"/> 1 Slight; present with action <input type="checkbox"/> 2 Moderate in amplitude, present with action <input type="checkbox"/> 3 Moderate in amplitude with posture holding as well as action <input type="checkbox"/> 4 Marked in amplitude; interferes with feeding <input type="checkbox"/> 8 Untestable (SPECIFY): _____
------------	------------	------------------	---

5. Rigidity

(judged on passive movement of major joints with participant relaxed in sitting position; cogwheeling to be ignored)

5a.	5a.	Neck	<input type="checkbox"/> 0 Absent <input type="checkbox"/> 1 Slight or detectable only when activated by mirror or other movements <input type="checkbox"/> 2 Mild to moderate <input type="checkbox"/> 3 Marked, but full range of motion easily achieved <input type="checkbox"/> 4 Severe; range of motion achieved with difficulty <input type="checkbox"/> 8 Untestable (SPECIFY): _____
------------	------------	-------------	---

5b.	5b.	Right upper extremity	<input type="checkbox"/> 0 Absent <input type="checkbox"/> 1 Slight or detectable only when activated by mirror or other movements <input type="checkbox"/> 2 Mild to moderate <input type="checkbox"/> 3 Marked, but full range of motion easily achieved <input type="checkbox"/> 4 Severe; range of motion achieved with difficulty <input type="checkbox"/> 8 Untestable (SPECIFY): _____
------------	------------	------------------------------	---

5c.	5c.	Left upper extremity	<input type="checkbox"/> 0 Absent <input type="checkbox"/> 1 Slight or detectable only when activated by mirror or other movements <input type="checkbox"/> 2 Mild to moderate <input type="checkbox"/> 3 Marked, but full range of motion easily achieved <input type="checkbox"/> 4 Severe; range of motion achieved with difficulty <input type="checkbox"/> 8 Untestable (SPECIFY): _____
------------	------------	-----------------------------	---

5d.	5d.	Right lower extremity	<input type="checkbox"/> 0 Absent <input type="checkbox"/> 1 Slight or detectable only when activated by mirror or other movements <input type="checkbox"/> 2 Mild to moderate <input type="checkbox"/> 3 Marked, but full range of motion easily achieved <input type="checkbox"/> 4 Severe; range of motion achieved with difficulty <input type="checkbox"/> 8 Untestable (SPECIFY): _____
------------	------------	------------------------------	---

5e.	5e.	Left lower extremity	<input type="checkbox"/> 0 Absent <input type="checkbox"/> 1 Slight or detectable only when activated by mirror or other movements <input type="checkbox"/> 2 Mild to moderate <input type="checkbox"/> 3 Marked, but full range of motion easily achieved <input type="checkbox"/> 4 Severe; range of motion achieved with difficulty <input type="checkbox"/> 8 Untestable (SPECIFY): _____
------------	------------	-----------------------------	---

IVP FVP 6. Finger taps
(participant taps thumb with index finger in rapid succession)

6a.	6a.	Right hand	<input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Mild slowing and/or reduction in amplitude <input type="checkbox"/> 2 Moderately impaired; definite and early fatiguing; may have occasional arrests in movement <input type="checkbox"/> 3 Severely impaired; frequent hesitation in initiating movements or arrests in ongoing movement <input type="checkbox"/> 4 Can barely perform the task. <input type="checkbox"/> 8 Untestable (SPECIFY): _____
6b.	6b.	Left hand	<input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Mild slowing and/or reduction in amplitude <input type="checkbox"/> 2 Moderately impaired; definite and early fatiguing; may have occasional arrests in movement <input type="checkbox"/> 3 Severely impaired; frequent hesitation in initiating movements or arrests in ongoing movement <input type="checkbox"/> 4 Can barely perform the task. <input type="checkbox"/> 8 Untestable (SPECIFY): _____

7. Hand movements
(participant opens and closes hands in rapid succession)

7a.	7a.	Right hand	<input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Mild slowing and/or reduction in amplitude <input type="checkbox"/> 2 Moderately impaired; definite and early fatiguing; may have occasional arrests in movement <input type="checkbox"/> 3 Severely impaired; frequent hesitation in initiating movements or arrests in ongoing movement <input type="checkbox"/> 4 Can barely perform the task. <input type="checkbox"/> 8 Untestable (SPECIFY): _____
7b.	7b.	Left hand	<input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Mild slowing and/or reduction in amplitude <input type="checkbox"/> 2 Moderately impaired; definite and early fatiguing; may have occasional arrests in movement <input type="checkbox"/> 3 Severely impaired; frequent hesitation in initiating movements or arrests in ongoing movement <input type="checkbox"/> 4 Can barely perform the task. <input type="checkbox"/> 8 Untestable (SPECIFY): _____

8. Rapid alternating movements of hands
(pronation-supination movements of hands, vertically and horizontally, with as large an amplitude as possible, both hands simultaneously)

8a.	8a.	Right hand	<input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Mild slowing and/or reduction in amplitude <input type="checkbox"/> 2 Moderately impaired; definite and early fatiguing; may have occasional arrests in movement <input type="checkbox"/> 3 Severely impaired; frequent hesitation in initiating movements or arrests in ongoing movement <input type="checkbox"/> 4 Can barely perform the task. <input type="checkbox"/> 8 Untestable (SPECIFY): _____
8b.	8b.	Left hand	<input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Mild slowing and/or reduction in amplitude <input type="checkbox"/> 2 Moderately impaired; definite and early fatiguing; may have occasional arrests in movement <input type="checkbox"/> 3 Severely impaired; frequent hesitation in initiating movements or arrests in ongoing movement <input type="checkbox"/> 4 Can barely perform the task. <input type="checkbox"/> 8 Untestable (SPECIFY): _____

IVP	FVP	9. Leg agility <i>(participant taps heel on the ground in rapid succession, picking up entire leg; amplitude should be at least 3 inches)</i>
9a.	9a.	Right leg <input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Mild slowing and/or reduction in amplitude <input type="checkbox"/> 2 Moderately impaired; definite and early fatiguing; may have occasional arrests in movement <input type="checkbox"/> 3 Severely impaired; frequent hesitation in initiating movements or arrests in ongoing movement <input type="checkbox"/> 4 Can barely perform the task. <input type="checkbox"/> 8 Untestable (SPECIFY): _____
9b.	9b.	Left leg <input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Mild slowing and/or reduction in amplitude <input type="checkbox"/> 2 Moderately impaired; definite and early fatiguing; may have occasional arrests in movement <input type="checkbox"/> 3 Severely impaired; frequent hesitation in initiating movements or arrests in ongoing movement <input type="checkbox"/> 4 Can barely perform the task. <input type="checkbox"/> 8 Untestable (SPECIFY): _____
10.	10.	Arising from chair <i>(participant attempts to rise from a straight-backed chair, with arms folded across chest)</i> <input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Slow; or may need more than one attempt <input type="checkbox"/> 2 Pushes self up from arms of seat. <input type="checkbox"/> 3 Tends to fall back and may have to try more than one time, but can get up without help <input type="checkbox"/> 4 Unable to arise without help <input type="checkbox"/> 8 Untestable (SPECIFY): _____
11.	11.	Posture <input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Not quite erect, slightly stooped posture; could be normal for older person <input type="checkbox"/> 2 Moderately stooped posture, definitely abnormal; can be slightly leaning to one side <input type="checkbox"/> 3 Severely stooped posture with kyphosis; can be moderately leaning to one side <input type="checkbox"/> 4 Marked flexion with extreme abnormality of posture <input type="checkbox"/> 8 Untestable (SPECIFY): _____
12.	12.	Gait <input type="checkbox"/> 0 Normal <input type="checkbox"/> 1 Walks slowly; may shuffle with short steps, but no festination (hastening steps) or propulsion <input type="checkbox"/> 2 Walks with difficulty, but requires little or no assistance; may have some festination, short steps, or propulsion <input type="checkbox"/> 3 Severe disturbance of gait requiring assistance <input type="checkbox"/> 4 Cannot walk at all, even with assistance <input type="checkbox"/> 8 Untestable (SPECIFY): _____
13.	13.	Posture stability <i>(response to sudden, strong posterior displacement produced by pull on shoulders while participant erect with eyes open and feet slightly apart; participant is prepared)</i> <input type="checkbox"/> 0 Normal erect <input type="checkbox"/> 1 Retropulsion, but recovers unaided <input type="checkbox"/> 2 Absence of postural response; would fall if not caught by examiner <input type="checkbox"/> 3 Very unstable, tends to lose balance spontaneously <input type="checkbox"/> 4 Unable to stand without assistance <input type="checkbox"/> 8 Untestable (SPECIFY): _____
14.	14.	Body bradykinesia and hypokinesia <i>(combining slowness, hesitancy, decreased arm swing, small amplitude, and poverty of movement in general)</i> <input type="checkbox"/> 0 None <input type="checkbox"/> 1 Minimal slowness, giving movement a deliberate character; could be normal for some persons; possibly reduced amplitude <input type="checkbox"/> 2 Mild degree of slowness and poverty of movement which is definitely abnormal; alternatively, some reduced amplitude <input type="checkbox"/> 3 Moderate slowness, poverty or small amplitude of movement <input type="checkbox"/> 4 Marked slowness, poverty or small amplitude of movement <input type="checkbox"/> 8 Untestable (SPECIFY): _____
15.	15.	Total UPDRS Score <i>(If one or more items are checked "8=Untestable", enter 888)</i> ____ ____ ____ (0-108, 888)

If any of Q1-Q14 are checked **8=Untestable**, enter 888; else sum up responses for Q1-Q14. The total will be calculated automatically if using electronic data capture.

Coding Guidebook for Form B4: CDR® Dementia Staging Instrument

PLUS NACC FTLD Behavior & Language Domains (CDR® Plus NACC FTLD)

INSTRUCTIONS: *This form is to be completed by the clinician or other trained health professional, based on co-participant report and behavioral and neurological exam of the participant. In the extremely rare instances when no co-participant is available, the clinician or other trained health professional must complete this form using all other available information and his/her best clinical judgment. Score only as decline from previous level due to cognitive loss, not impairment due to other factors, such as physical disability.*

The Washington University ADRC provides a CDR training website for ADRC personnel. This CDR training is required and may be accessed online at <https://knightadrc.wustl.edu/cdr-training-application/>

Use all information and make the best judgment. Score each category as independently as possible. Select only one box for each category, rating impairment as decline from the person's usual level due to cognitive loss alone, not impairment due to other factors such as physical disability. Occasionally, the evidence is ambiguous and the clinician's best judgment is that a category could be rated in either one of two adjacent boxes, such as **1=Mild** or **2=Moderate** impairment. In that situation, the standard procedure is to select the box of greater impairment.

Aphasia is taken into account by assessing both language and non-language function in each cognitive category. If aphasia is present to a greater degree than the general dementia, the participant is rated according to the general dementia. Supply evidence of non-language cognitive function.

A box score of 0 for Memory (**M=0**) applies to participants who, in the clinician's judgment, have no memory impairment or have inconsistent slight forgetfulness. The adjective "slight" indicates that there is not even a suggestion that everyday function has been affected by a memory change. In contrast, a box score of 0.5 in Memory indicates a consistent memory change and also suggests that the change may very subtly affect everyday performance (e.g., having to return to the grocery store after forgetting an item on the list).

Before scoring the CDR boxes, the clinician is to synthesize and evaluate all information: the report of the co-participant, the report (and performance) of the participant, and the clinician's own observations. It may be that an inobservant co-participant reports no memory problems, whereas the participant self-reports memory problems; if the clinician's judgment is that the individual is correct, then a box score of 0.5 for Memory can be given (**M=0.5**). The converse also is true: a 0.5 box score can be given when the co-participant reports a problem but the participant does not. It is also possible for the clinician to rate Memory as 0.5 (**M=0.5**) if they believe a problem exists — even though neither the co-participant nor the participant reports a problem.

CDR Sum of Boxes

Calculate the sum of values for all answers and enter the total score in the space provided.

Global CDR

The global CDR is derived from the scores in each of the six categories ("box score") as follows:

- Memory (M) is the primary category, and all others are secondary.
- CDR = M if at least three secondary categories are given the same score as memory. Whenever three or more secondary categories are given a score greater or less than the memory score, CDR = score of majority of secondary categories on whichever side of M has the greater number of secondary categories. However, when three secondary categories are scored on one side of M and two secondary categories are scored on the other side of M, then CDR = M.
- When M = 0.5, CDR = 1 if at least three of the other categories are scored 1 or greater. If M = 0.5, then CDR cannot be 0; it can only be 0.5 or 1.
- If M = 0, then CDR = 0 unless there is impairment (0.5 or greater) in two more secondary categories, in which case CDR = 0.5.

Although applicable to most Alzheimer's disease situations, these rules do not cover all possible scoring combinations. Unusual circumstances that occasionally occur in AD, and may be expected in non-Alzheimer's dementia as well, are scored as follows:

1. With ties in the secondary categories on one side of M, choose the tied scores closest to M for CDR (e.g., if M and another secondary category = 3, two secondary categories = 2, and two secondary categories = 1, then CDR = 2).
2. When only one or two secondary categories are given the same score as M, CDR = M as long as no more than two secondary categories are on either side of M.
3. When M = 1 or greater, CDR cannot be 0; in this circumstance, CDR = 0.5 when the majority of secondary categories are 0.

The CDR scoring algorithm can be accessed online at <https://knightadrc.wustl.edu/professionals-clinicians/cdr-dementia-staging-instrument/cdr-scoring-algorithm/>.

IVP FVP Section 1 – CDR® Dementia Staging Instrument¹

		Impairment					
Please enter scores (below):		None = 0	Questionable = 0.5	Mild = 1	Moderate = 2	Severe = 3	
1.	1.	Memory	No memory loss, or slight inconsistent forgetfulness	Consistent slight forgetfulness; partial recollection of events; “benign” forgetfulness	Moderate memory loss, more marked for recent events; defect interferes with everyday activities	Severe memory loss; only highly learned material retained; new material rapidly lost	Severe memory loss; only fragments remain
2.	2.	Orientation	Fully oriented	Fully oriented except for slight difficulty with time relationships	Moderate difficulty with time relationships; oriented for place at examination; may have geographic disorientation elsewhere	Severe difficulty with time relationships; usually disoriented to time, often to place	Oriented to person only
3.	3.	Judgment & Problem Solving	Solves everyday problems, handles business and financial affairs well; judgment good in relation to past performance	Slight impairment in solving problems, similarities, and differences	Moderate difficulty in handling problems, similarities, and differences; social judgment usually maintained	Severely impaired in handling problems, similarities, and differences; social judgment usually impaired	Unable to make judgments or solve problems
4.	4.	Community Affairs	Independent function at usual level in job, shopping, volunteer and social groups	Slight impairment in these activities	Unable to function independently at these activities, although may still be engaged in some; appears normal to casual inspection	No pretense of independent function outside the home; appears well enough to be taken to functions outside the family home	No pretense of independent function outside the home; appears too ill to be taken to functions outside the family home
5.	5.	Home & Hobbies	Life at home, hobbies, and intellectual interests well maintained	Life at home, hobbies, and intellectual interests slightly impaired	Mild but definite impairment of function at home; more difficult chores abandoned; more complicated hobbies and interests abandoned	Only simple chores preserved; very restricted interests, poorly maintained	No significant function in the home
6.	6.	Personal Care	Fully capable of self-care (= 0)		Needs prompting	Requires assistance in dressing, hygiene, keeping of personal effects	Requires much help with personal care; frequent incontinence
7./8.	7./8.	CDR Sum of Boxes		Global CDR			

¹Morris JC. The Clinical Dementia Rating (CDR): Current version and scoring rules. Neurology 43(11):2412-4, 1993. Copyright© Lippincott, Williams & Wilkins. Reproduced by permission.

In addition to the factors investigated within the CDR, two additional constructs — “Behavior, Comportment, and Personality” and “Language” — have been appended as the **NACC FTLD Behavior & Language Domains**, which will aid in the identification of participants with frontotemporal dementia and/or primary progressive aphasia, respectively. Because of their specialized nature, instructions for the scoring of each item are outlined below.

Behavior, Comportment, and Personality

This item should be completed by a clinician or other trained health professional who is skilled in the assessment of FTLD, based on informant report and a review of the participant’s cognitive, functional, and behavioral status. This domain is intended to assess changes in personality, aberrant behaviors, and changes in interpersonal relationships. The kinds of specific issues that might fall under these rubrics include: loss of insight, disinhibition, apathy, social withdrawal and disengagement, emotional lability, easy distractibility, reduced empathy for the feelings of others, impulsivity, and changes in eating habits and table manners. A key element of each of these is the degree to which these behaviors impact interpersonal relationships.

Language

This item should be completed by a clinician or other trained health professional who is well versed in aphasia and aphasic disorders, based on information derived from the informant and also from clinical assessment of the patient’s language functions in the course of the clinical interview and the mental status examination. This domain is intended to assess changes in language. The components of language that are primarily of interest include: spontaneous speech, auditory comprehension, object naming, reading and writing. Using these in combination, the goal is to assess the participant’s ability to create and understand various forms of information. The rate at which these are generated or comprehended is also of interest.

IVP FVP Section 2 - NACC FTLD Behavior & Language Domains

		Impairment				
Please enter scores (below):		None = 0	Questionable = 0.5	Mild = 1	Moderate = 2	Severe = 3
9.	9.	Behavior, Comportment, & Personality² Socially appropriate behavior	Questionable changes in comportment, empathy, appropriateness of actions	Mild but definite changes in behavior	Moderate behavioral changes, affecting interpersonal relationships and interactions in a significant manner	Severe behavioral changes, making interpersonal interactions all unidirectional
10.	10.	Language³ No language difficulty, or occasional mild tip-of-the-tongue	Consistent mild word-finding difficulties; simplification of word choice; circumlocution; decreased phrase length; and/or mild comprehension difficulties	Moderate word-finding difficulty in speech; cannot name objects in environment; reduced phrase length and/or agrammatical speech and/or reduced comprehension in conversation and reading	Moderate to severe impairments in either speech or comprehension; has difficulty communicating thoughts; writing may be slightly more effective	Severe comprehension deficits; no intelligible speech

Coding Guidebook for Form B5: BEHAVIORAL ASSESSMENT —

Neuropsychiatric Inventory Questionnaire (NPI-Q¹)

INSTRUCTIONS: *This form is to be completed by the clinician or other trained health professional based on co-participant interview, as described by the training video. (This is not to be completed by the participant as a paper-and-pencil self-report.) Check only one box for each category of response.*

ADRC personnel must be certified as an NPI-Q interviewer through the online training system developed by the University of California Los Angeles and NACC. The NPI-Q Interviewer Certification system may be accessed through the NACC website at <https://naccdata.org/data-collection/training/npq-certification>. The procedures established in the training system must be followed to complete this form.

The Neuropsychiatric Inventory – Questionnaire (NPI-Q) was developed and cross-validated with the standard NPI to provide a brief assessment of neuropsychiatric symptomatology in routine clinical practice settings (Kaufer et al., J Neuropsychiatry Clin Neurosci 2000, 12:233-239). The NPI-Q is adapted from the NPI (Cummings et al., Neurology 1994; 44:2308-2314), a validated informant-based interview that assesses neuropsychiatric symptoms over the previous month. The original NPI included 10 neuropsychiatric domains; two others, Nighttime Behavioral Disturbances and Appetite/Eating Changes, have subsequently been added.

Each of the 12 NPI-Q domains contains a screening question that reflects cardinal symptoms of that domain. Initial responses to each domain's screening question are "Yes" (present), "No" (absent), or "Unknown". If the response to the domain question is "No" or "Unknown", the interviewer goes to the next domain. If "Yes", the interviewer then rates the Severity of the symptoms present within the last month on a 3-point scale.

It is recommended that responses to the NPI-Q be reviewed for completeness by the interviewer and to clarify uncertainties after each administration.

The NPI and NPI-Q are both copyright-protected by Jeffrey L. Cummings, MD. The NPI-Q was developed by Daniel Kaufer, MD and is used with permission. **Use of the NPI or NPI-Q in investigational studies sponsored in whole or part by for-profit entities is prohibited without express written consent.**

For inquiries regarding the NPI-Q, contact:

Jeffrey L. Cummings, MD (cumminj@ccf.org)
Cleveland Clinic Lou Ruvo Center for Brain Health
Mail Code Las Vegas, 888 W Bonneville
Las Vegas, NV 89106

The NPI-Q can be found at www.NPItest.net

Please answer the following questions based on changes that have occurred since the participant first began to experience memory (i.e., cognitive) problems. **Select 1=Yes only if the symptom(s) has been present in the last month. Otherwise, select 0=No.** (NOTE: for the UDS, please administer the NPI-Q to all participants.)

For each item marked **1=Yes**, rate the SEVERITY of the symptom (how it affects the participant):

1= **Mild** (noticeable, but not a significant change) 2= **Moderate** (significant, but not a dramatic change) 3= **Severe** (very marked or prominent; a dramatic change)

The wording of the original NPI-Q focused on changes that have occurred since the participant first began to experience *memory* problems. However, in order to assess neuropsychiatric symptoms associated with etiologies other than Alzheimer's disease, the NPI-Q instructions have been edited to capture changes that have occurred since the participant first began to experience *cognitive* problems.

For participants who are cognitively normal or whose cognition has not yet been evaluated — Please report any behaviors or symptoms that were present within the last month, ignoring behaviors and symptoms that are usual for the participant and have been customary throughout his/her life.

If the co-participant does not answer a question, select **9=Unknown**.

IVP	FVP														
1.	1.	NPI CO-PARTICIPANT: <input type="checkbox"/> 1 Spouse <input type="checkbox"/> 2 Child <input type="checkbox"/> 3 Other (SPECIFY): _____													
					SEVERITY										
					Yes	No	Unk		Mild	Mod	Sev	Unk			
2.	2.	Delusions – Does the patient have false beliefs, such as thinking that others are stealing from him/her or planning to harm him/her in some way?	2a.	<input type="checkbox"/> 1	<input type="checkbox"/> 0	<input type="checkbox"/> 9	2b.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9				
3.	3.	Hallucinations – Does the patient have hallucinations such as false visions or voices? Does he or she seem to hear or see things that are not present?	3a.	<input type="checkbox"/> 1	<input type="checkbox"/> 0	<input type="checkbox"/> 9	3b.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9				
4.	4.	Agitation/Aggression – Is the patient resistive to help from others at times, or hard to handle?	4a.	<input type="checkbox"/> 1	<input type="checkbox"/> 0	<input type="checkbox"/> 9	4b.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9				
5.	5.	Depression/Dysphoria – Does the patient seem sad or say that he/she is depressed?	5a.	<input type="checkbox"/> 1	<input type="checkbox"/> 0	<input type="checkbox"/> 9	5b.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9				
6.	6.	Anxiety – Does the patient become upset when separated from you? Does he/she have any other signs of nervousness such as shortness of breath, sighing, being unable to relax, or feeling excessively tense?	6a.	<input type="checkbox"/> 1	<input type="checkbox"/> 0	<input type="checkbox"/> 9	6b.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9

Appetite/Eating – Has the patient lost or gained weight, or had a change in the type of food he/she likes?	13a.	<input type="checkbox"/> 1	<input type="checkbox"/> 0	<input type="checkbox"/> 9	13b.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9				

Coding Guidebook for Form B6: BEHAVIORAL ASSESSMENT —

Geriatric Depression Scale (GDS)¹

INSTRUCTIONS: This form is to be completed by the clinician or other trained health professional, based on participant response. For additional clarification and examples, see UDS Coding Guidebook for Initial Visit Packet, Form B6. Check only one answer per question.

