

Apolipoprotein E: From Structure to Alzheimer's Disease

**GLADSTONE INSTITUTE OF
NEUROLOGICAL DISEASE**

Impact of ApoE Isoforms on AD

Isoform-specific effects

- Risk: ApoE4 > ApoE3 > ApoE2
- Age of onset: two ε4 - 68 y/o
one ε4 - 75 y/o
no ε4 - 84 y/o
- ApoE4 is associated with
~ 50% of AD

ApoE: Relationship of Structure to Function

ApoE4:	Arg	Arg
ApoE3:	Cys	Arg
ApoE2:	Cys	Cys

ApoE Is Associated with Tangles and Plaques

ApoE Is Associated with Tangles and Plaques

- Isoform-specific binding to tau (apoE3 > apoE4)
- ApoE4 increases tau phosphorylation

ApoE Is Associated with Tangles and Plaques

- Isoform-specific binding to tau (apoE3 > apoE4)
- ApoE4 increases tau phosphorylation

- Isoform-specific binding to A β dependent on source - suggesting a role in clearance
- ApoE4 promotes A β fibers

Human ApoE Transgenic Models (mouse apoE-null)

Relative to apoE3:

AD-like features

- ↑ plaques with hAPP/E4
- ↓ presynaptic terminals with E4 with or without hAPP
- E4 neuronal expression ↑ P-tau, ubiquitin-containing inclusions, and gliosis
- E4 impairment with spatial learning and memory

ApoE Isoform-specific Interactions with A β Peptide Causing Cognitive Decline and Neurodegeneration

Interaction of Multiple Factors through Various Pathways Causing Cognitive Decline and Neurodegeneration

Major Questions and Challenges

ApoE4
ApoE3 *in vitro* studies

1) What are the mechanisms involved?

2) How to move from mechanisms to therapeutics?

Major Questions and Challenges

ApoE4
ApoE3 *in vitro* studies

ApoE4 Domain Interaction Mouse Model

	<u>61</u>	<u>112</u>	<u>255</u>	<u>Domain interaction</u>
Human ApoE3	Arg	Cys	Glu	No
Human ApoE4	Arg	Arg	Glu	Yes
Mouse wt ApoE	Thr	Arg	Glu	
Mouse Arg-61	Arg	Arg	Glu	