This form is intended for completion by clinician or other trained health professional as a direct participant interview. The form is not to be administered to the co-participant. If your Center prefers to administer the entire 30-item GDS, please first administer this 15-item form and score appropriately; then administer the remaining 15 items on a separate non-UDS form.

The Geriatric Depression Scale was developed by Stanford University as a basic screening measure for depression in older adults. Further information is available online at <http://www.stanford.edu/~yesavage/GDS.html>.

Check this box and enter “88” below for the Total GDS Score **if and only if the participant:** 1.) does not attempt the GDS, or 2.) answers fewer than 12 questions.

Instruct the participant: “In the next part of this interview, I will ask you questions about your feelings. Some of the questions I will ask you may not apply, and some may make you feel uncomfortable. For each question, please answer “yes” or “no,” depending on how you have been feeling **in the past week, including today.**”

Select **9=Did not answer** if the subject is unable or unwilling to answer a question.

IVP	FVP		Yes	No	Did not answer
1.	1.	Are you basically satisfied with your life?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
2.	2.	Have you dropped many of your activities and interests?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
3.	3.	Do you feel that your life is empty?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
4.	4.	Do you often get bored?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
5.	5.	Are you in good spirits most of the time?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
6.	6.	Are you afraid that something bad is going to happen to you?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
7.	7.	Do you feel happy most of the time?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
8.	8.	Do you often feel helpless?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
9.	9.	Do you prefer to stay at home, rather than going out and doing new things?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
10.	10.	Do you feel you have more problems with memory than most?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
11.	11.	Do you think it is wonderful to be alive now?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12.	12.	Do you feel pretty worthless the way you are now?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
13.	13.	Do you feel full of energy?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
14.	14.	Do you feel that your situation is hopeless?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
15.	15.	Do you think that most people are better off than you are?	<input type="checkbox"/> ₁	<input type="checkbox"/> ₀	<input type="checkbox"/> ₉
16.	16.	Sum all checked answers for a Total GDS Score (<i>max score = 15; did not complete = 88</i>)			

Calculate the sum of values for all checked “Yes” or “No” answers and enter the total score in the space provided. The calculation may include a maximum of three unanswered items, and the final sum must be prorated for the number of unanswered items (see instructions below for prorating scores). If more than three items are unanswered, however, the test must be considered incomplete and the Total GDS Score entered as **88=Did not complete**.

PRORATING SCORES (what to do if the participant does not answer up to three items): If up to three of the 15 items are unanswered (i.e., responses are **9=Did not answer**), add the total score on the completed items plus an estimated score for the unanswered items to get a total score. The estimated score for unanswered items is calculated as:

$$(\text{Total score of completed items} / \# \text{ of completed items}) * (\# \text{ of unanswered items})$$

You may get a fractional answer that requires rounding. For example, if the subject got a score of 5 for 12 completed items, then the estimated total score is $5 + [(5/12) * 3] = 6.25$. Since the decimal portion of this value is <0.50 , the total GDS score is 6.

¹Sheikh JI, Yesavage JA. Geriatric Depression Scale (GDS): Recent evidence and development of a shorter version. *Clinical Gerontology: A Guide to Assessment and Intervention* 165–173, NY: The Haworth Press, 1986. Reproduced by permission of the publisher.

TELEPHONE VISIT:

ASSESSMENT OF EMOTIONAL FUNCTIONING

While likely an infrequent occurrence, some participants may produce elevated scores on the Geriatric Depression Scale, suggesting the presence of significant emotional distress or suicidal ideation. If not already in place, it is strongly recommended that centers adopt guidelines for handling these situations remotely, including identifying the present location and address of any participant who demonstrates emotional distress. The following set of questions represents one example of how to manage elevated depression scores on the GDS when assessed by phone.

These guidelines are for certified interviewers when they suspect or detect significant emotional distress or suicidal ideation. "Significant emotional distress" is suggested by a score greater than 8 on the Geriatric Depression Scale or by any responses during the encounter that suggest significant emotional distress, such as statements regarding suicide, hopelessness, or lasting depressed mood.

Please note that the following questions are intended only as an example. Centers may substitute their own script.

If GDS > 8, or if you suspect the participant is significantly distressed, then say:

- 1. **"Your response to some of the questions suggests to me that you might be experiencing some significant emotional distress at this time. Is that true?"** No Yes
If "No," then say: **"Thanks. If you do, we recommend you speak with someone you feel comfortable talking to – a family member, your physician, a counselor, or your clergy person."** Continue with administration.
- 2. If "Yes," then say: **"I see. I need to ask you a couple more questions."**
 - 2a. **"In the past month have you thought you would be better off dead or wished you were dead?"** No Yes
 - 2b. **"In the past month have you wanted to harm yourself?"** No Yes
 - 2c. **"In the past month have you thought about suicide?"** No Yes
 - 2d. **"In the past month have you had a suicide plan?"** No Yes
 - 2e. **"In the past month have you attempted suicide?"** No Yes

If responses to 2b through 2e are "No," then say: **"Thank you. We recommend you speak with a family member, your physician, or another professional like a psychologist, clergy person, or counselor to get help with your distress."** Continue with administration

If any response to 2b-2e is "Yes," then say: **"We strongly recommend that you speak with a family member, your physician, or another professional like a psychologist, clergyman, or counselor to get help with your distress. I will let one of our study clinicians and one of the lead investigators at our ADRC know about your distress level so they can follow up with you and perhaps assist you in finding help."**

Call the on-duty study clinician immediately and inform them of the participant's status and review the call with them. Study clinician will contact the participant by phone and follow up as per Center protocol.

Save a copy of all emails and other documents related to this event.

SUICIDAL IDEATION	
ADRC CCC PI notified date:	Follow up with participant: <input type="checkbox"/> No follow up required
ADRC staff initials:	Outcome/follow-up comments:

Complete the form above and attach it to the test administration booklet for data entry in the ADRC website for the study. Update with any follow-up information as it is received. Attach all correspondence to this document and file in participant's file.

Coding Guidebook for Form B7: FUNCTIONAL ASSESSMENT —

NACC Functional Assessment Scale (FAS¹)

INSTRUCTIONS: This form is to be completed by the clinician or other trained health professional, based on information provided by the co-participant. Indicate the level of performance for each activity by checking the one appropriate response.

This form is intended for completion by clinician or other trained health professional per co-participant interview. The intent of the FAS is to assess change in an individual's specific functional activities, relative to previously attained abilities, that are caused by cognitive dysfunction. Select the most accurate response, based on the co-participant's assessment.

IVP	FVP	In the past four weeks, did the subject have difficulty or need help with:	Not applicable (e.g., never did)	Normal	Has difficulty, but does by self	Requires assistance	Dependent	Unknown
1.	1.	Writing checks, paying bills, or balancing a checkbook	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9
2.	2.	Assembling tax records, business affairs, or other papers	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9
3.	3.	Shopping alone for clothes, household necessities, or groceries	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9
4.	4.	Playing a game of skill such as bridge or chess, working on a hobby	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9
5.	5.	Heating water, making a cup of coffee, turning off the stove	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9
6.	6.	Preparing a balanced meal	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9
7.	7.	Keeping track of current events	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9
8.	8.	Paying attention to and understanding a TV program, book, or magazine	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9
9.	9.	Remembering appointments, family occasions, holidays, medications	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9
10.	10.	Traveling out of the neighborhood, driving, or arranging to take public transportation	<input type="checkbox"/> 8	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 9

If the co-participant indicates that the participant no longer performs a particular task, it is reasonable to probe further and ask if they think the participant *could* still do the task. This will help tease out the relevant cognitive impairment.

If the co-participant believes the participant did the activity but cannot speak to the participant's potential changes in that activity, then they should select **9=Unknown**.

Coding Guidebook for Form B8: EVALUATION FORM — Neurological Examination Findings

INSTRUCTIONS: This form should be completed by a clinician with experience in performing a comprehensive neurologic examination, assessing the presence/absence of neurological signs, and rating the degree of any abnormalities. Additionally, the clinician should have experience in completing each of the assessment measures associated with the gateway questions if any key neurologic findings are present. Check only one box per question.

Use the information obtained at the neurological exam to indicate the neurological findings, using your best clinical judgment to ascribe those symptoms to a particular clinical syndrome.

IVP FVP Section 1 – Examiner & examination questions

1.	1.	Which of the following was completed on this participant? <input type="checkbox"/> 0 No neurologic examination (END FORM HERE) <input type="checkbox"/> 1 Comprehensive neurologic examination as suggested in the UDS Coding Guidebook <input type="checkbox"/> 2 Focused or partial neurologic examination performed in-person <input type="checkbox"/> 3 Focused or partial neurologic examination performed via video
2.	2.	Were there abnormal neurological exam findings? <input type="checkbox"/> 0 No abnormal findings (END FORM HERE; If this box is checked, all items will default to 0 = Absent in the database) <input type="checkbox"/> 1 Yes

Section 2 – Specific clinical findings

Section 2A – Parkinsonian signs

3.	3.	<input type="checkbox"/> 0 No abnormal signs in this section are present (SKIP TO SECTION 2B; If this box is checked, Q3a through Q3n will default to 0 = Absent in the database) <input type="checkbox"/> 1 Yes (IF YES – complete questions 3a–3n and consider completing additional measures as described on page 3) <input type="checkbox"/> 8 Not assessed (SKIP TO SECTION 2B; If this box is checked, Q3a through Q3n will default to 8 = Not Assessed in the database)
----	----	--

If any of the parkinsonian signs listed below are present, select **1=Yes**. Otherwise, select **0=No** and skip to Section 2B. If parkinsonian symptoms were not assessed, select **8=Not assessed** and skip to Section 2B.

FINDING:		Absent	Focal or Unilateral	Bilateral & Largely Symmetric	Bilateral & Largely Asymmetric	Not Assessed
3a.	3a. Slowing of fine motor movements	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8

This refers to movements such as finger tapping, hand pronation-supination, or foot- or toe-tapping. Significant slowing, even if slight or mild, is sufficient to report.

3b.	3b. Limb tremor at rest	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
-----	-------------------------	----------------------------	----------------------------	----------------------------	----------------------------	----------------------------

A definite rest tremor, even if only intermittent, is sufficient to report.

3c.	3c. Limb tremor - postural	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
-----	----------------------------	----------------------------	----------------------------	----------------------------	----------------------------	----------------------------

3d.	3d. Limb tremor - kinetic	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
-----	---------------------------	----------------------------	----------------------------	----------------------------	----------------------------	----------------------------

3e.	3e. Limb rigidity - arm	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
-----	-------------------------	----------------------------	----------------------------	----------------------------	----------------------------	----------------------------

Rigidity should be judged on passive movement of major joints with participant relaxed in sitting position; cogwheeling and paratonia (gegenhalten) to be ignored. Any degree of rigidity is sufficient to report.

Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.

3f.	3f. Limb rigidity - leg	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
-----	-------------------------	----------------------------	----------------------------	----------------------------	----------------------------	----------------------------

Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.

3g.	3g. Limb dystonia - arm	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
-----	-------------------------	----------------------------	----------------------------	----------------------------	----------------------------	----------------------------

3h.	3h. Limb dystonia - leg	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
-----	-------------------------	----------------------------	----------------------------	----------------------------	----------------------------	----------------------------

3i.	3i. Chorea	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
-----	------------	----------------------------	----------------------------	----------------------------	----------------------------	----------------------------

Section 2A – Parkinsonian signs

FINDING:		Absent	Present	Not Assessed
3j.	3j. Decrement in amplitude of fine motor movements	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
<p>Instruct the participant to perform rapid alternating movements of the fingers (finger tapping repeatedly), hands (flexing and extending the fingers repeatedly), legs (stomping on the floor repeatedly) and feet (tapping of the toe portion of the foot repeatedly) at least 10 times. If the amplitude and/or speed on the 6th to 10th movements is/are less than on the 1st to 4th movements, then check that a decrement is present.</p>				
3k.	3k. Axial rigidity	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
<p>For example, increased tone, greater in the neck and trunk than in the limbs.</p>				
3l.	3l. Postural instability	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
<p>Postural instability involves inadequate response to sudden, strong posterior displacement produced by pull on shoulders while participant is erect with eyes open and feet slightly apart; participant is prepared. Taking more than two steps or requiring the examiner to catch the participant are examples of postural instability. Any degree of postural instability is sufficient to select 1=Present.</p> <p>Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.</p>				
3m.	3m. Facial masking	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
3n.	3n. Stooped posture	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8

Section 2B – Cortical/pyramidal/other signs

4.	4.	<input type="checkbox"/> 0 No abnormal signs in this section are present (SKIP TO SECTION 2C ; If this box is checked, Q4a through Q4q will default to 0=Absent in the database) <input type="checkbox"/> 1 Yes (IF YES – complete questions 4a–4q and consider completing additional measures as described on page 3) <input type="checkbox"/> 8 Not assessed (SKIP TO SECTION 2C ; If this box is checked, Q4a through Q4q will default to 8 = Not Assessed in the database)				
<p>If any of the cortical, pyramidal, and other signs listed below are present, select 1=Yes. Otherwise, select 0=No and skip to Section 2C. If cortical, pyramidal, and other signs were not assessed, select 8=Not assessed and skip to Section 2C.</p>						
FINDING:		Absent	Focal or Unilateral	Bilateral & Largely Symmetric	Bilateral & Largely Asymmetric	Not Assessed
4a.	4a. Limb apraxia	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
4b.	4b. Face or limb findings in UMN distribution*	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
<p>Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.</p>						
4c.	4c. Face or limb findings in an LMN distribution*	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
<p>Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.</p>						
4d.	4d. Visual field cut	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
<p>Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.</p>						

FINDING:				Absent	Present	Not Assessed	
4e.	4e.	Limb ataxia	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8
4f.	4f.	Myoclonus	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 8

Myoclonus: a sudden shocklike twitching of muscles or parts of muscles without any rhythm or pattern.

Myoclonus, if present, usually begins distally in one upper limb and may spread proximally. The frequency and amplitude of myoclonic jerks typically increase with tactile stimulation (i.e., stimulus-sensitive myoclonus) and action (i.e., action myoclonus). Typically, a peripheral stimulus that induces myoclonic jerks is not associated with an enhanced somatosensory-evoked potential, and the latency from stimulus to jerk is brief — just sufficient to have reached the cortex and returned to the periphery (i.e., approximately 40 milliseconds in the upper limb). These features are distinct from most other forms of cortical reflex myoclonus (which is associated with enhanced somatosensory-evoked potential and a longer stimulus-to-jerk latency).

4g.	4g.	Unilateral Somatosensory loss (localized to the brain; disregard sensory changes localized to the spinal cord or peripheral nerves)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
-----	-----	---	----------------------------	----------------------------	----------------------------

Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.

4h.	4h.	Aphasia (disregard complaints of mild dysnomia if not viewed as reflecting a clinically significant change)	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
4i.	4i.	Alien limb phenomenon	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8

Involuntary motor activity of a limb in conjunction, often accompanied by a feeling of estrangement from that limb.

4j.	4j.	Hemispatial neglect	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
-----	-----	---------------------	----------------------------	----------------------------	----------------------------

Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.

4k.	4k.	Prosopagnosia	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
4l.	4l.	Simultanagnosia	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
4m.	4m.	Optic ataxia	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8

Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.

4n.	4n.	Apraxia of gaze	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
4o.	4o.	Vertical +/- horizontal gaze palsy**	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8

Remote/telephone visit: Since this exam finding cannot be assessed adequately remotely, check “not assessed” if the encounter was conducted via a remote video visit.

4p.	4p.	Dysarthria*	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8
4q.	4q.	Apraxia of speech	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 8

For example, difficulty with articulation or prosody/rhythm.

*UMN findings could include weakness in a pyramidal pattern, hyper-reflexia, Babinski or Hoffman sign present, or spasticity; LMN findings could include weakness due to neuromuscular dysfunction, muscle wasting/atrophy, or fasciculations. These findings could be consistent with a cerebrovascular insult or with a degenerative disorder such as ALS, PLS, SMA, PSP, CBS, etc.

**Do not mark Present if only reduction of upgaze is present.

Section 2C – Gait

5. 5. 0 No abnormal signs in this section are present (END FORM HERE)
 1 Yes (IF YES - complete question 5a and consider completing additional measures as described on page 3)
 8 Not assessed (END FORM HERE)

If any of the gait signs listed below are present, select **1=Yes**. Otherwise, select **0=No** and end form here. If gait signs were not assessed, select **8=Not assessed** and end form here.

5a.	5a.	<p>Finding:</p> <input type="checkbox"/> 1 Hemiparetic gait (spastic) <input type="checkbox"/> 2 Foot drop gait (lower motor neuron) <input type="checkbox"/> 3 Ataxic gait <input type="checkbox"/> 4 Apractic magnetic gait <input type="checkbox"/> 5 Hypokinetic/parkinsonian gait <input type="checkbox"/> 6 Antalgic gait	<input type="checkbox"/> 7 Other (SPECIFY): <hr/> <hr/>
-----	-----	---	---

Section 2D – Additional measures

There are **several additional clinical measures** to consider for completion depending on the findings and the suspicion of the clinical syndrome; these include, but are not limited to, the following:

a) If there are any features of a movement disorder (e.g., bradykinesia, tremor, rigidity, postural instability, etc.):
Consider completing Form B3 UPDRS, or the MDS-UPDRS

b) If there are any features of ALS (e.g., upper motor neuron dysfunction and/or lower motor neuron dysfunction):
Consider completing the ALSFRS-R

c) If there are any features of PSP- Richardson's syndrome (e.g., parkinsonism, postural instability, supranuclear gaze palsy, etc.):
Consider completing the PSPRS

d) If there are any features of corticobasal syndrome (e.g., limb rigidity, limb apraxia, myoclonus, dystonia, cortical sensory loss, alien limb phenomenon, etc.):
Consider completing the PSPRS and/or the CBFS

e) If there are any features of complex visual processing dysfunction (e.g. hemineglect, visual agnosia, simultanagnosia, optic ataxia, ocular apraxia, apraxia of eyelid opening, etc.):
Consider completing a standardized measure assessing PCA

f) If there are any features of aphasia or apraxia of speech (e.g., NIH Stroke Scale, Progressive Aphasia Severity Scale, Western Aphasia Battery, etc.):
Consider completing a standardized measure assessing speech and language

g) If there are clinical and/or imaging findings suggesting a vascular contribution to the clinical presentation:
Consider completing NIH Stroke Scale, Hachinski Ischemic Scale, etc.

Section 2E – Glossary of abbreviations

ALS = Amyotrophic Lateral Sclerosis

ALSFRS-R = Amyotrophic Lateral Sclerosis Functional Rating Scale–Revised

CBS = Corticobasal Syndrome

CBFS = Cortical Basal ganglia Functional Scale

LMN = Lower Motor Neuron

MDS-UPDRS = Movement Disorders Society - Unified Parkinson's Disease Rating Scale

PCA = Posterior Cortical Atrophy

PLS = Primary Lateral Sclerosis

PSP = Progressive Supranuclear Palsy

PSPRS = Progressive Supranuclear Palsy Rating Scale

SMA = Spinal Muscular Atrophy

UMN = Upper Motor Neuron

UPDRS = Unified Parkinson's Disease Rating Scale

Coding Guidebook for Form B9: Clinician Judgment of Symptoms

INSTRUCTIONS: This form is to be completed by the clinician. Questions below are not intended for direct administration to participant or co-participant. For all questions the clinician must use their best judgment about whether symptoms are present and make their estimate when symptoms began based on information from participant and co-participant. Check only one box per question.

The purpose of this Form is to provide a clinical description of the symptoms the participant is currently experiencing and the approximate age of onset of symptoms. The form is meant to describe changes in the participant's cognitive, behavioral, or motor function compared with their usual or customary function in these areas. Typically, changes that would have occurred within the last five to ten years would be recorded on this form, but changes that occurred even earlier could be included, if the clinician judges that they represent a change from a stable level of usual or customary function. Any changes that meet these criteria are part of the current syndrome for the purposes of this form. Cognitive, behavioral, or motor changes that are present, but had their onset many years ago, for instance in childhood or early adulthood, would not be denoted on this form if they are similar in type and severity to what they have always been for this participant. The Form should be completed by a clinician, and conclusions should be based on information obtained from the participant, co-participant, medical records, and/or observation. Results from the neuropsychological test battery (except for the MoCA) and imaging should not be used to determine answers for this Form but may be used to make the clinical or etiologic diagnosis on Forms D1a and D1b.

IVP FVP Section 1 – Changes across domains

Throughout Form B9, "prior to onset of current syndrome" refers to the overall cognitive/behavioral/motor syndrome.

Reported by participant

1.	1.	Does the <u>participant</u> report a decline in any cognitive domain (relative to stable baseline prior to onset of current syndrome)?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes	<input type="checkbox"/> 8 Could not be assessed / participant is too impaired
----	----	--	---	--

Decline in cognition refers to changes in the participant's usual or customary memory and non-memory cognitive functions. Select **1 = Yes** if the participant reports a current (i.e., recent) decline in memory or non-memory cognitive function. This question refers to cognition only and not behavior, motor, or other non-memory symptoms. If, based upon the clinician's judgment, the participant is too impaired to provide an answer to this question, then select **8 = Could not be assessed/participant is too impaired**.

2.	2.	Does the <u>participant</u> report a change in any motor domain (relative to stable baseline prior to onset of current syndrome)?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes	<input type="checkbox"/> 8 Could not be assessed / participant is too impaired
----	----	---	---	--

3.	3.	Does the <u>participant</u> report the development of any significant neuropsychiatric/behavioral symptoms (relative to stable baseline prior to onset of current syndrome)?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes	<input type="checkbox"/> 8 Could not be assessed / participant is too impaired
----	----	--	---	--

Given the episodic nature of neuropsychiatric/behavioral symptoms, "stable baseline" refers to the participant's predominant behavioral state prior to the onset of the current syndrome (which could be cognitive, neuropsychiatric / behavioral or both).

Reported by co-participant

4.	4.	Does the <u>co-participant</u> report a decline in any cognitive domain (relative to stable baseline prior to onset of current syndrome)?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes	<input type="checkbox"/> 8 There is no co-participant
----	----	---	---	---

Decline refers to cognitive change(s) in the participant's usual or customary memory and non-memory cognitive functions. Select **1 = Yes** if the co-participant reports a current (i.e., recent) decline in the participant's cognitive function(s). This question refers to cognition only and not behavior, motor, or other non-memory symptoms. Every effort should be made to have a co-participant present at UDS visits; however, if there is no co-participant, select **8 = There is no co-participant**.

5.	5.	Does the <u>co-participant</u> report a change in any motor domain (relative to stable baseline prior to onset of current syndrome)?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes	<input type="checkbox"/> 8 There is no co-participant
----	----	--	---	---

6.	6.	Does the <u>co-participant</u> report the development of any significant neuropsychiatric/behavioral symptoms (relative to stable baseline prior to onset of current syndrome)?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes	<input type="checkbox"/> 8 There is no co-participant
----	----	---	---	---

Given the episodic nature of neuropsychiatric/behavioral symptoms, "stable baseline" refers to the participant's predominant behavioral state prior to the onset of the current syndrome (which could be cognitive, neuropsychiatric / behavioral or both).

Reported by clinician

7.	7.	Does the participant have any neuropsychiatric/behavioral symptoms, decline in any cognitive domains, or changes in any motor domains?	<input type="checkbox"/> 0 No (END FORM HERE) <input type="checkbox"/> 1 Yes
----	----	--	--

Cognitive decline refers to changes in the participant’s usual or customary memory or non-memory cognitive abilities reported or observed at the current visit. Neuropsychiatric/behavioral symptoms refers to meaningful changes from the predominant behavioral state prior to the onset of the current syndrome.

If the clinician is certain that there has been no meaningful (i.e., clinically significant) neuropsychiatric/behavioral change and no decline in the participant’s memory or non-memory cognitive abilities, select **0 = No** and END THE FORM HERE.

If the clinician is certain that there has been a meaningful decline or change, select **1 = Yes** and complete questions 8 - 10.

In the following sections record the phenotype of clinically meaningful symptoms or absence of a **history of these symptoms**, as determined by the clinician’s best judgment following the medical history interview with the participant and co-participant.

Section 2 – Cognitive impairment

Consider if the participant currently is meaningfully impaired, **relative to stable baseline prior to onset of current syndrome**:

8.	8.	Based on the clinician’s judgment, is the participant currently experiencing meaningful impairment in cognition?	<input type="checkbox"/> 0 No (SKIP TO QUESTION 11) <input type="checkbox"/> 1 Yes
----	----	--	--

9. 9. Indicate whether the participant is meaningfully impaired in the following cognitive domains or has fluctuating cognition:

		Cognitive	No	Yes	Unknown
9a.	9a.	Memory — Does the participant forget conversations or dates, repeat questions or statements, or misplace things more than usual?	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9
9b.	9b.	Orientation — Does the participant have trouble knowing the day, month, and year, forget names of people they know well, get lost in familiar locations, or not recognize familiar locations?	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9
9c.	9c.	Executive function (judgment, planning, and problem-solving) — Does the participant have trouble planning complex activities like trips, financial transactions, parties, or group meetings?	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9
9d.	9d.	Language — Does the participant have hesitant speech, have trouble finding words, use inappropriate words without self-correction, or have trouble with speech comprehension?	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9
9e.	9e.	Visuospatial function — Does the participant have difficulty interpreting visual stimuli or finding their way around in familiar environments?	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9
9f.	9f.	Attention/concentration — Does the participant have a short attention span or limited ability to concentrate? Are they easily distracted?	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9
9g.	9g.	Fluctuating cognition — Does the participant exhibit pronounced variation in attention and alertness, noticeably over hours or days—for example, long lapses or periods of staring into space, or times when their ideas have a disorganized flow?	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9
9h.	9h.	Other (SPECIFY): _____	<input type="checkbox"/> 0	<input type="checkbox"/> 1	

For Questions 9a–9g, select **9 = Unknown** only if the answer cannot be determined based upon information gathered from the participant, co-participant, medical records, and/or observation. If the participant exhibits a meaningful decline in any ability (or abilities) other than those listed, select **1 = Yes** for Question 9h and briefly describe under “Other (specify)”.

9i.	9i.	If any of the cognitive symptoms in 9a–9h are present, at what age did they begin? <i>(The clinician must use their best judgment to estimate an age of onset. If multiple symptoms with different ages of onset are identified, denote the age of the earliest symptom.)</i> (777 = age provided at previous UDS visit)	____ _
-----	-----	---	--------

Cognitive decline refers to changes in the participant’s usual or customary memory or non-memory cognitive abilities reported or observed at the current visit. Age of onset of cognitive decline should correspond to the predominant symptom that was first recognized as a change in the participant’s cognitive abilities.

If the exact age is unknown, the clinician should estimate to the nearest decade. For example, if the co-participant says that cognitive decline started in the participant’s 50s or 60s, estimate age 55 or 60.

		No	Yes	Unknown
10.	10.	Mode of onset of cognitive impairment: Indicate the mode of onset for the most prominent cognitive problem that is causing the participant's complaints and/or affecting the participant's function.		<input type="checkbox"/> 1 Gradual <input type="checkbox"/> 2 Subacute <input type="checkbox"/> 3 Abrupt <input type="checkbox"/> 4 Other (SPECIFY): _____ <input type="checkbox"/> 99 Unknown

This question refers to the pattern of onset of the cognitive change (i.e., when change in cognition was first noticed). The clinician should choose the option that most closely resembles the pattern of onset of the participant's cognitive symptom(s). If the mode of onset was other than those listed, select **4 = Other (specify)** and briefly describe in the space provided. Select **99 = Unknown** only if no information is available to allow the clinician to ascertain the mode of onset.

Section 3 – Neuropsychiatric symptoms and behavioral changes

Consider if the participant manifests – **in the last month** – clinically meaningful neuropsychiatric symptoms or change in behavior **relative to stable baseline** (i.e., predominant behavioral state prior to the onset of the current syndrome). Clinically meaningful change refers to symptoms or changes that are evident most days in a given four-week period.

11.	11.	Based on the clinician's judgment, does the participant manifest clinically meaningful neuropsychiatric symptoms or meaningful change in behavior?	<input type="checkbox"/> 0 No (SKIP TO QUESTION 14) <input type="checkbox"/> 1 Yes
-----	-----	--	---

Neuropsychiatric symptoms or changes in behavior refers to significant symptoms or meaningful change or decline from the participant's usual or customary (predominant) behavioral state prior to the onset of the current syndrome. If the clinician is certain that there have been no neuropsychiatric symptoms or meaningful (i.e., clinically significant) in the participant's behavior, select **0 = No** and skip to Question 14. If the clinician is certain that there has been a meaningful decline, select **1 = Yes** and complete Questions 12–13.

12.	12.	Specify the phenotype of clinically meaningful neuropsychiatric symptoms or meaningful change in behavior that has manifested in the last month .
-----	-----	--

The responses below should reflect the clinician's best judgement taking into account information obtained from the participant, co-participant, medical records, and/or observation, including any neuropsychiatric or mood rating scales administered during this visit.

Mood, motivation, and agitation

QUESTIONS 12a – 12u: If the symptoms assessed in Questions 12a – 12u are reported or observed to reflect the participant's condition at this clinical evaluation based upon information gathered from the participant, co-participant, medical records, and/or observation, then select **1=Yes**; otherwise, select **0=No**. Select **9=Unknown** only if the answer cannot be determined based upon information gathered from the participant, co-participant, medical records, and/or observation.

		No	Yes	Unknown
12a.	12a.	Apathy/withdrawal — Has the participant lost interest in the world around them, lost interest in doing things, or lack motivation for starting new activities?		<input type="checkbox"/> 0 <input type="checkbox"/> 1 <input type="checkbox"/> 9
12b.	12b.	Depressed mood — Does the participant seem sad or depressed, or say that they feel sad or depressed?		<input type="checkbox"/> 0 <input type="checkbox"/> 1 <input type="checkbox"/> 9
12c.	12c.	Anxiety — Does the participant seem very nervous, worried, or frightened for no apparent reason? Do they seem very tense or fidgety? Do they seem afraid to be apart from caregivers or from others that they trust?		<input type="checkbox"/> 0 <input type="checkbox"/> 1 <input type="checkbox"/> 9
12d.	12d.	Euphoria — Does the participant seem too cheerful or too happy for no reason, manifest a persistent and abnormally good mood, or find humor where others do not?		<input type="checkbox"/> 0 <input type="checkbox"/> 1 <input type="checkbox"/> 9
12e.	12e.	Irritability — Does the participant get irritated and easily disturbed? Are their moods very interchangeable? Are they abnormally impatient?		<input type="checkbox"/> 0 <input type="checkbox"/> 1 <input type="checkbox"/> 9
12f.	12f.	Agitation — Is the participant easily distressed or angered, or hard to handle, or uncooperative, or resistive to care or to help from others?		<input type="checkbox"/> 0 <input type="checkbox"/> 1 <input type="checkbox"/> 9
12g.	12g.	If any of the mood-related behavioral changes in 12a–12f are present, at what age did they begin? (The clinician must use their best judgment to estimate an age of onset. If multiple symptoms with different ages of onset are identified, denote the age of the earliest symptom.) (777 = age provided at previous UDS visit)		_____

Psychosis and impulse control			No	Yes	Unknown
12h.	12h.	Visual hallucinations - Does the participant exhibit visual perceptions without a stimulus?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12h1.	12h1.	IF YES , do their hallucinations include patterns that are not definite objects, such as pixelation of flat uniform surfaces?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12h2.	12h2.	IF YES , do their hallucinations include well-formed and detailed images of objects or people, either as independent images or as part of other objects?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12i.	12i.	Auditory hallucinations - Does the participant exhibit auditory perceptions without a stimulus?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12i1.	12i1.	IF YES , do the auditory hallucinations include simple sounds like knocks or other simple sounds?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12i2.	12i2.	IF YES , do the auditory hallucinations include complex sounds like voices speaking words, or music?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12j.	12j.	Delusions - Does the participant have fixed, idiosyncratic beliefs that are not true? For example, insisting that others are trying to harm them or steal from them? Have they said that family members or staff are not who they say they are, or that the house is not their home?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉

Idiosyncratic refers to ideas that are held uniquely by the participant that do not reflect ideas shared by the participant’s cultural, religious or social environment/group.

12k.	12k.	Aggression — Does the participant shout angrily, slam doors, attempt to hit or hurt others, or exhibit other verbally or physically aggressive behaviors?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12l.	12l.	If any of the psychosis and impulse control –related behavioral changes in 12h–12k are present, at what age did they begin? (<i>The clinician must use their best judgment to estimate an age of onset. If multiple symptoms with different ages of onset are identified, denote the age of the earliest symptom.</i>) (777 = age provided at previous UDS visit)	— — —		

Personality			No	Yes	Unknown
12m.	12m.	Disinhibition — Does the participant act impulsively without thinking, say things that are not usually done or said in public, or do things that are embarrassing to caregivers or others, or do they talk personally to strangers or have disregard for personal hygiene?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12n.	12n.	Personality change — Does the participant exhibit bizarre behavior or behavior uncharacteristic of the participant, such as unusual collecting, suspiciousness (<i>without delusions</i>), unusual dress, or unusual eating behaviors?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12o.	12o.	Loss of empathy — Does the participant fail to take others’ feelings into account?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12p.	12p.	Obsessions and/or compulsions — Does the participant repeatedly and excessively focus on particular ideas or activities, or have they developed new habits, like physical behaviors or stereotypical verbal phrases?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12q.	12q.	Explosive anger — Does the participant have a “short fuse”? Do they display explosive outbursts of anger or rage?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12r.	12r.	Substance use — Does the participant currently show evidence of excessive consumption of recreational, psychoactive, or typically abused substances (<i>substantial increase compared with prior habits, and beyond medical necessity if prescribed substance</i>)?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12r1.	12r1.	IF YES , record substance(s) involved: (Check all that apply)	12r1a. <input type="checkbox"/> ₁ Alcohol 12r1b. <input type="checkbox"/> ₁ Sedative/hypnotic 12r1c. <input type="checkbox"/> ₁ Opiate 12r1d. <input type="checkbox"/> ₁ Cocaine 12r1e. <input type="checkbox"/> ₁ Cannabis 12r1f. <input type="checkbox"/> ₁ Other (SPECIFY): _____		

12s.	12s.	If any of the personality–related behavioral changes in 12m–12r are present, at what age did they begin? (<i>The clinician must use their best judgment to estimate an age of onset. If multiple symptoms with different ages of onset are identified, denote the age of the earliest symptom.</i>) (777 = age provided at previous UDS visit)	— — —		
------	------	--	-------	--	--

IVP FVP Section 3 – Neuropsychiatric symptoms and behavioral changes continued...

		REM sleep	No	Yes	Unknown
12t.	12t.	REM sleep behavior disorder — While sleeping, does the participant appear to repeatedly act out their dreams (e.g., punch or flail their arms, shout, or scream)?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
12t1.	12t1.	IF YES , at what age did the dream enactment behavior begin? (The clinician must use their best judgment to estimate an age of onset.) (777 = age provided at previous UDS visit)	— — —		
12t2.	12t2.	Was REM sleep behavior disorder confirmed by polysomnography?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉

		Other	No	Yes	Unknown
12u.	12u.	Other behavioral changes (SPECIFY): _____	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	

If the participant exhibits a meaningful decline in any behavior other than those listed, select **1 = Yes** for Question 12u and briefly describe under "Other".

13.	13.	Overall mode of onset for behavioral changes: Indicate the mode of onset for the most prominent behavioral problem that is causing the participant's complaints and/or affecting the participant's function.	<input type="checkbox"/> ₁ Gradual	<input type="checkbox"/> ₄ Other (SPECIFY): _____
			<input type="checkbox"/> ₂ Subacute	
			<input type="checkbox"/> ₃ Abrupt	<input type="checkbox"/> ₉₉ Unknown

The clinician should choose the option that most closely resembles the mode of onset of behavioral symptoms for the participant. If the mode of onset was other than those listed, select **4 = Other** and briefly describe in the space provided. Select **99 = Unknown** only if no information is available to allow the clinician to ascertain the mode of onset.

Section 4 – Motor changes

Consider if the participant currently has meaningful change in motor function **that represents a change relative to a stable baseline prior to the current syndrome and is potentially due to a disorder affecting the central nervous system:**

14.	14.	Based on the clinician's judgment, is the participant currently experiencing any meaningful changes in motor function?	<input type="checkbox"/> ₀ No (SKIP TO QUESTION 19)
			<input type="checkbox"/> ₁ Yes

Decline or changes in motor/movement refers to meaningful decline from the participant's usual or customary level (for example, as evidenced by gait disorder, falls, tremor, and slowness) reported or observed at the current visit. If the clinician is certain that there have been no meaningful changes or decline in motor or movement, select **0 = No** and skip to Question 19. If the clinician is certain that there has been a meaningful decline, select **1 = Yes** and complete Questions 15 –18.

15.	15.	Indicate whether the participant has meaningful change in motor function:			
		Motor	No	Yes	Unknown

QUESTIONS 15a – 15h: If the symptoms assessed in Questions 15a – 15h are reported or observed to reflect the participant's condition at this clinical evaluation based upon information gathered from the participant, co-participant, medical records, and/or observation, then select **1 = Yes**; otherwise, select **0 = No**. Select **9 = Unknown** only if the answer cannot be determined based upon information gathered from the participant, co-participant, medical records, and/or observation.

15a.	15a.	Gait disorder — Has the participant's walking changed, not specifically due to arthritis, injury, or peripheral neuropathy? Are they unsteady, or do they shuffle when walking, have little or no arm-swing, or drag a foot?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
15b.	15b.	Falls — Has the participant had an increase in frequency of falls compared with their stable baseline prior to the current syndrome?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
15c.	15c.	Slowness — Has the participant noticeably slowed down in walking, moving, or writing by hand, other than due to an injury or illness?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
15d.	15d.	Tremors — Has the participant had rhythmic shaking, especially in the hands, arms, legs, head, mouth, or tongue?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
15e.	15e.	Limb weakness — Has the participant noticed a change (abrupt or gradual) in limb function such that an arm and/or leg is weak compared to their prior baseline?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉

IVP FVP Section 4 – Motor changes continued...

15f.	15f.	Change in facial expression — Has the participant's facial expression changed or become more "wooden," or masked and unexpressive?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
15g.	15g.	Change in speech — Has the participant noted a change in speech (<i>abrupt or gradual</i>) such that speech is slurred, or the ability to articulate the tongue and lips to form words and sentences has declined compared to their baseline?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
15h.	15h.	If changes in motor function are present in 15a–15g, at what age did they begin? (<i>The clinician must use their best judgment to estimate an age of onset. If multiple symptoms with different ages of onset are identified, denote the age of the earliest symptom.</i>) (777 = age provided at previous UDS visit)	_____		

Age of onset of motor symptoms should correspond to the predominant symptom that was first recognized as a change in the participant's motor function (Question 15 above). If the exact age is unknown, the clinician should estimate to the nearest decade. For example, if the co-participant says that motor symptoms started in the participant's 50s or 60s, estimate age 55 or 60. Do not enter the age of diagnosis (if applicable).

16.	16.	Mode of onset for motor changes: Indicate the mode of onset for the most prominent motor problem that is causing the participant's complaints and/or affecting the participant's function.	<input type="checkbox"/> ₁ Gradual <input type="checkbox"/> ₂ Subacute <input type="checkbox"/> ₃ Abrupt	<input type="checkbox"/> ₄ Other (SPECIFY): _____ <input type="checkbox"/> ₉₉ Unknown
-----	-----	---	---	--

Select the option that most closely resembles the mode of onset of motor symptoms for the participant. If the mode of onset was other than those listed, select **4 = Other (specify)** and briefly describe in the space provided. Select **99 = Unknown** only if no information is available to allow the clinician to ascertain the mode of onset.

		No	Yes	Unknown
17.	17.	Were changes in motor function suggestive of parkinsonism?		
		<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉

Select **1 = Yes** if one or more of the following symptoms is present: gait disorder, falls, slowness, tremor, change in facial expression, etc.

18.	18.	Were changes in motor function suggestive of amyotrophic lateral sclerosis (ALS) (<i>e.g., changes in muscle strength, or muscle twitches in one or more limbs, or slurred speech</i>)?	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉
-----	-----	---	---------------------------------------	---------------------------------------	---------------------------------------

Select **1 = Yes** if one or more of the following symptoms is present: weakness and/or muscle twitches in one or more limbs, slurred speech, etc.

Section 5 – Overall course of decline and predominant domain

19.	19.	Overall course of decline of cognitive/behavioral/motor syndrome:	<input type="checkbox"/> ₁ Gradually progressive <input type="checkbox"/> ₂ Stepwise <input type="checkbox"/> ₃ Static <input type="checkbox"/> ₄ Fluctuating <input type="checkbox"/> ₅ Improved <input type="checkbox"/> ₈ Not applicable <input type="checkbox"/> ₉ Unknown
-----	-----	---	---

Select the appropriate number to indicate the overall decline in cognitive/behavioral/motor functions during the course of the illness. Fluctuating course does not refer to the short-term fluctuations that are part of DLB. Select **9 = Unknown** only if no information is available to allow the clinician to describe the overall course of the syndrome.

20.	20.	Indicate the predominant domain that was first recognized as changed in the participant:	<input type="checkbox"/> ₁ Cognition <input type="checkbox"/> ₂ Behavior <input type="checkbox"/> ₃ Motor function <input type="checkbox"/> ₈ Not applicable <input type="checkbox"/> ₉ Unknown
-----	-----	---	--

Select the appropriate number to indicate which domain appears to be the first to have changed in the participant. Choose only one domain as predominantly changing first, based on the clinician's best judgment. Select **9 = Unknown** only if no information is available to allow the clinician to describe the predominantly changed domain.

GUIDANCE FOR COMPLETING D1a AND D1b

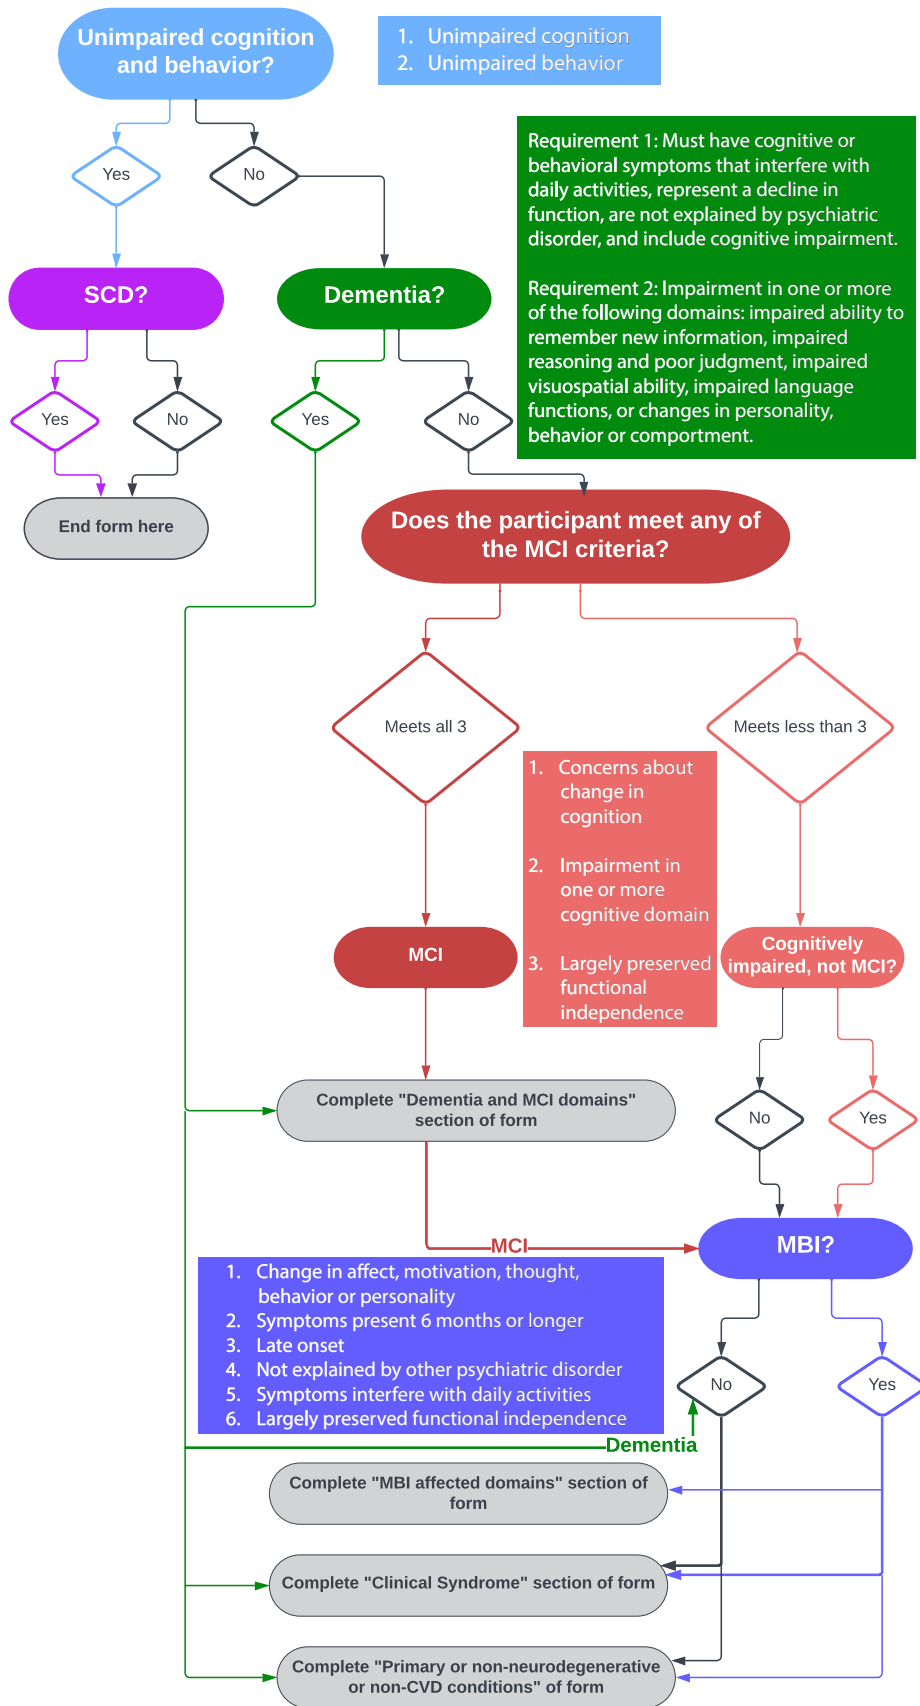

These two forms can be done flexibly based on the Center's workflow and without restrictive requirements.

One suggested practice is to have clinicians provisionally complete D1a at the time clinical assessment. D1a would be reviewed at consensus (along with the now available neuropsychological data) and the clinical staging and syndrome can be updated as needed. This would be followed by completing D1b after considering any available biomarker or imaging data.

Alternatively, Centers can complete both D1a and D1b at consensus. In this scenario, a good practice would be to review clinical information and neuropsychological data first while completing D1a (blind to biomarkers) followed by completion of D1b after reviewing any available biomarker or imaging data.

Coding Guidebook for Form D1a: Clinical Syndrome

INSTRUCTIONS: This form is to be completed by the clinician. Check only one box per question. The flowchart below provides an overview of Form D1a and the sections you fill out for each diagnosis.

1. 1. Diagnosis method—*responses in this form are based on diagnosis by a:*
 1 Single clinician 2 Formal consensus panel 3 Other (e.g., Two or more clinicians or other informal group)

Select **2=A formal consensus panel** (preferred method) if the diagnosis was made by a group of clinicians (e.g., neurologists, psychiatrists, neuropsychologists, geriatricians, advanced practice providers, etc.) who convene on a regular basis to discuss and decide upon the final diagnosis. It is preferable that each formal consensus panel have at least one neuropsychologist and one physician present. With new MBI criteria, psychiatry input is recommended. In the case of an ad hoc consensus group (e.g., two or more clinicians or other informal group), select **3=Other**.

Section 1 – Level of impairment – Unimpaired cognition, SCD, MCI/MBI, or dementia

2. 2. **Does the participant have:**
 1. Unimpaired cognition (e.g., cognitive performance and functional status (i.e., CDR) judged to be unimpaired)?
 AND
 2. Unimpaired behavior (i.e., the participant does not exhibit behavior sufficient to diagnose MBI - see MBI section starting at Q7) or dementia due to FTLD or LBD and/or FTLD behavior and language domains=0?
 0 No (SKIP TO QUESTION 3) 1 Yes (CONTINUE TO QUESTION 2a)
 Note: For those with longstanding cognitive impairment that does not represent a decline from their usual functioning, consider checking **Question 5b** for a diagnosis of “Cognitively Impaired, Not MCI/dementia”.

Select **1= Yes** if the participant has normal cognition and does not have behavioral symptoms or changes sufficient to diagnose MBI, MCI or dementia due to AD, FTD or DLB. “Unimpaired” is defined as: (1) Unimpaired cognition (for example, cognitive performance and functional status (i.e., CDR) judged to be unimpaired); and (2) Unimpaired behavior (i.e., the participant does not exhibit behavioral symptoms or changes sufficient to diagnose MBI, MCI, or dementia due to any cause such as AD, FTLD or LBD). Clinical judgment should be used in situations where testing and clinical history or observation are conflicting to determine a stage.

Subjective Cognitive Decline

2a. 2a. Does the participant report 1) significant concerns about changes in cognition **AND** 2) no neuropsychological evidence of decline **AND** 3) no functional decline? 0 No (END FORM HERE)
 1 Yes

Use your best clinical judgment based on your impression of the participant’s complaints and your review of the participant’s response to concerns about changes in cognition (refer to UDSv4 form A1, Section 2, Questions 18-20). If your Center administers the optional ECog or CCI or other measures, these may also be considered in responding to Question 2a. Considering all available information (3 SCD UDSv4 self report items, interview and exam, and optional ECog or CCI, if obtained), does the participant appear to perceive their cognitive functioning as having declined, especially over the past few years. Concerns would be regarded as “significant” if the participant a) sought medical attention for this issue, b) expresses concern, worry or anxiety related to perceived cognitive decline, or c) a knowledgeable informant and/or clinician also perceives changes in cognitive function. Clinicians less familiar with this area may find it helpful to review “The characterisation of subjective cognitive decline” by Jessen et al. (Lancet Neurology 2020; [https://doi.org/10.1016/S1474-4422\(19\)30368-0](https://doi.org/10.1016/S1474-4422(19)30368-0)).

2b. 2b. As a clinician, are you confident that the subjective cognitive decline is clinically meaningful? 0 No (END FORM HERE)
 1 Yes (END FORM HERE)

Provide a level of confidence based on the available information and your clinical judgement that clinically meaningful subjective cognitive decline is present.

Dementia criteria

Requirement #1:
 Participant has cognitive or behavioral (neuropsychiatric) symptoms that meet all of the following criteria:

- Interfere with ability to function as before at work or at usual activities
- Represent a decline from previous levels of functioning
- Are not explained by delirium or major psychiatric disorder
- Include cognitive impairment detected and diagnosed through a combination of: 1) history-taking; 2) objective assessment (bedside or neuropsychological testing)

Requirement #2:
 Participant must have impairment in one* or more of the following domains:

- Impaired ability to acquire and remember new information
- Impaired reasoning and handling of complex tasks, poor judgment
- Impaired visuospatial abilities
- Impaired language functions
- Changes in personality, behavior, or compoment

** In the event of single-domain impairment (e.g., language in PPA, behavior in bvFTD, visuospatial in posterior cortical atrophy, etc.), the participant must not fulfill criteria for MCI.*

3. 3. Does the participant meet criteria for dementia?
 0 No (**CONTINUE TO QUESTION 4**) 1 Yes (**SKIP TO QUESTION 6a**)

Review the criteria listed above Question 3 to determine whether the participant meets the criteria for all-cause dementia. These criteria are adapted from the McKhann all-cause dementia criteria (2011) to allow a single domain to be affected for a diagnosis of dementia.

MCI core clinical criteria

Check all criteria that apply in Q4.

4. 4. 1 Clinical concern about decline in cognition compared to participant’s prior level of lifelong or usual cognitive function (e.g., based on input from participant, co-participant, and/or the clinician’s judgment, CDR SB 0.5+, etc.)
 1 Impairment in one or more cognitive domains, compared to participant’s estimated prior level of lifelong or usual cognitive function, or supported by objective longitudinal neuropsychological evidence of decline
 1 Largely preserved functional independence OR functional dependence that is not related to cognitive decline (e.g., based on clinical judgment)

Please check all criteria that apply. If all three criteria are checked, choose **1=Yes (MCI)** for Q4b. If fewer than 3 criteria are met, choose **0=No** for Q4b and consider checking Question 5b for a diagnosis of “Cognitively Impaired, Not MCI/dementia” or a diagnosis of MBI on Question 7.

Refer to the criteria described in: *Albert MS, DeKosky ST, Dickson D, Dubois B, Feldman HH, Fox NC, Gamst A, Holtzman DM, Jagust WJ, Petersen RC, Snyder PJ, Carrillo MC, Thies B, Phelps CH. The diagnosis of mild cognitive impairment due to Alzheimer’s disease: recommendations from the National Institute on Aging-Alzheimer’s Association workgroups on diagnostic guidelines for Alzheimer’s disease. Alzheimers Dement. 2011 May;7(3):270-9. doi: 10.1016/j.jalz.2011.03.008. Epub 2011 Apr 21. PMID: 21514249; PMCID: PMC3312027.*

If all three criteria are checked, choose **1=Yes** for Q4b. If less than 3 criteria are met, choose **0=No** for Q4b. If only some of the criteria from Q4 are checked, with the exception of the third MCI criteria **alone**, consider a diagnosis of **cognitively impaired, not MCI/dementia** on Q5b. If **only** the third MCI criteria is met in Q4, select **0=No** for Q5b.

4b. 4b. Does the participant meet all three of the above criteria for MCI (amnesic or non-amnesic)?
 0 No (**CONTINUE TO QUESTION 5**)
 1 Yes (**SKIP TO QUESTION 6a**)

Cognitively impaired, not MCI/dementia

The purpose of the “Cognitively impaired, not MCI/dementia” category is to capture those individuals with evidence of cognitive impairment or decline who do not meet formal MCI criteria.

Check all applicable criteria for cognitively impaired, not MCI/dementia in Q5, using any relevant data.

5. 5. 1 Evidence of functional impairment (e.g., CDR SB>0 and/or FAS>0), but available cognitive testing is judged to be normal
 1 Cognitive testing is abnormal but no clinical concern or functional decline (e.g., CDR SB=0 and FAS=0)
 1 Longstanding cognitive difficulties, not representing a decline from their usual function (e.g., early developmental differences remote TBI, other medical condition with clear effects on cognition)
 1 Other (**SPECIFY**): _____

Please check all criteria that apply. If the participant has any conditions contributing to impairment (e.g., substance abuse or medications), these should be identified in Section 3.

If the cognitive impairment is of recent onset (i.e., not longstanding impairment), indicate the cognitive symptom(s) in Form B9 - Clinician Judgment of Symptoms.

5b. 5b. Does the participant meet any criteria for cognitively impaired, not MCI/dementia?
 0 No (**SKIP TO QUESTION 7**)
 1 Yes (**SKIP TO QUESTION 7**)

Affected Domains - Dementia and MCI

Choose domains that are impaired at the current visit based on clinical judgment informed by clinical history and neuropsychological testing. Select one or more as **Impaired**; all others will default to **unimpaired** in the NACC database.

Note on **behavior changes**: For patients with *dementia* who have behavior changes, record the presence of behavioral changes here (not in the following MBI section) by marking Q6f as **Impaired** and skipping the MBI section (**SKIP TO Q8**). For behavioral changes in the context of an MCI (or as an isolated) symptom, consider a diagnosis of MBI in the next section.

			Impaired
6a.	6a.	Memory	<input type="checkbox"/> 1
6b.	6b.	Language	<input type="checkbox"/> 1
6c.	6c.	Attention	<input type="checkbox"/> 1
6d.	6d.	Executive	<input type="checkbox"/> 1
6e.	6e.	Visuospatial	<input type="checkbox"/> 1
6f.	6f.	Behavioral (for participants with dementia only; see MBI for MCI participants)	<input type="checkbox"/> 1
6g.	6g.	Apraxia	<input type="checkbox"/> 1

Mild Behavioral Impairment (MBI) core clinical criteria

Neuropsychiatric and other behavioral symptoms are common in ADRC participants as recorded in several ratings such as GDS and NPI-Q. Multiple studies have shown that their presence accelerates onset of MCI and or dementia. Mild Behavioral Impairment (MBI) is a novel syndrome that can be the prodrome of many types/etiologies of dementia. The purpose of this section is to further classify the phenotype and possible causes of neuropsychiatric and other behavioral symptoms recorded in other sections of the UDS4. The first step here is to assess whether or not such symptoms meet diagnostic criteria for MBI and to characterize the MBI phenotype (e.g., affective, motivational, etc.). Later in the form the rater(s) are asked to assess the contribution of specific DSM-5-TR psychiatric disorders to the emergence of these symptoms. **For these discussions, if possible, it is recommended that a (geriatric) psychiatrist be involved in these case discussions and reference to DSM-5-TR be available.** All Centers should have access through their online library access to the DSM-5TR so as to review the relevant DSM-5-TR criteria.

Begin with review of neuropsychiatric and other behavioral symptoms rated on the GDS, NPI-Q, form B9 (or any other relevant symptom ratings that your Center uses such as the [Mild Behavioral Impairment checklist \(MBI-C\)](#)). **If no such symptoms are recorded a diagnosis of MBI cannot be made and you can check “No” to question 7 and skip to question 8.**

If neuropsychiatric and other behavioral symptoms are recorded on one or more of these ratings these should be the basis for considering a diagnosis of MBI. Specifically, based on these ratings, assess whether the participant, co-participant, or clinician **identify a change** in the participant’s affect, motivation, thought content, behavior, or personality that is clearly different from their usual affect, motivation, thought content, behavior, or personality. If the answer is **NO, a diagnosis of MBI cannot be made and you can check “No” to question 7 and skip to question 8.**

If **YES** to the above, to make a diagnosis of MBI **ALL** of the following must be true about these symptoms (using best clinical judgment):

- They have been present at least intermittently for the last six months or longer.
- They have onset later in life (i.e., age > ~50, unless early onset neurodegenerative syndrome is suspected).
- They CANNOT be explained by delirium, other psychiatric disorder by DSM –5TR criteria (including persistently symptomatic longstanding disorder **OR** recurrent long-standing disorder).
- They interfere with at least one of these: work, interpersonal relationships, social activities.
- There is largely preserved independence in other functional abilities (no change from prior manner/level of functioning or uses minimal aids or assistance).

For additional training information, please refer to the following clinical training webinars on the NACC website:

- [Mild Behavioral Impairment Webinar](#)
- [Operationalizing “Impaired, not MCI” in UDSv4](#)
- [D1a Form Training](#)

- Participant, co-participant, or clinician identifies a change in the participant’s affect, motivation, thought content, behavior, or personality that is clearly different from their usual affect, motivation, thought content, behavior, or personality
- Symptoms have been present at least intermittently for the last six months or longer
- Late onset (i.e., age > ~50, unless early onset neurodegenerative syndrome is suspected)
- Not explained by delirium, other psychiatric disorder by DSM criteria (including recent onset, longstanding or recurrence of longstanding disorder).
- Symptoms interfere with at least one of these: work, interpersonal relationships, social activities
- Largely preserved independence in other functional abilities (no change from prior manner/level of functioning, or uses minimal aids or assistance)

7. 7. Does the participant meet criteria for MBI? (If participant meets criteria for dementia an MBI diagnosis is excluded.) 0 No (SKIP TO QUESTION 8) 1 Yes (CONTINUE TO QUESTION 7a)

Review the criteria listed above Question 7 to determine whether the participant meets the criteria for MBI. If a participant meets the criteria for dementia in Question 3, select **0 = No** for Q7.

MBI affected domains — Select one or more affected domains

(Note: If “Yes” is indicated in any domain below, the participant should have a corresponding symptom checked on Form B9 — Clinician Judgment of Symptoms, either from among the specific symptoms denoted there, or in “other”)

			No	Yes
7a.	7a.	Motivation (e.g., apathy symptoms on Form B9)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁

Section 2 – Clinical syndrome

The purpose of Section 2 is to assign a predominant clinical syndrome to participants with dementia and, when appropriate MCI or MBI, using all available clinical, exam, and neuropsychiatric data. This should be done using clinical information and cognitive/neuropsychological testing, **ideally without reference to biomarker data** (which is incorporated into the Etiological Diagnoses section in Form D1b). This is not always possible and thus Q9 allows centers to record when biomarker data is known and may have influenced the clinical diagnosis.

A single syndrome should be assigned and clinical judgment used to determine the most prominent symptoms. If middle or late stages, use the initial presenting issues to determine a predominant syndrome (i.e., *amnestic vs dysexecutive, which usually co-occur*).

8.	8.	Is there a predominant clinical syndrome? <i>Note that the participant may not meet any clinical criteria or may not have a predominant syndrome (for instance, this is common for MCI and “impaired, not MCI”). In this case, select “No.”</i>	<input type="checkbox"/> ₀ No (SKIP TO QUESTION 10)	<input type="checkbox"/> ₁ Yes
----	----	--	---	---

Select the predominant syndrome as present; all others will default to Absent in the NACC database.

Present

8a.	8a.	Amnestic predominant syndrome	<input type="checkbox"/> ₁
-----	-----	-------------------------------	---------------------------------------

A clinical syndrome defined by the presence of persistent, predominant, and progressive decline for over 6 months in episodic anterograde memory function. Objective deficits on delayed memory recall testing are a central feature. Other cognitive domains may also be involved but did not precede the primary episodic anterograde memory deficit.

Exclusion criteria include a history of sudden onset or active primary psychiatric conditions that could better explain episodic memory testing.

Dubois B, Feldman HH, Jacova C, Dekosky ST, Barberger-Gateau P, Cummings J, Delacourte A, Galasko D, Gauthier S, Jicha G, Meguro K, O’Brien J, Pasquier F, Robert P, Rossor M, Salloway S, Stern Y, Visser PJ, Scheltens P. Research criteria for the diagnosis of Alzheimer’s disease: revising the NINCDS-ADRDA criteria. Lancet Neurol. 2007 Aug;6(8):734-46. doi: 10.1016/S1474-4422(07)70178-3. PMID: 17616482.

8b.	8b.	Dysexecutive predominant syndrome	<input type="checkbox"/> ₁
-----	-----	-----------------------------------	---------------------------------------

A clinical syndrome defined by the presence of persistent, predominant and progressive decline for over 6 months in any core executive cognitive function (i.e. working memory, cognitive flexibility and/or inhibition) in the absence of predominant behavioural features (e.g. would not meet criteria for the clinical syndrome of behavioural variant frontotemporal dementia).

Evidence of impaired executive functions are obtained by participant and/or co-participant reports in conjunction with formal evaluation of cognitive performance on mentally effortful tasks that require conscious active manipulation of abstract and/or simultaneous information streams.

Exclusion criteria include a history of sudden onset or other medical conditions severe enough to account for related symptoms (e.g. primary psychiatric, cerebrovascular, infectious, toxic, inflammatory or metabolic disorders).

Townley RA, Graff-Radford J, Mantyh WG, Botha H, Polsinelli AJ, Przybelski SA, Machulda MM, Makhlof AT, Senjem ML, Murray ME, Reichard RR, Savica R, Boeve BF, Drubach DA, Josephs KA, Knopman DS, Lowe VJ, Jack CR Jr, Petersen RC, Jones DT. Progressive dysexecutive syndrome due to Alzheimer’s disease: a description of 55 cases and comparison to other phenotypes. Brain Commun. 2020;2(1):fcaa068. doi: 10.1093/braincomms/fcaa068. Epub 2020 May 27. PMID: 32671341; PMCID: PMC7325839.

8c. 8c. Primary visual presentation (such as posterior cortical atrophy (PCA) syndrome)

 1

A clinical syndrome defined by a gradually progressive decline in visual processing and other posterior cognitive functions. Cognitive features must include at least three of the following as early or presenting features:

Space perception deficit	Alexia
Simultanagnosia	Left/right disorientation
Object perception deficit	Acalculia
Constructional dyspraxia	Limb apraxia (not limb-kinetic)
Environmental agnosia	Apperceptive prosopagnosia
Oculomotor apraxia	Agraphia
Dressing apraxia	Homonymous visual field defect
Optic ataxia	Finger agnosia

Supportive neuroimaging features:

- Predominant occipito-parietal or occipito-temporal pattern found in any of the following imaging modalities:
 - Atrophy on CT/MRI
 - Hypometabolism on FDG-PET
 - Hypoperfusion on SPECT

There is a relatively spared function in the following cognitive domains: anterograde memory, speech and language, executive, and behavior in the early stages.

Exclusion criteria include:

- A brain tumor or mass sufficient to explain symptoms
- Significant vascular disease including focal stroke sufficient to explain symptoms
- Evidence of afferent visual cause (e.g., optic nerve, chiasm, or tract damage)
- Evidence of other identifiable causes for cognitive impairment (e.g., renal failure)

*Crutch SJ, Schott JM, Rabinovici GD, Murray M, Snowden JS, van der Flier WM, Dickerson BC, Vandenberghe R, Ahmed S, Bak TH, Boeve BF, Butler C, Cappa SF, Ceccaldi M, de Souza LC, Dubois B, Felician O, Galasko D, Graff-Radford J, Graff-Radford NR, Hof PR, Krolak-Salmon P, Lehmann M, Magnin E, Mendez MF, Nestor PJ, Onyike CU, Pelak VS, Pijnenburg Y, Primativo S, Rossor MN, Ryan NS, Scheltens P, Shakespeare TJ, Suárez González A, Tang-Wai DF, Yong KXX, Carrillo M, Fox NC; Alzheimer's Association ISTAART Atypical Alzheimer's Disease and Associated Syndromes Professional Interest Area. Consensus classification of posterior cortical atrophy. *Alzheimers Dement*. 2017 Aug;13(8):870-884. doi: 10.1016/j.jalz.2017.01.014. Epub 2017 Mar 2. PMID: 28259709; PMCID: PMC5788455.*

8d. 8d. Primary progressive aphasia (PPA) syndrome:

 1

Select 1=Present if the participant meets the core clinical criteria for PPA.

ROOT DIAGNOSIS OF PRIMARY PROGRESSIVE APHASIA (PPA)¹

Both core criteria must be present:

1. Most prominent clinical feature is a new and progressive difficulty with language (i.e., retrieving, using, repeating, sequencing, or understanding words).
2. The language disorder (aphasia) should be the most prominent deficit at symptom onset and for the initial phases of the disease.

¹Mesulam, M.-M., 2003. Primary progressive aphasia: A language-based dementia. *New England Journal of Medicine* 348, 1535-1542.

Criteria for the semantic variant PPA

I. Clinical diagnosis of semantic variant PPA

Both of the following core features must be present:

1. Impaired confrontation naming
2. Impaired single-word comprehension

At least 3 of the following other diagnostic features must be present:

1. Impaired object knowledge, particularly for low-frequency or low-familiarity items
2. Surface dyslexia or dysgraphia
3. Spared repetition
4. Spared speech production (grammar and motor speech)

II. Imaging-supported semantic variant PPA diagnosis

Both of the following criteria must be present:

1. Clinical diagnosis of semantic variant PPA
2. Imaging must show one or more of the following results:
 - a. Predominant anterior temporal lobe atrophy
 - b. Predominant anterior temporal lobe hypoperfusion or hypometabolism on SPECT or PET

III. Semantic variant PPA with definite pathology

Clinical diagnosis (criterion 1 below) and either criterion 2 or 3 must be present:

1. Clinical diagnosis of semantic variant PPA
2. Histopathologic evidence of a specific neurodegenerative pathology (e.g., FTLT-tau, FTLT-TDP, AD, other)
3. Presence of a known pathogenic mutation

Abbreviations: AD = Alzheimer's disease; FTLT = frontotemporal lobar degeneration; PPA = primary progressive aphasia

Diagnostic criteria for logopenic variant PPA

I. Clinical diagnosis of logopenic variant PPA

Both of the following core features must be present:

1. Impaired single-word retrieval in spontaneous speech and naming
2. Impaired repetition of sentences and phrases

At least 3 of the following other features must be present:

1. Speech (phonologic) errors in spontaneous speech and naming
2. Spared single-word comprehension and object knowledge
3. Spared motor speech
4. Absence of frank agrammatism

II. Imaging-supported logopenic variant diagnosis

Both criteria must be present:

1. Clinical diagnosis of logopenic variant PPA
2. Imaging must show at least one of the following results:
 - a. Predominant left posterior perisylvian or parietal atrophy on MRI
 - b. Predominant left posterior perisylvian or parietal hypoperfusion or hypometabolism on SPECT or PET

III. Logopenic variant PPA with definite pathology

Clinical diagnosis (criterion 1 below) and either criterion 2 or 3 must be present

1. Clinical diagnosis of logopenic variant PPA
2. Histopathologic evidence of a specific neurodegenerative pathology (e.g. AD, FTLT-tau, FTLT-TDP, other)
3. Presence of a known pathogenic mutation

Diagnostic features for the nonfluent/agrammatic variant PPA

I. Clinical diagnosis of nonfluent/agrammatic variant PPA

At least one of the following core features must be present:

1. Agrammatism in language production
2. Effortful, halting speech with inconsistent speech sound errors and distortions (apraxia of speech)

At least 2 of 3 of the following other features must be present:

1. Impaired comprehension of syntactically complex sentences
2. Spared single-word comprehension
3. Spared object knowledge

II. Imaging-supported nonfluent/agrammatic variant diagnosis

Both of the following criteria must be present:

1. Clinical diagnosis of nonfluent/agrammatic variant PPA
2. Imaging must show one or more of the following results:
 - a. Predominant left posterior fronto-insular atrophy on MRI or
 - b. Predominant left posterior fronto-insular hypoperfusion or hypometabolism on SPECT or PET

III. Nonfluent/agrammatic variant PPA with definite pathology

Clinical diagnosis (criterion 1 below) and either criterion 2 or 3 must be present:

1. Clinical diagnosis of nonfluent/agrammatic variant PPA
2. Histopathologic evidence of a specific neurodegenerative pathology (e.g., FTLT-tau, FTLT-TDP, AD, other)
3. Presence of a known pathogenic mutation

Abbreviations: AD = Alzheimer's disease; FTLT = frontotemporal lobar degeneration; PPA = primary progressive aphasia

Diagnostic features for primary progressive apraxia of speech

A clinical syndrome defined by a gradually progressive impairment in planning and programming movements required for speech production. There is generally phonetic (sound level errors, distorted substitutions and additions), and/or prosodic impairment (slow rate or segmented speech).

Clinical criteria include:

- Insidious onset and progressive worsening of speech disturbance
- Apraxia of speech is the only or dominant speech disturbance at the time of testing
- Dysarthria can be present but must be less severe than the apraxia of speech
- Any evidence of aphasia is considered equivocal

Supportive clinical speech features:

- Slow overall speech rate
- Lengthened intersegment durations
- Increased sound distortions or distorted sound substitutions with increased length of syllables (i.e., -cat, catnip, catapult, catastrophe)
- Syllable segmentation within words > 1 syllable and/or across words in phrases/sentences
- Audible or visible articulatory groping; speech initiation difficult, false starts/restarts
- Lengthened vowel and/or consonant segments
- Sound prolongations (beyond lengthened segments)
- Deliberate, slowly sequenced, segmented and/or distorted speech sequential motion rates in comparison with speech alternating motion rates
- Inaccurate (off-target in place or manner) speech alternating motion rates (as in rapid repetition of puh, puh, puh)
- Reduced words per speech breath group relative to maximum vowel duration

Exclusion criteria include:

- Pattern of deficits are better accounted for by other nondegenerative nervous system or medical disorders
- Cognitive disturbance is better accounted for by a psychiatric diagnosis
- Unequivocal evidence of aphasia on detailed language/neuropsychiatric testing (i.e. – patient may meet root criteria for primary progressive aphasia)
- Dysarthria is deemed more severe than apraxia of speech
- Prominent initial deficits in the following cognitive domains: episodic memory, visuo-perceptual, or behavioral
- Prominent initial symptoms that may meet criteria for other overlapping clinical syndromes: progressive supranuclear palsy, corticobasal syndrome, or motor neuron disease.

Botha H, Josephs KA. Primary Progressive Aphasias and Apraxia of Speech. *Continuum (Minneapolis, Minn)*. 2019 Feb;25(1):101-127. doi: 10.1212/CON.0000000000000699. PMID: 30707189; PMCID: PMC6548538.

IVP	FVP	Section 2 – Clinical syndrome	continued...
-----	-----	-------------------------------	--------------

8d1.	8d1.	If present, select one: <input type="checkbox"/> 1 Semantic PPA <input type="checkbox"/> 2 Logopenic PPA <input type="checkbox"/> 3 Nonfluent/agrammatic PPA <input type="checkbox"/> 4 Primary progressive apraxia of speech <input type="checkbox"/> 5 PPA other/not otherwise specified
------	------	--

Review the criteria above and select the PPA subtype. Select **5=PPA other/not otherwise specified** if the participant meets the core clinical criteria for PPA but cannot be further classified as logopenic, semantic, nonfluent/agrammatic, or primary progressive apraxia of speech.

8e.	8e.	Behavioral variant frontotemporal (bvFTD) syndrome	<input type="checkbox"/> 1
-----	-----	--	----------------------------

Select 1=Present if the participant meets the core clinical criteria for bvFTD below.

International consensus criteria for behavioural variant FTD (FTDC)

I. Neurodegenerative disease

The following symptom must be present to meet criteria for bvFTD.

- A. Shows progressive deterioration of behaviour and/or cognition by observation or history (as provided by a knowledgeable informant).

II. Possible bvFTD

Three of the following behavioural/cognitive symptoms (A–F) must be present to meet criteria. Ascertainment requires that symptoms be persistent or recurrent, rather than single or rare events.

- A. Early* behavioural disinhibition [one of the following symptoms (A1–A3) must be present]:
 - A1. Socially inappropriate behaviour
 - A2. Loss of manners or decorum
 - A3. Impulsive, rash or careless actions
- B. Early apathy or inertia [one of the following symptoms (B1–B2) must be present]:
 - B1. Apathy
 - B2. Inertia
- C. Early loss of sympathy or empathy [one of the following symptoms (C1–C2) must be present]:
 - C1. Diminished response to other people's needs and feelings
 - C2. Diminished social interest, interrelatedness or personal warmth
- D. Early perseverative, stereotyped or compulsive/ritualistic behaviour [one of the following symptoms (D1–D3) must be present]:
 - D1. Simple repetitive movements
 - D2. Complex, compulsive or ritualistic behaviours
 - D3. Stereotypy of speech
- E. Hyperorality and dietary changes [one of the following symptoms (E1–E3) must be present]:
 - E1. Altered food preferences
 - E2. Binge eating, increased consumption of alcohol or cigarettes
 - E3. Oral exploration or consumption of inedible objects
- F. Neuropsychological profile: executive/generation deficits with relative sparing of memory and visuospatial functions [all of the following symptoms (F1–F3) must be present]:
 - F1. Deficits in executive tasks
 - F2. Relative sparing of episodic memory
 - F3. Relative sparing of visuospatial skills

III. Probable bvFTD

All of the following symptoms (A–C) must be present to meet criteria.

- A. Meets criteria for possible bvFTD
- B. Exhibits significant functional decline (by caregiver report or as evidenced by Clinical Dementia Rating Scale or Functional Activities Questionnaire scores)
- C. Imaging results consistent with bvFTD [one of the following (C1–C2) must be present]:
 - C1. Frontal and/or anterior temporal atrophy on MRI or CT
 - C2. Frontal and/or anterior temporal hypoperfusion or hypometabolism on PET or SPECT

IV. Behavioural variant FTD with definite FTLN pathology

Criterion A and either criterion B or criterion C must be present to meet criteria.

- A. Meets criteria for possible or probable bvFTD
- B. Histopathological evidence of FTLN on biopsy or at post-mortem
- C. Presence of a known pathogenic mutation

V. Exclusionary criteria for bvFTD

Criteria A and B must be answered negatively for any bvFTD diagnosis. Criterion C can be positive for possible bvFTD but must be negative for probable bvFTD.

- A. Pattern of deficits is better accounted for by other non-degenerative nervous system or medical disorders
- B. Behavioural disturbance is better accounted for by a psychiatric diagnosis

**As a general guideline, "early" refers to symptom presentation within the first 3 years.
bvFTD = behavioral variant FTD*

8f.

8f.

Lewy body syndrome

□ 1

Select **1=Present** if the participant meets criteria below for the clinical diagnosis of dementia with Lewy bodies (DLB).

Revised (2017¹) criteria for the clinical diagnosis of dementia with Lewy Bodies (DLB):

1. Essential for a diagnosis of DLB is dementia, defined as a progressive cognitive decline of sufficient magnitude to interfere with normal social or occupational functions, or with usual daily activities. Prominent or persistent memory impairment may not necessarily occur in the early stages but is usually evident with progression. Deficits on tests of attention, executive function, and visuospatial ability may be especially prominent and occur early.
2. Core clinical features (the first 3 typically occur early and may persist throughout the course):
 - Fluctuating cognition with pronounced variations in attention and alertness.
 - Recurrent visual hallucinations that are typically well-formed and detailed.
 - REM sleep behavior disorder, which may precede cognitive decline.
 - One or more spontaneous cardinal features of parkinsonism: these are bradykinesia (defined as slowness of movement and decrement in amplitude or speed), rest tremor, or rigidity.
3. Supportive clinical features:
 - Severe sensitivity to antipsychotic agents; postural instability.
 - Repeated falls.
 - Syncope or other transient episodes of unresponsiveness.
 - Severe autonomic dysfunction, e.g., constipation, orthostatic hypotension, urinary incontinence.
 - Hypersomnia.
 - Hyposmia.
 - Hallucinations in other modalities.
 - Systematized delusions.
 - Apathy.
 - Anxiety.
 - Depression.
4. Indicative biomarkers:
 - Reduced dopamine transporter uptake in basal ganglia demonstrated by SPECT or PET.
 - Abnormal (low-uptake) ¹²³Iodine-MIBG myocardial scintigraphy.
 - Polysomnographic confirmation of REM sleep without atonia.
5. Supportive biomarkers:
 - Relative preservation of medial temporal lobe structures on CT/MRI scan.
 - Generalized low uptake on SPECT/PET perfusion/metabolism scan with reduced occipital activity & the cingulate island sign on FDG-PET imaging.
 - Prominent posterior slow-wave activity on EEG with periodic fluctuations in the pre-alpha/theta range.
6. Probable DLB can be diagnosed if:
 - a) Two or more core clinical features of DLB are present, with or without the presence of indicative biomarkers, or
 - b) Only one core clinical feature is present, but with one or more indicative biomarkers. Probable DLB should not be diagnosed on the basis of biomarkers alone.
7. Possible DLB can be diagnosed if:
 - a) Only one core clinical feature of DLB is present, with no indicative biomarker evidence, or
 - b) One or more indicative biomarkers is present but there are no core clinical features.
8. DLB is less likely:
 - In the presence of any other physical illness or brain disorder including cerebrovascular disease, sufficient to account in part or in total for the clinical picture, although these do not exclude a DLB diagnosis and may serve to indicate mixed or multiple pathologies contributing to the clinical presentation.
 - If parkinsonian features are the only core clinical feature and appear for the first time at a stage of severe dementia.

DLB should be diagnosed when dementia occurs before or concurrently with parkinsonism. The term Parkinson disease dementia (PDD) should be used to describe dementia that occurs in the context of well-established Parkinson disease. In a practice setting the term that is most appropriate to the clinical situation should be used, and generic terms such as Lewy body disease are often helpful. In research studies in which distinction needs to be made between DLB and PDD, the existing 1-year rule between the onset of dementia and parkinsonism continues to be recommended.

(For more information on the criteria above, visit the website of the Lewy Body Dementia Association at <https://www.lbda.org/>)

¹Recommendations for the clinical diagnosis of DLB by the Dementia with Lewy Bodies Consortium.

McKeith IF, Boeve BF, Dickson DW, et al. Diagnosis and management of dementia with Lewy bodies: Fourth consensus report of the DLB Consortium, *Neurology* 2017; 89: 88-100.

8f1.	8f1.	<p>If present, select one:</p> <p><input type="checkbox"/> 1 Dementia with Lewy bodies</p> <p><input type="checkbox"/> 2 Parkinson's disease</p> <p><input type="checkbox"/> 3 Parkinson's disease dementia syndrome</p>
------	------	--

Review the criteria above and select the Lewy body syndrome subtype.

Criteria for Parkinson's disease

A clinical syndrome defined by a gradually progressive motor parkinsonism due to clinically established or clinically probable Parkinson's disease. Diagnosing Parkinson's disease requires a 2-step process:

Step 1: The first essential criterion is parkinsonism, which is defined as:

- **Bradykinesia** (slowness of movement) +/- hypokinesia (decrement in amplitude or speed as movements are continued) in combination with at least 1 of the following:
 - **Rest tremor** (4-6 hz tremor in the fully resting limb, suppressed during movement initiation, but may re-emerge with prolonged posture)
 - **Rigidity** (lead-pipe resistance to passive movement)

Step 2: Diagnosing either clinically established Parkinson's disease or clinically probable Parkinson's disease.

Diagnosis of clinically established Parkinson's disease requires:

1. Absence of absolute exclusion criteria
2. At least two supportive criteria
3. No red flags

Diagnosis of clinically probable Parkinson's disease requires:

1. Absence of absolute exclusion criteria
2. Presence of red flags is counterbalanced by supportive criteria
 - a. If one red flag is present there must be at least one supportive criterion; if two red flags, at least two supportive criteria are needed.
 - b. If more than two red flags, clinically probable PD cannot be diagnosed

Supportive criteria:

1. Clear and dramatic beneficial response to dopaminergic therapy. To meet this criterion, during initial treatment, patients should have returned to normal or near-normal level of function.
2. Presence of levodopa-induced dyskinesia
3. Rest tremor of a limb, documented on clinical examination (in the past, or on current examination)
4. Positive results from at least one ancillary diagnostic test having a specificity greater than 80% for differential diagnosis of PD from other parkinsonian conditions. Currently available tests that meet this criterion include:
 - a. Olfactory loss (in the anosmic or clearly hyposmic range, adjusted for age and sex)
 - b. Metaiodobenzylguanidine (MIBG) scintigraphy clearly documenting cardiac sympathetic denervation

Red Flags

1. Rapid progression of gait impairment requiring regular use of wheelchair within 5 years of onset
2. A complete absence of progression of motor symptoms or signs over 5 or more years unless stability is related to treatment
3. Early bulbar dysfunction, defined as one of severe dysphonia, dysarthria (speech unintelligible most of the time), or severe dysphagia (requiring soft food, NG tube, or gastrostomy feeding) within the first 5 years of disease
4. Inspiratory respiratory dysfunction defined as either diurnal or nocturnal inspiratory stridor or frequent inspiratory sighs
5. Severe autonomic failure in the first 5 years of disease.
6. Recurrent (>1/y) falls because of impaired balance within 3 years of onset.
7. The presence of disproportionate anterocollis (dystonic in nature) or contractures of hand or feet within the first 10 years.
8. Absence of any of the common nonmotor features of disease despite 5 years disease duration. These include:
 - Sleep dysfunction: sleep-maintenance insomnia, excessive daytime somnolence, symptoms of rapid eye movement sleep behavior disorder
 - Autonomic dysfunction: constipation, daytime urinary urgency (ie, not simply nocturia), symptomatic orthostasis
 - Hyposmia
 - Psychiatric dysfunction: depression, anxiety, or hallucinations
9. Otherwise unexplained pyramidal tract signs, defined as pyramidal weakness or clear pathologic hyperreflexia (excluding mild reflex asymmetry in the more affected limb, and isolated extensor plantar response).
10. Bilateral symmetric parkinsonism throughout the disease course. The patient or caregiver reports bilateral symptom onset with no side predominance, and no side predominance is observed on objective examination.

Absolute Exclusion Criteria

For all absolute exclusion criteria and red flags, the criterion is assumed to not be met because of an alternate unrelated cause. For example, unilateral cerebellar abnormalities attributable to a cerebellar hemisphere stroke, or a wheelchair-bound state attributable to spinal cord injury would not necessarily be exclusion criteria.

The presence of any of these features rules out Parkinson's disease:

1. Unequivocal cerebellar abnormalities on examination, such as cerebellar gait, limb ataxia, or cerebellar oculomotor abnormalities (eg, sustained gaze-evoked nystagmus, macro square wave jerks, hypermetric saccades)
2. Downward vertical supranuclear gaze palsy, or selective slowing of downward vertical saccades
3. Diagnosis of probable behavioral variant frontotemporal dementia or primary progressive aphasia, defined according to consensus criteria within the first 5 y of disease
4. Parkinsonian features restricted to the lower limbs for more than 3 y
5. Treatment with a dopamine receptor blocker or a dopamine-depleting agent in a dose and time course consistent with drug-induced parkinsonism
6. Absence of observable response to high-dose levodopa despite at least moderate severity of disease
7. Unequivocal cortical sensory loss (ie, graphesthesia, stereognosis with intact primary sensory modalities), clear limb ideomotor apraxia, or progressive aphasia
8. Normal functional neuroimaging of the presynaptic dopaminergic system
9. Documentation of an alternative condition known to produce parkinsonism and plausibly connected to the patient's symptoms, or the expert evaluating physician, based on the full diagnostic assessment, believes that an alternative syndrome is more likely than PD.

Postuma RB, Berg D, Stern M, Poewe W, Olanow CW, Oertel W, Obeso J, Marek K, Litvan I, Lang AE, Halliday G, Goetz CG, Gasser T, Dubois B, Chan P, Bloem BR, Adler CH, Deuschl G. MDS clinical diagnostic criteria for Parkinson's disease. *Mov Disord*. 2015 Oct;30(12):1591-601. doi: 10.1002/mds.26424. PMID: 26474316.

IVP	FVP	Section 2 – Clinical syndrome	continued...
-----	-----	--------------------------------------	--------------

8g.	8g.	Non-amnestic multidomain syndrome, not PCA, PPA, bvFTD, or DLB syndrome	<input type="checkbox"/> 1
-----	-----	---	----------------------------

This category of dementia syndrome refers to those with a pattern of test results on the neuropsychological battery in which the typical memory-predominant pattern of deficits is not present. This category would be used for subjects who fit none of the other defined syndromes in Questions 8c – 8f (i.e., PPA syndrome, primary visual presentation (such as posterior cortical atrophy (PCA) syndrome), the typical pattern of psychomotor slowing and visuospatial cognitive and behavioral deficits associated with DLB [reference Ferman T, *Clin Neuropsychol* 20:623, 2006], nor the executive deficits seen with bvFTD).

Clin Neuropsychol. 2006 Dec;20(4):623-36. Neuropsychological differentiation of dementia with Lewy bodies from normal aging and Alzheimer's disease. Ferman TJ1, Smith GE, Boeve BF, Graff-Radford NR, Lucas JA, Knopman DS, Petersen RC, Ivnik RJ, Wszolek Z, Uitti R, Dickson DW.

8h.	8h.	Primary supranuclear palsy (PSP) syndrome	<input type="checkbox"/> 1
-----	-----	---	----------------------------

Excerpted from Höglinger et al. (2017):

B1: Mandatory inclusion criteria

1. Sporadic occurrence*
2. Age 40 or older at onset** of first PSP-related symptom***
3. Gradual progression of PSP-related symptoms***

Core Features: We propose four core functional domains as characteristic clinical manifestations of PSP (ocular motor dysfunction [O], postural instability [P], akinesia [A], and cognitive dysfunction [C]). In each domain, we propose three characteristic core clinical features, stratified by presumed levels of certainty (1 [highest], 2 [mid], and 3 [lowest]) that they contribute to the diagnosis of PSP.

LEVELS OF CERTAINTY	OCULAR MOTOR DYSFUNCTION	POSTURAL INSTABILITY	AKINESIA	COGNITIVE DYSFUNCTION
LEVEL 1	O1: Vertical supranuclear gaze palsy	P1: Repeated unprovoked falls within 3 years	A1: Progressive gait freezing within 3 years	C1: Speech/language disorder (i.e., nonfluent/agrammatic variant of primary progressive aphasia or progressive apraxia of speech)
LEVEL 2	O2: Slow velocity of vertical saccades	P2: Tendency to fall on the pull-test within 3 years	A2: Parkinsonism, akinetic-rigid predominantly axial, and levodopa resistant	C2: Frontal cognitive/behavioral presentation
LEVEL 3	O3: Frequent macro square wave jerks or "eyelid opening apraxia"	P3: More than two steps backward on the pull-test within 3 years	A3: Parkinsonism, with tremor and/or asymmetric and/or levodopa responsive	C3: Corticobasal syndrome

- Supportive Imaging findings
 - IF1 - Predominant midbrain atrophy on MRI or hypometabolism on FDG-PET
 - IF2 - Postsynaptic striatal dopaminergic degeneration

Guidance for Richardson's vs Non-Richardson's Syndromes

- Richardson's syndrome: (PSP-RS)
 - (P1 or P2) + (O1 or O2)
- Non-Richardson's phenotypes:
 - Probable PSP with progressive gait freezing (PSP-PGF)
 - (O1 or O2) + A1
 - Probable PSP with predominant parkinsonism (PSP-P)
 - (O1 or O2) + A2 or A3)
 - Probable PSP with predominant frontal presentation (PSP-F)
 - (O1 or O2) + C2

Levels with lower numbers are considered to contribute higher certainty to a diagnosis of PSP than levels with higher numbers.

B2: Mandatory exclusion criteria

Clinical findings

1. Predominant, otherwise unexplained impairment of episodic memory, suggestive of AD
2. Predominant, otherwise unexplained autonomic failure, e.g., orthostatic hypotension (orthostatic reduction in blood pressure after 3 minutes standing 30mm Hg systolic or 15mm Hg diastolic), suggestive of multiple system atrophy or Lewy body disease
3. Predominant, otherwise unexplained visual hallucinations or fluctuations in alertness, suggestive of dementia with Lewy bodies
4. Predominant, otherwise unexplained multisegmental upper and lower motor neuron signs, suggestive of motor neuron disease (pure upper motor neuron signs are not an exclusion criterion)
5. Sudden onset or step-wise or rapid progression of symptoms, in conjunction with corresponding imaging or laboratory findings, suggestive of vascular etiology, autoimmune encephalitis, metabolic encephalopathies, or prion disease
6. History of encephalitis
7. Prominent appendicular ataxia
8. Identifiable cause of postural instability, e.g., primary sensory deficit, vestibular dysfunction, severe spasticity, or lower motor neuron syndrome

Imaging findings

1. Severe leukoencephalopathy, evidenced by cerebral imaging
2. Relevant structural abnormality, e.g., normal pressure or obstructive hydrocephalus; basal ganglia, diencephalic, mesencephalic, pontine or medullary infarctions, hemorrhages, hypoxic-ischemic lesions, tumors, or malformation

8h1.	8h1.	If present, select one: <input type="checkbox"/> 1 Richardson's syndrome criteria <input type="checkbox"/> 2 Non-Richardson's	
8i.	8i.	Traumatic encephalopathy syndrome	<input type="checkbox"/> 1

Excerpted from Katz et al. (2021):

Primary Diagnostic Criteria for TES:

I. Substantial Exposure to Repetitive Head Impacts¹

History of substantial exposure to repetitive impacts to the head is required. These impacts may or may not have been associated with clinical symptoms or signs of concussion or TBI. Individuals should be screened for multiple possible sources of exposure over a lifetime. Examples or sources of substantial exposure to RHIs include the following:

- **Involvement in high-exposure contact or collision sports** such as (but not limited to) boxing, American (tackle) football, ice hockey, soccer, rugby, professional wrestling, mixed martial arts, and some other sports with high risk of exposure to RHIs (e.g., motocross and bull riding).
 - For American football, a minimum of 5 y of organized play is required. This minimum should include ≥ 2 y at the high school level or beyond. [The inclusion of level of play (i.e., high school) is based on clinical judgement, with limited evidence]. Nearly all of the participants in a published study establishing the 5 y threshold played at least high school level football²
 - Exposure risk thresholds for other contact or collision sports, or combinations or contact/collision sports, have not yet been established but should be a substantial number of years (e.g., ≥ 5 y) at a level of play involving routing RHIs.
- **Military service involving RHIs**, including (but not limited to) combat exposure to multiple blast and other explosions, noncombatant exposure to explosions (including breacher training – blasting and forced opening of locked doors), or multiple blows to the head over an extended period of time (e.g., pugil stick training – repeated blows with padded military training weapon).
 - Exposure risk thresholds for military service have not yet been established.
- **Other sources involving multiple head impacts** over an extended period of time, including (but not limited to) domestic violence (or intimate partner violence), head banging, and vocational activities such as breaching locked doors and other barriers by first responders.
 - Exposure risk thresholds for other sources have not yet been established.

II. Core Clinical Features¹

Cognitive impairment or neurobehavioral dysregulation, or both, is required to meet TES criteria. A progressive course is also required to meet TES criteria.

- **Cognitive impairment (all 4 are required)**
 1. As reported by self or informant, or by clinician's report.
 2. Representing a significant decline from baseline functioning. The determination of baseline level of functioning may be challenging and require clinical judgment in cases where decline may have been during the period of RHI exposure.
 3. With deficits in episodic memory and/or executive functioning (additional domains may be impaired in addition to these).
 4. Substantiated by impaired performance on formal neuropsychological testing (if available), as defined by performance at a level of at least 1.5 SDs below appropriate norms, accounting for the individual's estimated premorbid functioning. If formal neuropsychological testing is not available, there should be substantial evidence of impairment below expected norms and/or a person's estimated baseline in episodic memory and/or executive functioning on a standardized mental status examination (e.g., Montreal Cognitive Assessment and Mini-Mental State Examination) by a clinician experienced in the evaluation of cognition.
- **Neurobehavioral dysregulation (all 3 are required)**
 1. As reported by self or informant, or by clinician's report.
 2. Representing a significant change from baseline functioning. The determination of baseline functioning may require clinical judgment in cases where change may have begun during the period of RHI exposure.
 3. With symptoms and/or observed behaviors representing poor regulation or control of emotions and/or behavior, including (but not limited to) explosiveness, impulsivity, rage, violent outbursts, having a short fuse (exceeding what might be described as periodic episodes or minor irritability), or emotional lability (often reported as mood swings), preferable substantiated by standardized measures that demonstrate clinical impairment in these domains. In most cases, standardized measures of neurobehavioral dysregulation will not be available, but there should be substantial evidence of change from a person's baseline. These symptoms and/or observed behaviors do not appear to represent a transient response to life events, e.g., divorce, death of a loved one, and financial problems.
- **Progressive course**
 There is evidence of progressive worsening of these clinical features over a period of at least 1 year in the absence of continued exposure to RHIs or TBI. The evidence should be supported by serial standardized testing (if available) or clear history supporting a change in functioning over time (e.g., clinician reports, job performance evaluations, or self- or informant report).

Abbreviations: RHI = repeated head impact; TBI = traumatic brain injury; TES = traumatic encephalopathy syndrome

IVP FVP **Section 2 – Clinical syndrome** continued...

8j.	8j.	Corticobasal syndrome (CBS)	<input type="checkbox"/> 1
-----	-----	-----------------------------	----------------------------

Corticobasal Syndrome

A clinical syndrome defined by a gradually progressive decline in a constellation of neurologic functions including movement, cognition, and speech. CBS typically starts with asymmetric atypical parkinsonism and involves cortical sensory and cognitive features. The clinical syndrome can be due to pathological entities of Alzheimer’s disease (CBS-AD), 4RTau corticobasal degeneration (CBS-CBD), and 4RTau-PSP (CBS-PSP).

For a diagnosis of CBS, a patient should satisfy:

- All mandatory criteria
- Two major criteria
- Two minor criteria

Mandatory criteria

- Insidious onset and gradual progression
- No sustained response to levodopa treatment

Major (bold) and *minor (italic)* criteria

- Motor features:
 - **Akinetic rigid syndrome**
 - *Focal or segmental myoclonus*
 - *Asymmetric dystonia*
- Cortical motor sensory features:
 - **Limb apraxia**
 - *Alien limb phenomenon*
 - *Cortical sensory loss or dyscalculia*
- Cognitive features:
 - **Speech and language impairment**
 - *Frontal executive dysfunction*
 - *Visuospatial deficits*

Mathew R, Bak TH, Hodges JR. Diagnostic criteria for corticobasal syndrome: a comparative study. *J Neurol Neurosurg Psychiatry*. 2012 Apr;83(4):405-10. doi: 10.1136/jnnp-2011-300875. Epub 2011 Oct 21. PMID: 22019546.

8k. 8k. Multiple system atrophy (MSA) syndrome 1

Excerpted from Wenning et al. (2022):

Diagnostic criteria for clinically probable multiple system atrophy

Essential features	A sporadic, progressive adult (>30 years) onset disease	
	Clinically probable MSA	
Core clinical features	At least two of:	
	1. Autonomic dysfunction defined as (at least one is required):	
	<ul style="list-style-type: none"> Unexplained voiding difficulties with post-void urinary residual volume Unexplained urinary urge incontinence Neurogenic OH ($\geq 20/10$ mmHg blood pressure drop) within 10 minutes of standing or head-up tilt test 	
	2. Parkinsonism	
	3. Cerebellar syndrome (at least one of gait ataxia, limb ataxia, cerebellar dysarthria, or oculomotor features)	
Supportive clinical (motor or non-motor) features	At least one ^a	
MRI marker	Not required	
Exclusion criteria	Absence	
Supportive clinical features		
Supportive motor features	Supportive non-motor features	
<ul style="list-style-type: none"> Rapid progression within 3 years of motor onset Moderate to severe postural instability within 3 years of motor onset Cranio-cervical dystonia induced or exacerbated by L-dopa in the absence of limb dyskinesia Severe speech impairment within 3 years of motor onset Severe dysphagia within 3 years of motor onset Unexplained Babinski sign Jerky myoclonic postural or kinetic tremor Postural deformities 	<ul style="list-style-type: none"> Stridor Inspiratory sighs Cold discolored hands and feet Erectile dysfunction (below age of 60 years for clinically probable MSA) Pathologic laughter or crying 	

^a Excluding erectile dysfunction as an isolated feature.

Abbreviations: MSA = multiple system atrophy; MSA-P = MSA-parkinsonian type; MSA-C = MSA-cerebellar type; OH = orthostatic hypotension; MRI = magnetic resonance imaging.

Wenning GK, Stankovic I, Vignatelli L, Fanciulli A, Calandra-Buonaura G, Seppi K, Palma JA, Meissner WG, Krismer F, Berg D, Cortelli P, Freeman R, Halliday G, Höglinger G, Lang A, Ling H, Litvan I, Low P, Miki Y, Panicker J, Pellecchia MT, Quinn N, Sakakibara R, Stamelou M, Tolosa E, Tsuji S, Warner T, Poewe W, Kaufmann H. The Movement Disorder Society Criteria for the Diagnosis of Multiple System Atrophy. *Mov Disord.* 2022 Jun;37(6):1131-1148. doi: 10.1002/mds.29005. Epub 2022 Apr 21. PMID: 35445419; PMCID: PMC9321158.

8k1. 8k1. If present, select one:
 1 MSA-predominant cerebellar ataxia (MSA-C)
 2 MSA-predominant Parkinsonism (MSA-P)
 3 MSA-predominant dysautonomia

Review the criteria above and determine whether MSA-predominant cerebellar ataxia (MSA-C), MSA-predominant Parkinsonism (MSA-P), or MSA-predominant dysautonomia is present according to the **predominant** motor syndrome.

8l. 8l. Other (SPECIFY): _____ 1

9. 9. Indicate the source(s) of information used to assign the clinical syndrome: Select one or more as **Yes**; all others will default to **No** in the NACC database.

Indicate the types of information that was used to make the diagnosis of clinical syndrome. Collecting this information enables future researchers to understand the basis of the diagnosis, appreciate the context in which it was made, and account for varying practices across different research centers.

			Yes
9a.	9a.	Clinical information (history, CDR)	<input type="checkbox"/> 1
9b.	9b.	Cognitive testing	<input type="checkbox"/> 1
9c.	9c.	Biomarkers (MRI, PET, CSF, plasma)	<input type="checkbox"/> 1

Section 3 – Primary or contributing non-neurodegenerative or non-CVD conditions

The purpose of Section 3 is to identify conditions or disorders that are present and potentially contributing to the clinical syndrome. This must be filled out for those with cognitive or behavioral impairment (i.e., MCI, MBI, dementia, etc.) Indicate whether a given condition is a primary, contributing, or non-contributing cause of the observed impairment, based on the clinician's best judgment.

Select one or more condition(s) as **Present**; if there are no primary or contributing non-neurodegenerative or non-CVD conditions, leave all conditions blank. All conditions left blank will default to **Absent** in the NACC database. *Only one diagnosis should be selected as 1 = Primary.*

*In order to diagnose a disorder, **DSM-5-TR criteria require** that symptoms cause clinically significant distress or impairment in social, occupational, or other important areas of functioning. For more guidance see the **UDS Coding Guidebook, Form D1a**.

Condition	Present	Primary	Contributing	Non-contributing
-----------	---------	---------	--------------	------------------

QUESTIONS 10 – 18:
 These questions consider the etiologic contribution of specific psychiatric disorders to the participant's cognitive, neuropsychiatric/behavioral, or functional phenotype. Several psychiatric disorders (especially mood or anxiety disorders and chronic psychotic disorders) are accompanied by cognitive and/or functional changes. As well, given the high lifetime prevalence of psychiatric disorders in the USA it is important to record their presence in ADC participants even if they do not appear to be contributing to any cognitive, functional or neuropsychiatric/behavioral (e.g., when Major Depression is in remission).

For the sake of diagnostic consistency across Centers, please consult the established taxonomy of the Diagnostic and Statistical Manual of Mental Disorders V-Text Revision (DSM-5-TR) regarding the diagnosis of the psychiatric conditions listed in Questions 10 – 18. If the psychiatric disorder is not present, leave all questions related to the particular psychiatric disorder blank/unchecked. If the psychiatric condition (regardless of whether it is active but successfully treated with medication or counseling) is present, select 1=Present, and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

10.	10.	Major depressive disorder (DSM-5-TR criteria*)	<input type="checkbox"/> 1	10a.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3

If the participant has cognitive impairment due to a psychiatric condition other than those described in Questions 10–17, select **1=Present** for Question 18, specify the psychiatric condition in the specify field, and indicate whether the psychiatric condition is the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the observed cognitive impairment.

18b.	18b.	If present, (SPECIFY) : _____					
19.	19.	Traumatic brain injury (Distinct from TES and CTE, which are documented as a Clinical Syndrome and Etiologic Diagnosis, respectively)	<input type="checkbox"/> ₁	19a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃

The definition of TBI below has been condensed from Menon et al. (2010):
 TBI is defined as an alteration in brain function, or other evidence of brain pathology, caused by an external force.

A. Alteration in brain function is defined as 1 of the following clinical signs:

- Any period of loss of or a decreased LOC
- Any loss of memory for events immediately before (retrograde amnesia) or after the injury (PTA)
- Neurologic deficits (weakness, loss of balance, change in vision, dyspraxia paresis/plegia [paralysis], sensory loss, aphasia, etc.)
- Any alteration in mental state at the time of the injury (confusion, disorientation, slowed thinking, etc.)”

B. or other evidence of brain pathology: Such evidence may include visual, neuroradiologic, or laboratory confirmation of damage to the brain.

C. caused by an external force may include any of the following events:

- The head being struck by an object
- The head striking an object
- The brain undergoing an acceleration/deceleration movement without direct external trauma to the head
- A foreign body penetrating the brain
- Forces generated from events such as a blast or explosion
- Or other force yet to be defined

If the participant has had one or more TBIs as defined above, select **1=Present** for Question 19 and indicate whether the TBI is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment in Question 19a.
 If the participants has had no previous TBI, leave all boxes in Questions 19 and 19a blank and unchecked.

MENON, D. K., SCHWAB, K., WRIGHT, D. W. & MAAS, A. I. 2010. Position statement: definition of traumatic brain injury. Arch Phys Med Rehabil, 91, 1637-40.

20.	20.	Epilepsy	<input type="checkbox"/> ₁	20a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
-----	-----	----------	---------------------------------------	------	---------------------------------------	---------------------------------------	---------------------------------------

Refer to the paper by Fisher et al. (2014)¹ for clinical symptoms consistent with epilepsy.

If epilepsy is not present, leave all boxes in Questions 20 and 20a blank/unchecked. If epilepsy is present, select **1=Present**, and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

¹Epilepsia. 2014 Apr;55(4):475-82. doi: 10.1111/epi.12550. Epub 2014 Apr 14. ILAE official report: a practical clinical definition of epilepsy. Fisher RS1, Acevedo C, Arzimanoglou A, Bogacz A, Cross JH, Elger CE, Engel J Jr, Forsgren L, French JA, Glynn M, Hesdorffer DC, Lee BI, Mathern GW, Moshé SL, Perucca E, Scheffer IE, Tomson T, Watanabe M, Wiebe S.

21.	21.	Normal-pressure hydrocephalus	<input type="checkbox"/> ₁	21a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
-----	-----	-------------------------------	---------------------------------------	------	---------------------------------------	---------------------------------------	---------------------------------------

If normal-pressure hydrocephalus is not present, leave all boxes in Questions 21 and 21a blank/unchecked. If normal-pressure hydrocephalus is present, select **1=Present**, and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

IVP	FVP	Section 3 – Primary or contributing non-degenerative or non-CVD conditions	continued...

22.	22.	CNS Neoplasm	<input type="checkbox"/> ₁	22a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
22b.	22b.	If present, select one: <input type="checkbox"/> ₁ Benign <input type="checkbox"/> ₂ Malignant					

If CNS neoplasm (benign or malignant) is not present, leave all boxes for Questions 22, 22a, and 22b blank/unchecked. If CNS neoplasm is present, select **1=Present**, and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

23.	23.	Human immunodeficiency virus (HIV) infection	<input type="checkbox"/> ₁	23.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
-----	-----	--	---------------------------------------	-----	---------------------------------------	---------------------------------------	---------------------------------------

Recent publications outline updated research criteria for determining the presence of an HIV-associated neurocognitive disorder — for instance, the paper by Antinori et al. (2007).

If HIV is present, select, and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment. If HIV is not present, leave all boxes for Questions 23 and 23a blank/unchecked.

Antinori A, Arendt G, Becker JT, et al. Updated research nosology for HIV-associated neurocognitive disorders. Neurology. 2007;69(18):1789-1799.

24.	24.	Post COVID-19 cognitive impairment	<input type="checkbox"/> ₁	24a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
25.	25.	Sleep apnea (<i>i.e., obstructive, central, mixed or complex sleep apnea</i>)	<input type="checkbox"/> ₁	25a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
26.	26.	Cognitive impairment due to other neurologic, genetic, infectious conditions (<i>not listed above</i>), or systemic disease/medical illness (as indicated on Form A5/D2)	<input type="checkbox"/> ₁	26a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
26b.	26b.	If present, (SPECIFY): _____					

If the participant has cognitive impairment due to a neurological, genetic, or infectious condition other than those described in Questions 10 – 25, or due to any systemic disease or medical illness not described, select **1=Present**, specify the condition or disease in the **Specify** field, and indicate whether the condition or disease is the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the observed cognitive impairment.

27.	27.	Cognitive impairment due to alcohol use or abuse	<input type="checkbox"/> ₁	27a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃

Coding Guidebook for Form D1b: Etiological Diagnosis and Biomarker Support

INSTRUCTIONS: This form is to be completed by the clinician for all participants, including cognitively unimpaired. Check only one box per question.

The purpose of this form is to record when biomarkers are used to support an etiological diagnosis. This will allow future researchers to understand when a diagnosis is made on only clinical grounds versus when information from biomarkers that may reflect underlying pathological changes are used in addition to clinical information.

Given the rapidity of the development of biomarkers, this form is not meant to record biomarker values, methodological techniques, or to indicate availability of samples. Instead, this form has a very focused purpose to indicate when diagnoses are (or are not) supported by biomarker information. Sites should use their own internal methods to determine the relevance, presence or absence of a biomarker.

IVP	FVP	
1.	1.	Were any biomarker results used to support the current etiological diagnosis? (Consider any biomarker results from any time that may be clinically relevant) <input type="checkbox"/> 0 No (SKIP TO QUESTION 12) <input type="checkbox"/> 1 Yes (CONTINUE TO QUESTION 2)

Section 1 – Biomarkers and imaging

Complete this section if any of the following biomarker measures were used to **support or exclude** a presumed etiological diagnosis, including unimpaired individuals who have biomarker characterization. Please complete the checklist below for each data source available and the related questions for each supporting data. Then complete **Section 2: Etiological Diagnosis**. This section is not intended to capture actual data values or register sample availability; instead this section's purpose is to record what information was used by the clinician (or at consensus) to inform an etiological diagnosis.

Fluids

2.	2.	Fluid Biomarkers – Were fluid biomarkers used for assessing the etiological diagnosis? <input type="checkbox"/> 0 No (SKIP TO QUESTION 5) <input type="checkbox"/> 1 Yes, only blood-based biomarkers were used (CONTINUE TO QUESTION 3, and SKIP QUESTIONS 4 – 4d) <input type="checkbox"/> 2 Yes, only CSF-based biomarkers were used (SKIP TO QUESTION 4) <input type="checkbox"/> 3 Yes, both blood- and CSF-based biomarkers were used
----	----	---

Please use the following questions to indicate the results of the fluid biomarker test(s) used by the clinician (or at consensus) to determine the etiological diagnosis at this visit.

If a fluid biomarker was used to exclude an etiological diagnosis, select **0=Not consistent**. If a fluid biomarker was found to be consistent with a diagnosis, select **1=Yes, consistent**. If a fluid biomarker was found to be indeterminate, select **9**. In cases where one or more of the etiologies listed were not assessed using fluid biomarkers, select **8**.

3.	3.	Blood-based biomarkers	No, inconsistent	Yes, consistent	Indeterminate	Not assessed
3a.	3a.	Consistent with AD	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9	<input type="checkbox"/> 8
Based on your center's standards, were blood-based biomarkers interpreted as supporting an etiological diagnosis of AD?						
3b.	3b.	Consistent with FTLD	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9	<input type="checkbox"/> 8
Based on your center's standards, were blood-based biomarkers interpreted as supporting an etiological diagnosis of FTLD?						
3c.	3c.	Consistent with LBD	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9	<input type="checkbox"/> 8
Based on your center's standards, were blood-based biomarkers interpreted as supporting an etiological diagnosis of LBD?						
3d.	3d.	Consistent with other etiology (SPECIFY): _____	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9	<input type="checkbox"/> 8

Based on your center's standards, were blood-based biomarkers interpreted as supporting an etiological diagnosis of another etiology?

IVP FVP Section 1 – Biomarkers and imaging *continued...*

4.	4.	CSF-based biomarkers	No, inconsistent	Yes, consistent	Indeterminate	Not assessed
4a.	4a.	Consistent with AD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Based on your center's standards, were CSF-based biomarkers interpreted as supporting an etiological diagnosis of AD?						
4b.	4b.	Consistent with FTLD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Based on your center's standards, were CSF-based biomarkers interpreted as supporting an etiological diagnosis of FTLD?						
4c.	4c.	Consistent with LBD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Based on your center's standards, were CSF-based biomarkers interpreted as supporting an etiological diagnosis of LBD?						
4d.	4d.	Consistent with other etiology (SPECIFY): _____	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Based on your center's standards, were CSF-based biomarkers interpreted as supporting an etiological diagnosis of another etiology?						

Imaging

5.	5.	Imaging – Was imaging used for assessing etiological diagnosis? <input type="checkbox"/> ₀ No (SKIP TO QUESTION 8) <input type="checkbox"/> ₁ Yes, only PET/SPECT imaging was used (CONTINUE TO QUESTION 6, and SKIP QUESTIONS 7 – 7a3f) <input type="checkbox"/> ₂ Yes, only MR imaging was used (SKIP TO QUESTION 7) <input type="checkbox"/> ₃ Yes, both PET/SPECT and MR imaging were used
----	----	--

Please use the following questions to indicate the results of the imaging used by the clinician (or at consensus) to determine the etiological diagnosis at this visit.

If imaging was used to exclude an etiological diagnosis, select **0=Not consistent**. If imaging was found to be consistent with a diagnosis, select **1=Yes, consistent**. If imaging was found to be indeterminate, select **9**. In cases where one or more of the etiologies listed were not assessed using imaging, select **8**.

6.	6.	PET/SPECT	No	Yes	Indeterminate	Not assessed
6a.	6a.	Tracer-based PET - Were tracer-based PET measures used in assessing an etiological diagnosis? <input type="checkbox"/> ₀ No (SKIP TO QUESTION 6b) <input type="checkbox"/> ₁ Yes, results were normal or abnormal <input type="checkbox"/> ₂ Yes, results were indeterminate				
If used in diagnosis, indicate the results:						
6a1.	6a1.	Elevated Amyloid	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Based on your center's standards, were there evidence of elevated cerebral amyloid on PET imaging?						
6a2.	6a2.	Elevated tau pathology	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Based on your center's standards, were there evidence of elevated cerebral tau on PET imaging?						
6b.	6b.	FDG PET - Was FDG PET data or information used to support an etiological diagnosis? <input type="checkbox"/> ₀ No (SKIP TO QUESTION 6c) <input type="checkbox"/> ₁ Yes, results were normal or abnormal <input type="checkbox"/> ₂ Yes, results were indeterminate				

			No, inconsistent	Yes, consistent	Indeterminate	Not assessed
6b1.	6b1.	Consistent with AD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Based on your center's standards, was an FDG PET scan interpreted as being consistent with an underlying etiology of AD?						
6b2.	6b2.	Consistent with FTLD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Based on your center's standards, was an FDG PET scan interpreted as being consistent with an underlying etiology of FTLD?						
6b3.	6b3.	Consistent with LBD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Based on your center's standards, was an FDG PET scan interpreted as being consistent with an underlying etiology of LBD?						
6b4.	6b4.	Consistent with other etiology (SPECIFY): _____	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈

Based on your center's standards, was an FDG PET scan interpreted as being consistent with an underlying etiology of another etiology?

6c.	6c.	Dopamine Transporter (DAT) Scan - Was DAT Scan data or information used to support an etiological diagnosis?	<input type="checkbox"/> ₀ No <input type="checkbox"/> ₁ Yes, results were normal or abnormal <input type="checkbox"/> ₂ Yes, results were indeterminate			
-----	-----	---	---	--	--	--

Based on your center's standards, was a DAT scan interpreted as being consistent with an underlying etiology of a Parkinson's disorder?

6d.	6d.	Other tracer-based imaging - Were other tracer-based imaging used to support an etiological diagnosis? (SPECIFY): _____	<input type="checkbox"/> ₀ No (SKIP TO QUESTION 7a) <input type="checkbox"/> ₁ Yes, results were normal or abnormal <input type="checkbox"/> ₂ Yes, results were indeterminate			
-----	-----	--	---	--	--	--

			No, inconsistent	Yes, consistent	Indeterminate	Not assessed
6d1.	6d1.	Consistent with AD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Was another tracer-based imaging assessment interpreted as being consistent with AD?						
6d2.	6d2.	Consistent with FTLD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Was another tracer-based imaging assessment interpreted as being consistent with FTLD?						
6d3.	6d3.	Consistent with LBD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
Was another tracer-based imaging assessment interpreted as being consistent with LBD?						
6d4.	6d4.	Consistent with other etiology (SPECIFY): _____	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈

Was another tracer-based imaging assessment interpreted as being consistent with another etiology?

7.	7.	Structural Imaging				
7a.	7a.	Structural Imaging (i.e., MRI or CT) – Was structural imaging data or information used to support an etiological diagnosis?	<input type="checkbox"/> ₀ No (SKIP TO QUESTION 8) <input type="checkbox"/> ₁ Yes, results were normal or abnormal <input type="checkbox"/> ₂ Yes, results were indeterminate			

			No, inconsistent	Yes, consistent	Indeterminate	Not assessed
7a1.	7a1.	Atrophy pattern consistent with AD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈

Based on your center's standards, was an atrophy pattern interpreted as supporting an etiology of AD?

7a2.	7a2.	Atrophy pattern consistent with FTLD	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
------	------	--------------------------------------	---------------------------------------	---------------------------------------	---------------------------------------	---------------------------------------

Based on your center's standards, was an atrophy pattern interpreted as supporting an etiology of FTLD?

7a3.	7a3.	Consistent with Cerebrovascular disease (CVD)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
------	------	---	---------------------------------------	---------------------------------------	---------------------------------------	---------------------------------------

Based on your center's standards, was an atrophy pattern interpreted as supporting an etiology of cerebrovascular disease as a cause for the cognitive disorder?

			No	Yes	Indeterminate	Not assessed
		If there is evidence for CVD on imaging, indicate the findings:				

QUESTIONS 7a3a – 7a3f: Use your Center's local standards to determine whether the participant had imaging evidence for each of the Questions 7a3a – 7a3f. If there is no evidence or ambiguous evidence for each particular CVD listed according to your Center's standards, select **0=No** for the corresponding question. Although each Center's local standards should be used to determine whether the participant has imaging evidence for CVD, clinicians are welcome to refer to the following paper:

Wardlaw JM, et al. Neuroimaging standards for research into small vessel disease and its contribution to ageing and neurodegeneration. Lancet Neurol 2013;12:822-38.

7a3a.	7a3a.	Large vessel infarct(s)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
7a3b.	7a3b.	Lacunar infarct(s)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
7a3c.	7a3c.	Macrohemorrhage(s)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
7a3d.	7a3d.	Microhemorrhage(s)	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈
7a3e.	7a3e.	White matter hyperintensity	<input type="checkbox"/> ₀	<input type="checkbox"/> ₁	<input type="checkbox"/> ₉	<input type="checkbox"/> ₈

7a3e1. 7a3e1. If **Yes**, choose the severity:
₁ Moderate white-matter hyperintensity (CHS score 5-6)
₂ Extensive white-matter hyperintensity (CHS score 7-8+)

10.	10.	Other biomarker modality - Was another biomarker modality used to support an etiological diagnosis? (SPECIFY): _____	<input type="checkbox"/> 0 No (SKIP TO QUESTION 11) <input type="checkbox"/> 1 Yes, results were normal or abnormal <input type="checkbox"/> 2 Yes, results were indeterminate						
			<table border="1"> <thead> <tr> <th>No</th> <th>Yes</th> <th>Indeterminate</th> </tr> </thead> <tbody> <tr> <td><input type="checkbox"/> 0</td> <td><input type="checkbox"/> 1</td> <td><input type="checkbox"/> 9</td> </tr> </tbody> </table>	No	Yes	Indeterminate	<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9
No	Yes	Indeterminate							
<input type="checkbox"/> 0	<input type="checkbox"/> 1	<input type="checkbox"/> 9

10c.	10c.	Consistent with LBD	<input type="checkbox"/> 0 <input type="checkbox"/> 1 <input type="checkbox"/> 9						
10d.	10d.	Consistent with other etiology (SPECIFY): _____	<input type="checkbox"/> 0 <input type="checkbox"/> 1 <input type="checkbox"/> 9						

Supportive genetics

11.	11.	Is there an autosomal dominant pathogenic variant to support an etiological diagnosis?	<input type="checkbox"/> 0 No <input type="checkbox"/> 1 Yes <input type="checkbox"/> 9 Unknown/Not disclosed
-----	-----	--	---

Section 2 – Etiological diagnoses

Using all the available data (i.e. clinical, cognitive, biomarker, etc) please provide an etiological diagnosis. For those with no biomarker data, enter a **presumed** etiological diagnosis.

Must be filled out for all participants. Indicate whether a given condition is a primary, contributing, or non-contributing cause of the observed impairment, based on the clinician’s best judgment. Select one or more etiological diagnoses from questions (below) as **Present**; all others will default to **Absent** in the NACC database. *Only one diagnosis should be selected as 1 = Primary.*

For unimpaired participants: Proceed using your center’s diagnostic philosophy to determine whether the etiology is present and primary, contributing, or non-contributing or leave the checkboxes blank.

		Etiological Diagnoses	Present	12a.	Primary	Contributing	Non-contributing
12.	12.	Alzheimer’s disease	<input type="checkbox"/> 1		<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3

Indicate if the etiological diagnosis is suspected to be Alzheimer’s disease using any combination of clinical criteria and biomarkers, per your center’s standards. If Alzheimer’s disease is not present, leave all boxes for Questions 12 and 12a unchecked. For reference, AD clinical criteria are excerpted and condense from the 2011 NIA-AA criteria for AD dementia (McKhann et al., 2011).

For participants with cognitive and/or behavioral impairment: If Alzheimer’s disease is present, select **1=Present** and indicate whether it is thought to be the **1=Primary** or **2=Contributing** cause of the cognitive impairment.

Probable AD can be indicated as **1=Primary** or **2=Contributing**. On the contrary, Possible Alzheimer’s disease (atypical course or seemingly mixed etiologies) should not be marked as **1=Primary**; the only exception is when there is an atypical course, positive biomarker evidence for AD, and no compelling clinical or biomarker evidence for another primary etiology.

For participants with normal cognition: If the participant has normal cognition and either sufficient biomarker evidence for Alzheimer’s disease or a known genetic mutation, leave all checkboxes in Questions 12 and 12a blank/ unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with Alzheimer’s disease pathology (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center’s diagnostic philosophy:

Option 1: If your center’s practice is to diagnose Alzheimer’s disease in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 12 and 12a** to reflect this diagnosis.

Option 2: If your center prefers not to assign an Alzheimer’s disease diagnosis to cognitively normal individuals despite positive biomarkers, you may **leave all checkboxes in Questions 12 and 12a blank/unchecked**. In this scenario, the biomarker and genetic information provided in **Section 1** can be utilized to determine the presence of preclinical or presymptomatic Alzheimer’s disease.

A. Probable AD is diagnosed when the patient:

1. Meets criteria for dementia, and has the following characteristics:
2. Insidious onset. Symptoms have a gradual onset over months to years; and
3. Clear-cut history of worsening of cognition by report or observation; and
4. The initial and most prominent cognitive deficits are evident on history and examination in one of the following categories.
 - (1) Amnestic disorder: The most common syndromic presentation of AD dementia.
 - (2) Non-amnestic disorders:
 - Language disorder
 - Visuospatial disorder
 - Executive and behavioral disorder
5. Exclusions: The diagnosis of probable AD dementia should not be applied when there is evidence of:
 - (a) substantial concomitant cerebrovascular disease or
 - (b) core features of dementia with Lewy bodies other than dementia itself; or
 - (c) prominent features of behavioral variant frontotemporal dementia; or
 - (d) prominent features of semantic variant primary progressive aphasia or non-fluent/agrammatic variant primary progressive aphasia; or
 - (e) evidence for another concurrent, active neurological disease, or a non-neurological medical co-morbidity or medication use that could have a substantial impact on cognition.

B. Possible AD is diagnosed when the patient meets one of the two following criteria:

1. Atypical course: Meets the core clinical criteria (1) and (4) (above) for probable AD dementia, but either had a sudden onset of cognitive impairment or demonstrates insufficient historical detail or objective cognitive documentation of progressive decline, or
2. Etiologically mixed presentation: Meets all core clinical criteria (1) through (4) (above) for probable AD dementia but has evidence of:
 - (a) concomitant cerebrovascular disease or
 - (b) features of dementia with Lewy bodies other than the dementia itself; or
 - (c) evidence for another neurological disease or a non-neurological medical co-morbidity or medication use that could have a substantial impact on cognition.

McKhann GM, Knopman DS, Chertkow H, et al. The diagnosis of dementia due to Alzheimer's disease: recommendations from the National Institute on Aging-Alzheimer's Association workgroups on diagnostic guidelines for Alzheimer's disease. *Alzheimers Dement.* 2011;7(3):263-269.

The following guidance is excerpted from the 2011 NIA-AA criteria for MCI due to AD (Albert et al., 2011):

Summary of clinical and cognitive evaluation for MCI due to AD

Establish clinical and cognitive criteria

- Cognitive concern reflecting a change in cognition reported by patient or informant or clinician (i.e., historical or observed evidence of decline over time)
- Objective evidence of impairment in one or more cognitive domains, typically including memory (i.e., formal or bedside testing to establish level of cognitive function in multiple domains)
- Largely preserved independence in functional abilities
- Not demented

Examine etiology of MCI consistent with AD pathophysiological process

- Rule out vascular, traumatic, medical causes of cognitive decline, where possible
- Provide evidence of longitudinal decline in cognition, when feasible
- Report history consistent with AD genetic factors, where relevant

Abbreviations: AD, Alzheimer's disease; MCI, mild cognitive impairment

"Alzheimer's and Dementia, 7/3, Albert MS, DeKosky ST, Dickson D, Dubois B, Feldman HH, Fox NC, Gamst A, Holtzman DM, Jagust WJ, Petersen RC, Snyder PJ, Carrillo MC, Thies B, Phelps CH, The diagnosis of mild cognitive impairment due to Alzheimer's disease: recommendations from the National Institute on Aging-Alzheimer's Association workgroups on diagnostic guidelines for Alzheimer's disease, 270-279, 2011, with permission from Elsevier <http://www.sciencedirect.com/science/article/pii/S155252601100104X>."

13.	13.	Lewy body disease	<input type="checkbox"/> ₁	13a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
-----	-----	-------------------	---------------------------------------	------	---------------------------------------	---------------------------------------	---------------------------------------

Refer to the papers McKeith et al., 2017 (see DLB criteria on pages 99 – 100) and Litvan et al., 2003 (see criteria table below) to assess the presence of dementia with Lewy body disease. The following criteria refer for probably and possible MCI with Lewy bodies.

Summary of research criteria for the clinical diagnosis of the prodromal phase of dementia with Lewy Bodies (DLB) excerpted from McKeith et al., 2020¹.

RESEARCH CRITERIA for the clinical diagnosis of probable and possible MCI with Lewy bodies (MCI-LB):

- 1. Essential for a diagnosis of MCI-LB is MCI defined by the presence of each of the following:**
 - Concern by the patient, informant, or clinician regarding cognitive decline.
 - Objective evidence of impairment in 1 or more cognitive domains. The cognitive impairment may include any domain, but is more likely to be associated with attention-executive and/or visual processing deficits.
 - Preserved or minimally affected performance of previously attained independence in functional abilities, which do not meet the criteria for dementia.
- 2. Core clinical features:**
 - Fluctuating cognition with variations in attention and alertness.
 - Recurrent visual hallucinations.
 - REM sleep behavior disorder.
 - One or more spontaneous cardinal features of parkinsonism: these are bradykinesia (defined as slowness of movement and decrement in amplitude or speed), rest tremor, or rigidity.
- 3. Supportive clinical features:**
 - Severe sensitivity to antipsychotic agents; postural instability; repeated falls; syncope or other transient episodes of unresponsiveness; prolonged or recurrent delirium not due to provoking factors such as surgery, infections, or other systemic illness; autonomic dysfunction, e.g., constipation, orthostatic hypotension, urinary incontinence; hypersomnia; hyposmia; REM sleep without atonia; hallucinations in other modalities including passage, and sense of presence phenomena; systematized delusions including Capgras syndrome; apathy, anxiety, and depression.
- 4. Proposed biomarkers:**
 - Reduced dopamine transporter uptake in basal ganglia demonstrated by SPECT or PET.
 - Polysomnographic confirmation of REM sleep without atonia.
 - Reduced meta-iodobenzylguanidine (MIBG) uptake on myocardial scintigraphy.
- 5. Potential biomarkers:**
 - Quantitative EEG showing slowing and dominant frequency variability.
 - Relative preservation of medial temporal lobe structures on structural imaging.
 - Insular thinning and gray matter volume loss on MRI.
 - Low occipital uptake on perfusion/metabolism scan.
 - MCI plus supportive clinical features or potential biomarkers are insufficient to diagnose MCI-LB but may raise suspicion of it and prompt biomarker investigation and may add weight to an existing MCILB diagnosis.
 - MCI-LB is less likely in the presence of any other physical illness or brain disease including cerebrovascular disease, sufficient to account in part or in total for the clinical picture, although these do not exclude an MCI-LB diagnosis and may serve to indicate mixed or multiple pathologies contributing to the clinical presentation.
 - Skin biopsy⁴
- 6. Probable MCI-LB can be diagnosed if:**
 - a. Two or more core clinical features of DLB are present, with or without the presence of a proposed biomarker, or
 - b. Only 1 core clinical feature is present, but with 1 or more proposed biomarkers.
- 7. Probable MCI-LB should not be diagnosed based on biomarkers alone.**
- 8. Possible MCI-LB can be diagnosed if:**
 - a. Only 1 core clinical feature of DLB is present, with no proposed biomarkers, or
 - b. One or more of the proposed biomarkers is present, but there are no core clinical features.

Skin Biopsy Detection of Phosphorylated α -Synuclein in Patients With Synucleinopathies. *JAMA.* 2024 Apr 16;331(15):1298-1306. doi: 10.1001/jama.2024.0792. PMID: 38506839; PMCID: PMC10955354.

For participants with cognitive and/or behavioral impairment: If Lewy body disease (DLB or Parkinson’s disease) is present, select **1=Present**, and indicate whether it is thought to be the **1=Primary** or **2=Contributing** cause of the cognitive impairment. If Lewy body disease is not present, leave all boxes for Questions 13 and 13a unchecked

For participants with normal cognition: If the participant has normal cognition but has a clinical diagnosis of Lewy body disease, select **1=Present** and leave checkbox 13a blank/unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with Neuronal Synuclein disease pathology (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center’s diagnostic philosophy:

Option 1: If your center’s practice is to diagnose Neuronal Synuclein disease in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 13 and 13a** to reflect this diagnosis.

Option 2: If your center prefers not to assign a Neuronal Synuclein disease diagnosis to cognitively normal individuals despite positive biomarkers, you may **leave all checkboxes in Questions 13 and 13a blank/unchecked**. In this scenario, the biomarker and genetic information provided in **Section 1** can be utilized to determine the presence of preclinical or presymptomatic Neuronal Synuclein disease.

IVP **FVP** **Section 2 – Etiological diagnoses** *continued...*

14.	14.	Frontotemporal lobar degeneration	<input type="checkbox"/>	1			
		If present, select all that apply:					
14a.	14a.	Progressive supranuclear palsy (PSP)	<input type="checkbox"/>	1	14a1.	<input type="checkbox"/>	<input type="checkbox"/>
						2	<input type="checkbox"/>
							3

Excerpted from Höglinger et al. (2017):

B1: Mandatory inclusion criteria

1. Sporadic occurrence*
2. Age 40 or older at onset** of first PSP-related symptom***
3. Gradual progression of PSP-related symptoms***

Core Features: We propose four core functional domains as characteristic clinical manifestations of PSP (ocular motor dysfunction [O], postural instability [P], akinesia [A], and cognitive dysfunction [C]. In each domain, we propose three characteristic core clinical features, stratified by presumed levels of certainty (1 [highest], 2 [mid], and 3 [lowest]) that they contribute to the diagnosis of PSP.

LEVELS OF CERTAINTY	OCULAR MOTOR DYSFUNCTION	POSTURAL INSTABILITY	AKINESIA	COGNITIVE DYSFUNCTION
LEVEL 1	O1: Vertical supranuclear gaze palsy	P1: Repeated unprovoked falls within 3 years	A1: Progressive gait freezing within 3 years	C1: Speech/language disorder (i.e., nonfluent/agrammatic variant of primary progressive aphasia or progressive apraxia of speech)
LEVEL 2	O2: Slow velocity of vertical saccades	P2: Tendency to fall on the pull-test within 3 years	A2: Parkinsonism, akinetic-rigid predominantly axial, and levodopa resistant	C2: Frontal cognitive/behavioral presentation
LEVEL 3	O3: Frequent macro square wave jerks or “eyelid opening apraxia”	P3: More than two steps backward on the pull-test within 3 years	A3: Parkinsonism, with tremor and/or asymmetric and/or levodopa responsive	C3: Corticobasal syndrome

Levels with lower numbers are considered to contribute higher certainty to a diagnosis of PSP than levels with higher numbers.

B2: Mandatory exclusion criteria

Clinical findings

1. Predominant, otherwise unexplained impairment of episodic memory, suggestive of AD
2. Predominant, otherwise unexplained autonomic failure, e.g., orthostatic hypotension (orthostatic reduction in blood pressure after 3 minutes standing 30mm Hg systolic or 15mm Hg diastolic), suggestive of multiple system atrophy or Lewy body disease
3. Predominant, otherwise unexplained visual hallucinations or fluctuations in alertness, suggestive of dementia with Lewy bodies
4. Predominant, otherwise unexplained multisegmental upper and lower motor neuron signs, suggestive of motor neuron disease (pure upper motor neuron signs are not an exclusion criterion)
5. Sudden onset or step-wise or rapid progression of symptoms, in conjunction with corresponding imaging or laboratory findings, suggestive of vascular etiology, autoimmune encephalitis, metabolic encephalopathies, or prion disease
6. History of encephalitis
7. Prominent appendicular ataxia
8. Identifiable cause of postural instability, e.g., primary sensory deficit, vestibular dysfunction, severe spasticity, or lower motor neuron syndrome

Imaging findings

1. Severe leukoencephalopathy, evidenced by cerebral imaging
2. Relevant structural abnormality, e.g., normal pressure or obstructive hydrocephalus; basal ganglia, diencephalic, mesencephalic, pontine or medullary infarctions, hemorrhages, hypoxic-ischemic lesions, tumors, or malformation

For participants with cognitive and/or behavioral impairment: If PSP is present, select **1=Present** and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause or a **3=Non-contributing** cause of the cognitive impairment.

For participants with normal cognition and behavior: If the participant has normal cognition but clinical symptoms sufficient for a diagnosis of PSP, select PSP as **1=Present** and leave the checkboxes about whether it is primary or contributing in Question 14a1 blank/unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with PSP pathology (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center's diagnostic philosophy:

Option 1: If your center's practice is to diagnose PSP in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 14a and 14a1** to reflect this diagnosis.

Option 2: If your center prefers not to assign a PSP diagnosis to cognitively normal individuals despite positive biomarkers, you may **leave all checkboxes in Questions 14a and 14a1 blank/unchecked**. In this scenario, the biomarker and genetic information provided in Section 1 can be utilized to determine the presence of preclinical or presymptomatic PSP.

If PSP is not present leave the checkboxes in Questions 14a and 14a1 blank/unchecked.

Höglinger GU, Respondek G, Stamelou M, Kurz C, Josefs KA, Lang AE, Mollenhauer B, Müller U, Nilsson C, Whitwell JL, Arzberger T, Englund E, Gelpi E, Giese A, Irwin DJ, Meissner WG, Pantelyat A, Rajput A, van Swieten JC, Troakes C, Antonini A, Bhatia KP, Bordelon Y, Compta Y, Corvol JC, Colosimo C, Dickson DW, Dodel R, Ferguson L, Grossman M, Kassubek J, Krismer F, Levin J, Lorenzl S, Morris HR, Nestor P, Oertel WH, Poewe W, Rabinovici G, Rowe JB, Schellenberg GD, Seppi K, van Eimeren T, Wenning GK, Boxer AL, Golbe LI, Litvan I; Movement Disorder Society-endorsed PSP Study Group. *Clinical diagnosis of progressive supranuclear palsy: The movement disorder society criteria. 14b. 14b. Corticobasal degeneration (CBD) ₁ 14b2. ₁ ₂ ₃

Refer to diagnostic criteria by Armstrong et al. (2013) when assessing the presence of CBD.

For participants with cognitive and/or behavioral impairment: If CBD is present, select **1=Present** and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

For participants with normal cognition and behavior: If the participant has normal cognition but clinical symptoms sufficient for a diagnosis of CBD, select CBD as **1=Present** and leave the checkboxes about whether it is primary or contributing in Question 14b1 blank/unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with CBD pathology (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center’s diagnostic philosophy:

Option 1: If your center’s practice is to diagnose CBD in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 14b and 14b1** to reflect this diagnosis.

Option 2: If your center prefers not to assign a CBD diagnosis to cognitively normal individuals despite positive biomarkers, you may **leave all checkboxes in Questions 14b and 14b1 blank/unchecked**. In this scenario, the biomarker and genetic information provided in **Section 1** can be utilized to determine the presence of preclinical or presymptomatic CBD.

If CBD is not present, leave all boxes for Questions 14b and 14b1 blank/unchecked.

Proposed clinical phenotypes (syndromes) associated with the pathology of corticobasal degeneration (CBD)	
Syndrome	Features
Probable corticobasal syndrome	<p>Asymmetric presentation of TWO OF:</p> <ul style="list-style-type: none"> a) limb rigidity or akinesia, b) limb dystonia, c) limb myoclonus; <p>PLUS TWO OF:</p> <ul style="list-style-type: none"> d) orobuccal or limb apraxia, e) cortical sensory deficit, f) alien limb phenomena (more than simple levitation)
Possible corticobasal syndrome	<p>May be symmetric; ONE OF:</p> <ul style="list-style-type: none"> a) limb rigidity or akinesia, b) limb dystonia, c) limb myoclonus; <p>PLUS ONE OF:</p> <ul style="list-style-type: none"> d) orobuccal or limb apraxia, e) cortical sensory deficit, f) alien limb phenomena (more than simple levitation).

14c. 14c. FTLD with motor neuron disease ₁ 14c1. ₁ ₂ ₃

Use the following criteria, adapted from El Escorial revisited: Revised criteria for the diagnosis of amyotrophic lateral sclerosis (Brooks et al., 2000)¹:

Requirements for the diagnosis of amyotrophic lateral sclerosis

The diagnosis of ALS requires the PRESENCE of:

- Evidence of lower motor neuron (LMN) degeneration by clinical, electrophysiological or neuropathologic examination;
- Evidence of upper motor neuron (UMN) degeneration by clinical examination; and
- Progressive spread of symptoms or signs within a region or to other regions, as determined by history or examination, together with B1 and B2 in next column.

The diagnosis of ALS requires the ABSENCE of:

- Electrophysiological or pathological evidence of other disease processes that might explain the signs of LMN and/or UMN degeneration; and
- Neuroimaging evidence of other disease processes that might explain the observed clinical and electrophysiological signs.

¹ Brooks BR, Miller RG, Swash M, Munsat TL, Diseases WFO. *El Escorial revisited: revised criteria for the diagnosis of amyotrophic lateral sclerosis. Amyotroph Lateral Scler Other Motor Neuron Disord.* 2000;1(5):293-299.

For participants with cognitive and/or behavioral impairment: If FTLD with motor neuron disease is present, select **1=Present** and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

For participants with normal cognition and behavior: If the participant has normal cognition but clinical symptoms sufficient for a diagnosis of FTLD with motor neuron disease, select **1=Present** and leave the checkboxes about whether it is primary or contributing in Question 14c1 blank/unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with FTLD with motor neuron disease pathology (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center’s diagnostic philosophy:

Option 1: If your center’s practice is to diagnose FTLD with motor neuron disease in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 14c and 14c1** to reflect this diagnosis.

Option 2: If your center prefers not to assign a FTLD with motor neuron disease diagnosis to cognitively normal individuals despite positive biomarkers, you may **leave all checkboxes in Question 14c and 14c1 blank/unchecked**. In this scenario, the biomarker and genetic information provided in **Section 1** can be utilized to determine the presence of preclinical or presymptomatic FTLD with motor neuron disease.

If FTLD with motor neuron disease is not present, leave the checkboxes in Question 14c blank/unchecked.

IVP	FVP	Section 2 – Etiological diagnoses	<i>continued...</i>
-----	-----	--	---------------------

14d.	14d.	FTLD - not otherwise specified (NOS)	<input type="checkbox"/> ₁	14d1.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
------	------	--------------------------------------	---------------------------------------	--------------	---------------------------------------	---------------------------------------	---------------------------------------

Select **1=Present** if FTLD not otherwise specified (NOS) is present (e.g., Pick’s disease). This diagnosis should not be selected if PSP, CBD, or FTLD with motor neuron disease is present. If FTLD NOS is present, indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

If FTLD NOS is not present, leave all checkboxes for Questions 14d and 14d1 blank/unchecked.

14e.	14e.	If FTLD (QUESTION 14) is present, specify FTLD subtype: <input type="checkbox"/> ₁ Tauopathy <input type="checkbox"/> ₂ TDP-43 proteinopathy <input type="checkbox"/> ₃ Other (SPECIFY): _____ <input type="checkbox"/> ₉ Unknown	
------	------	---	--

Select **1=Tauopathy**, **2=TDP-43 proteinopathy**, or **3=Other (specify)** if specific evidence (e.g., genetics) beyond the clinical syndrome is available to indicate the FTLD subtype. If a subtype other than Tauopathy or TDP43 proteinopathy is present, select **3=Other** and specify the subtype. Select **9=Unknown** if there is no evidence beyond the clinical syndrome to specify the FTLD subtype.

15.	15.	Vascular brain injury (based on clinical and imaging evidence according to your Center’s standards)	<input type="checkbox"/> ₁	15a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
-----	-----	---	---------------------------------------	-------------	---------------------------------------	---------------------------------------	---------------------------------------

If there is evidence of significant vascular brain injury confirmed by clinical or neuroimaging studies, select **1=Present** for Question 15. Significant vascular brain injury includes either:

- CLINICAL EVIDENCE of symptomatic stroke (i.e., abrupt onset of focal neurological signs) – OR –
- NEUROIMAGING EVIDENCE of one or more of the following:
 - cystic infarcts (large or small)
 - significant white matter changes (Grade 7–8+ on Cardiovascular Health Study Scale)
 - intraparenchymal hemorrhage
 - multiple microbleeds

If the participant has no clinical evidence of symptomatic stroke and neuroimaging studies do not indicate evidence of significant vascular brain injury, leave the checkboxes in Question 15 and 15a blank/unchecked.

For participants with cognitive impairment: Indicate whether vascular brain injury is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

If there is clinical evidence of a symptomatic stroke with temporal relationship to cognitive decline but no available supporting neuroimaging, select **1=Primary** or **2=Contributing** based on clinical judgment.

If there is significant vascular brain injury but no clear temporal or anatomical relationship with cognitive impairment, select **2=Contributing** or **3=Non-contributing** based on clinical judgment.

If there is a history of gradually progressive cognitive decline preceding a symptomatic stroke in the absence of extensive confluent white matter changes (thereby suggesting an underlying neurodegenerative etiology), select **2=Contributing** or **3=Non-contributing** based on clinical judgment.

For participants with normal cognition: If the participant has normal cognition but has evidence of significant vascular brain injury, select **1=Present** for Question 15 and leave the primary and contributing boxes in Question 15a blank/ unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with Vascular brain injury (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center’s diagnostic philosophy:

Option 1: If your center’s practice is to diagnose Vascular brain injury in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 15 and 15a** to reflect this diagnosis.

Option 2: If your center prefers not to assign a Vascular brain injury diagnosis to cognitively normal individuals despite positive biomarkers, you may **leave all checkboxes in Questions 15 and 15a blank/unchecked**. In this scenario the biomarker and genetic information provided in Section 1 can be utilized to determine the presence of preclinical or presymptomatic Vascular brain injury.

IVP **FVP** **Section 2 – Etiological diagnoses** *continued...*

16. 16. Multiple system atrophy ₁ 16a. ₁ ₂ ₃

Excerpted from Wenning et al. (2022):

Diagnostic criteria for clinically established and clinically probable multiple system atrophy

Division into clinically established MSA-P or MSA-C according to predominant motor syndrome		
Essential features	A sporadic, progressive adult (>30 years) onset disease	
	Clinically established MSA	Clinically probable MSA
Core clinical features	1. Autonomic dysfunction defined as (at least one is required) <ul style="list-style-type: none"> • Unexplained voiding difficulties with post-void urinary residual volume ≥100 mL • Unexplained urinary urge incontinence • Neurogenic OH (≥20/10 mmHg blood pressure drop) within 3 minutes of standing or head-tilt test and at least one of <ol style="list-style-type: none"> 1. Poorly L-dopa-responsive parkinsonism 2. Cerebellar syndrome (at least two of gait ataxia, limb ataxia, cerebellar dysarthria, or oculomotor features) 	At least two of: <ol style="list-style-type: none"> 1. Autonomic dysfunction defined as (at least one is required): <ul style="list-style-type: none"> • Unexplained voiding difficulties with post-void urinary residual volume • Unexplained urinary urge incontinence • Neurogenic OH (≥20/10 mmHg blood pressure drop) within 10 minutes of standing or head-up tilt test 2. Parkinsonism 3. Cerebellar syndrome (at least one of gait ataxia, limb ataxia, cerebellar dysarthria, or oculomotor features)
Supportive clinical (motor or non-motor) features	At least two	At least one
MRI marker	At least one	Not required
Exclusion criteria	Absence	Absence

Supportive clinical features

Supportive motor features

- Rapid progression within 3 years of motor onset
- Moderate to severe postural instability within 3 years of motor onset
- Craniocervical dystonia induced or exacerbated by L-dopa in the absence of limb dyskinesia
- Severe speech impairment within 3 years of motor onset
- Severe dysphagia within 3 years of motor onset
- Unexplained Babinski sign
- Jerky myoclonic postural or kinetic tremor
- Postural deformities

Supportive non-motor features

- Stridor
- Inspiratory sighs
- Cold discolored hands and feet
- Erectile dysfunction (below age of 60 years for clinically probable MSA)
- Pathologic laughter or crying

^a Excluding erectile dysfunction as an isolated feature.

Abbreviations: MSA = multiple system atrophy; MSA-P = MSA-parkinsonian type; MSA-C = MSA-cerebellar type; OH = orthostatic hypotension; MRI = magnetic resonance imaging.

For participants with cognitive and/or behavioral impairment: If MSA is present, select **1=Present** and indicate whether it is thought to be the **1=Primary** cause, a **2=Non-contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

For participants with normal cognition and behavior: If the participant has normal cognition but clinical symptoms sufficient for a diagnosis of MSA, select MSA as **1=Present** and leave the checkboxes about whether it is primary or contributing in Question 16a blank/unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with MSA (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center's diagnostic philosophy:

Option 1: If your center's practice is to diagnose MSA in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 16 and 16a** to reflect this diagnosis.

Option 2: If your center prefers not to assign a MSA diagnosis to cognitively normal individuals despite positive biomarkers, you may **leave all checkboxes in Questions 16 and 16a blank/unchecked**. In this scenario, the biomarker and genetic information provided in **Section 1** can be utilized to determine the presence of preclinical or presymptomatic MSA.

If MSA is not present, leave the checkboxes in Question 16 blank/unchecked.

Wenning GK, Stankovic I, Vignatelli L, Fanciulli A, Calandra-Buonaura G, Seppi K, Palma JA, Meissner WG, Krismer F, Berg D, Cortelli P, Freeman R, Halliday G, Höglinger G, Lang A, Ling H, Litvan I, Low P, Miki Y, Panicker J, Pellicchia MT, Quinn N, Sakakibara R, Stamelou M, Tolosa E, Tsuji S, Warner T, Poewe W, Kaufmann H. *The Movement Disorder Society Criteria for the Diagnosis of Multiple System Atrophy*. *Mov Disord*. 2022 Jun;37(6):1131-1148. doi: 10.1002/mds.29005. 17. 17. Chronic traumatic encephalopathy (CTE)

 1

17a.

 1 2 3

Excerpted from Katz et al. (2021):

Primary Diagnostic Criteria for TES: Substantial Exposure to Repetitive Head Impacts¹

History of substantial exposure to repetitive impacts to the head is required. These impacts may or may not have been associated with clinical symptoms or signs of concussion or TBI. Individuals should be screened for multiple possible sources of exposure over a lifetime. Examples or sources of substantial exposure to RHIs include the following:

- **Involvement in high-exposure contact or collision sports** such as (but not limited to) boxing, American (tackle) football, ice hockey, soccer, rugby, professional wrestling, mixed martial arts, and some other sports with high risk of exposure to RHIs (e.g., motocross and bull riding).
 - For American football, a minimum of 5 y of organized play is required. This minimum should include ≥ 2 y at the high school level or beyond. [The inclusion of level of play (i.e., high school) is based on clinical judgement, with limited evidence]. Nearly all of the participants in a published study establishing the 5-y threshold played at least high school level football²
 - Exposure risk thresholds for other contact or collision sports, or combinations or contact/collision sports, have not yet been established but should be a substantial number of years (e.g., ≥ 5 y) at a level of play involving routing RHIs.
- **Military service involving RHIs**, including (but not limited to) combat exposure to multiple blast and other explosions, noncombatant exposure to explosions (including breacher training – blasting and forced opening of locked doors), or multiple blows to the head over an extended period of time (e.g., pugil stick training – repeated blows with padded military training weapon).
 - Exposure risk thresholds for military service have not yet been established.
- **Other sources involving multiple head impacts** over an extended period of time, including (but not limited to) domestic violence (or intimate partner violence), head banging, and vocational activities such as breaching locked doors and other barriers by first responders.
 - Exposure risk thresholds for other sources have not yet been established.

Abbreviations: RHI = repeated head impact; TBI = traumatic brain injury; TES = traumatic encephalopathy syndrome

Primary Diagnostic Criteria for TES: Core Clinical Features¹

Cognitive impairment or neurobehavioral dysregulation, or both, is required to meet TES criteria. A progressive course is also required to meet TES criteria.

Cognitive impairment (all 4 are required):

1. As reported by self or informant, or by clinician's report.
2. Representing a significant decline from baseline functioning. The determination of baseline level of functioning may be challenging and require clinical judgment in cases where decline may have begun during the period of RHI exposure.
3. With deficits in episodic memory and/or executive functioning (additional domains may be impaired in addition to these). Substantiated by impaired performance on formal neuropsychological testing (if available), as defined by performance at a level of at least 1.5 SDs below appropriate norms, accounting for the individual's estimated for premorbid functioning.
4. If formal neuropsychological testing is not available, there should be substantial evidence of impairment below expected norms and/or a person's estimated baseline in episodic memory and/or executive functioning on a standardized mental status examination (e.g., Montreal Cognitive Assessment and Mini-Mental State Examination) by a clinician experienced in the evaluation of cognition.

Neurobehavioral dysregulation (all 3 are required)

1. As reported by self or informant, or by clinician's report.
2. Representing a significant change from baseline functioning may require clinical judgment in cases where change may have begun during the period of RHI exposure.
3. With symptoms and/or observed behaviors representing poor regulation or control of emotions and/or behavior, including (but not limited to) explosiveness, impulsivity, rage, violent outbursts, having a short fuse (exceeding what might be described as periodic episodes or minor irritability), or emotional lability (often reported as mood swings), preferable substantiated by standardized measures that demonstrate clinical impairment in these domains. In most cases, standardized measures of neurobehavioral dysregulation will not be available, but there should be substantial evidence of change from a person's baseline. These symptoms and/or observed behaviors do not appear to represent a transient response to life events, e.g., divorce, death of a loved one, and financial problems.

Progressive course

There is evidence of progressive worsening of these clinical features over a period of at least 1 year in the absence of continued exposure to RHIs or TBI. The evidence should be supported by serial standardized testing (if available) or clear history supporting a change in functioning over time (e.g., clinician reports, job performance, evaluations, or self- or informant report).

¹ Katz DI, Bernick C, Dodick DW, Mez J, Mariani ML, Adler CH, Alosco ML, Balcer LJ, Banks SJ, Barr WB, Brody DL, Cantu RC, Dams-O'Connor K, Geda YE, Jordan BD, McAllister TW, Peskind ER, Petersen RC, Wethe JV, Zafonte RD, Foley ÉM, Babcock DJ, Koroshetz WJ, Tripodis Y, McKee AC, Shenton ME, Cummings JL, Reiman EM, Stern RA. National Institute of Neurological Disorders and Stroke Consensus Diagnostic Criteria for Traumatic Encephalopathy Syndrome. *Neurology*. 2021 May 4;96(18):848-863. doi: 10.1212/WNL.0000000000011850. Epub 2021 Mar 15. PMID: 33722990; PMCID: PMC8166432.

For participants with cognitive and/or behavioral impairment: If CTE is present, select **1=Present** and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

For participants with normal cognition and behavior: If the participant has normal cognition but clinical symptoms sufficient for a diagnosis of CTE, select CTE as **1=Present** and leave the checkboxes about whether it is primary or contributing in Question 17a blank/unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with CTE (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center’s diagnostic philosophy:

Option 1: If your center’s practice is to diagnose CTE in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 17 and 17a** to reflect this diagnosis.

Option 2: If your center prefers not to assign a CTE diagnosis to cognitively normal individuals, despite positive biomarkers, you may **leave all checkboxes in Questions 17 and 17a blank/unchecked**. In this scenario, the biomarker and genetic information provided in Section 1 can be utilized to determine the presence of preclinical or presymptomatic CTE.

If CTE is not present, leave the checkboxes in Question 17 blank/unchecked.

19.	19.	Huntington’s disease	<input type="checkbox"/> 1	19a.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3
-----	-----	----------------------	----------------------------	------	----------------------------	----------------------------	----------------------------

If Huntington’s disease is present, select **1=Present** for Question 19, and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment in Question 19a, if applicable.

If Huntington’s disease is not present, leave all boxes for Questions 19 and 19a blank/ unchecked.

If the participant has normal cognition and behavior but has Huntington’s disease features or a known mutation, select **1=Present** and leave the primary and contributing boxes in Question 19a blank/unchecked.

20.	20.	Prion disease (CJD, other)	<input type="checkbox"/> ₁	20a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
-----	-----	----------------------------	---------------------------------------	------	---------------------------------------	---------------------------------------	---------------------------------------

Refer to the paper by Puoti et al. (2012)¹ regarding the clinical diagnosis of prion disease.

If prion disease is not present, leave all checkboxes in Questions 20 and 20a blank/unchecked. Select **1=Present** if prion disease (Creutzfeldt-Jakob disease or other type) is present, and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment in Question 19a.

If the participant has normal cognition and behavior but has tested positive for prion disease, select **1=Present** for Question 20 and leave the primary, contributing, and non-contributing boxes in Question 20a blank/ unchecked.

21.	21.	Cerebral amyloid angiopathy	<input type="checkbox"/> ₁	21a.	<input type="checkbox"/> ₁	<input type="checkbox"/> ₂	<input type="checkbox"/> ₃
-----	-----	-----------------------------	---------------------------------------	------	---------------------------------------	---------------------------------------	---------------------------------------

Excerpt from Charidimou et al. 2022:
Boston criteria version 2.0 for sporadic cerebral amyloid angiopathy

1. Definite CAA
Full brain post-mortem examination demonstrating:

- Spontaneous intracerebral hemorrhage, transient focal neurological episodes, convexity subarachnoid hemorrhage, or cognitive impairment or dementia
- Severe CAA with vasculopathy
- Absence of other diagnostic lesion

2. Probable CAA with supporting pathology
Clinical data and pathological tissue (evacuated hematoma or cortical biopsy) demonstrating:

- Presentation with spontaneous intracerebral hemorrhage, transient focal neurological episodes, convexity subarachnoid hemorrhage, or cognitive impairment or dementia
- Some degree of CAA in specimen
- Absence of other diagnostic lesion

3. Probable CAA
For participants aged 50 years and older, clinical data and MRI demonstrating:

- Presentation with spontaneous intracerebral hemorrhage, transient focal neurological episodes, or cognitive impairment or dementia
- At least two of the following strictly lobar hemorrhagic lesions on T2*-weighted MRI, in any combination: intracerebral hemorrhage, cerebral microbleeds, or foci of cortical superficial siderosis or convexity subarachnoid hemorrhage

OR

- One lobar hemorrhagic lesion plus one white matter feature (severe perivascular spaces in the centrum semiovale or white matter hyperintensities in a multispot pattern)†
- Absence of any deep hemorrhagic lesions (i.e., intracerebral hemorrhage or cerebral microbleeds) on T2*-weighted MRI
- Absence of other cause of hemorrhagic lesions*
- Hemorrhagic lesion in cerebellum not counted as either lobar or deep hemorrhagic lesion

4. Possible CAA
For participants aged 50 years and older, clinical data and MRI demonstrating:

- Presentation with spontaneous intracerebral hemorrhage, transient focal neurological episodes, or cognitive impairment or dementia
- Absence of other cause of hemorrhage*
- One strictly lobar hemorrhagic lesion on T2*-weighted MRI: intracerebral hemorrhage, cerebral microbleeds, or foci of cortical superficial siderosis or convexity subarachnoid hemorrhage

OR

- One white matter feature (severe visible perivascular spaces in the centrum semiovale or white matter hyperintensities in a multispot pattern)†
- Absence of any deep hemorrhagic lesions (i.e., intracerebral hemorrhage or cerebral microbleeds) on T2*-weighted MRI
- Absence of other cause of hemorrhagic lesions*
- Hemorrhagic lesion in cerebellum not counted as either lobar or deep hemorrhagic lesion

*Other causes of hemorrhagic lesion: antecedent head trauma, hemorrhagic transformation of an ischemic stroke, arteriovenous malformation, hemorrhagic tumor, central nervous system vasculitis. Other causes of cortical superficial siderosis and acute convexity subarachnoid hemorrhage should also be excluded.

Abbreviations: CAA = cerebral amyloid angiopathy, MRI = magnetic resonance imaging, ICH = intracerebral hemorrhage, TFNE = transient focal neurologic episodes, CI = cognitive impairment, CMB = cerebral microbleed, cSS = cortical superficial siderosis, cSAH = convexity subarachnoid hemorrhage, CSO-PVS = visible perivascular spaces in the centrum semiovale, WMH-MS = white matter hyperintensities in a multispot pattern

For participants with cognitive and/or behavioral impairment: If CAA is present, select **1=Present** and indicate whether it is thought to be the **1=Primary** cause, a **2= Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

For participants with normal cognition and behavior: If the participant has normal cognition but clinical symptoms sufficient for a diagnosis of CAA, select CAA as **1=Present** and leave the checkboxes about whether it is primary or contributing in Question 21a blank/unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with CAA (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center's diagnostic philosophy:

Option 1: If your center's practice is to diagnose CAA in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 21 and 21a** to reflect this diagnosis.

Option 2: If your center prefers not to assign a CAA diagnosis to cognitively normal individuals despite positive biomarkers, you may **leave all checkboxes in Question 21 and 21a blank/unchecked**. In this scenario, the biomarker and genetic information provided in **Section 1** can be utilized to determine the presence of preclinical or presymptomatic CAA.

If CAA is not present, leave the checkboxes in Question 21 blank/unchecked.

IVP **FVP** **Section 2 – Etiological diagnoses** *continued...*

22.	22.	LATE: Limbic-predominant age-related TDP-43 encephalopathy	<input type="checkbox"/> 1	22a.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3
-----	-----	--	----------------------------	-------------	----------------------------	----------------------------	----------------------------

Excerpted from Wolk et. al (submission under review at journal)*:

LATE as the Primary Diagnosis

I. Core Clinical Syndrome* (1 and 2 required)	Probable LATE	Possible LATE
<ol style="list-style-type: none"> 1. Primary amnesic syndrome with tempero-limbic memory loss 2. Other cognitive domains largely spared until much later in the course 3. May have mild semantic memory impairment 4. Indolent course with predominant amnesic syndrome present for at least 2 years 5. Age generally > 75 years old 		
II. Required Imaging		
Significant hippocampal atrophy (out of proportion to global atrophy)		
III. Required Supportive Features for Probable LATE		
A negative test of one of the following to rule out β-amyloid: <ol style="list-style-type: none"> a. Amyloid PET b. CSF Aβ42/40 c. CSF ptau181/Aβ42 or t-tau/Aβ42 		
IV. Required Additional Measures if Amyloid-Positive		Possible LATE
If amyloid-positive based on III, a negative measure of one of the following Tau biomarkers is required: <ol style="list-style-type: none"> a. MTL Tau PET (preferred measure) b. CSF ptau181 		

*Core clinical syndrome differs from typical AD, which is generally defined as an amnesic, multi-domain syndrome, but the overlap is significant making a purely clinical diagnosis challenging. Overlap with limbic-predominant AD is even greater.

Additional supportive neuroimaging features:

1. FDG PET without the stereotypical posterior temporo-parietal hypometabolism seen in AD or anterior temporal/frontoinsular pattern seen in temporal variant FTLD
2. FDG-PET with elevated inferior temporal/MTL ratio and absence of other degenerative patterns
3. Structural MTL changes suggestive of LATE (severe atrophy particularly hippocampal head and anterior ERC/PRC; elevated inferior temporal/MTL ratio)

*Criteria used prior to publication with consent from David Wolk as the lead author on the LATE clinical consensus criteria.

For participants with cognitive and/or behavioral impairment: If LATE is present, select **1=Present** and indicate whether it is thought to be the **1=Primary** cause, a **2=Contributing** cause, or a **3=Non-contributing** cause of the cognitive impairment.

For participants with normal cognition and behavior: If the participant has normal cognition but clinical symptoms sufficient for a diagnosis of LATE, select LATE as **1=Present** and leave the checkboxes about whether it is primary or contributing in Question 22a blank/unchecked.

For participants with normal cognition and behavior and positive biomarkers: For participants who exhibit normal cognitive function but have biomarker evidence consistent with LATE (or possess a known genetic mutation associated with the disease), you have the flexibility to proceed according to your center's diagnostic philosophy:

Option 1: If your center's practice is to diagnose LATE in cognitively normal individuals with positive biomarkers, you may **check the appropriate boxes in Questions 22 and 22a** to reflect this diagnosis.

Option 2: If your center prefers not to assign a LATE diagnosis to cognitively normal individuals despite positive biomarkers, you may **leave all checkboxes in Questions 22 and 22a blank/unchecked**. In this scenario, the biomarker and genetic information provided in **Section 1** can be utilized to determine the presence of preclinical or presymptomatic LATE.

If LATE is not present, leave the checkboxes in Question 22 blank/unchecked.
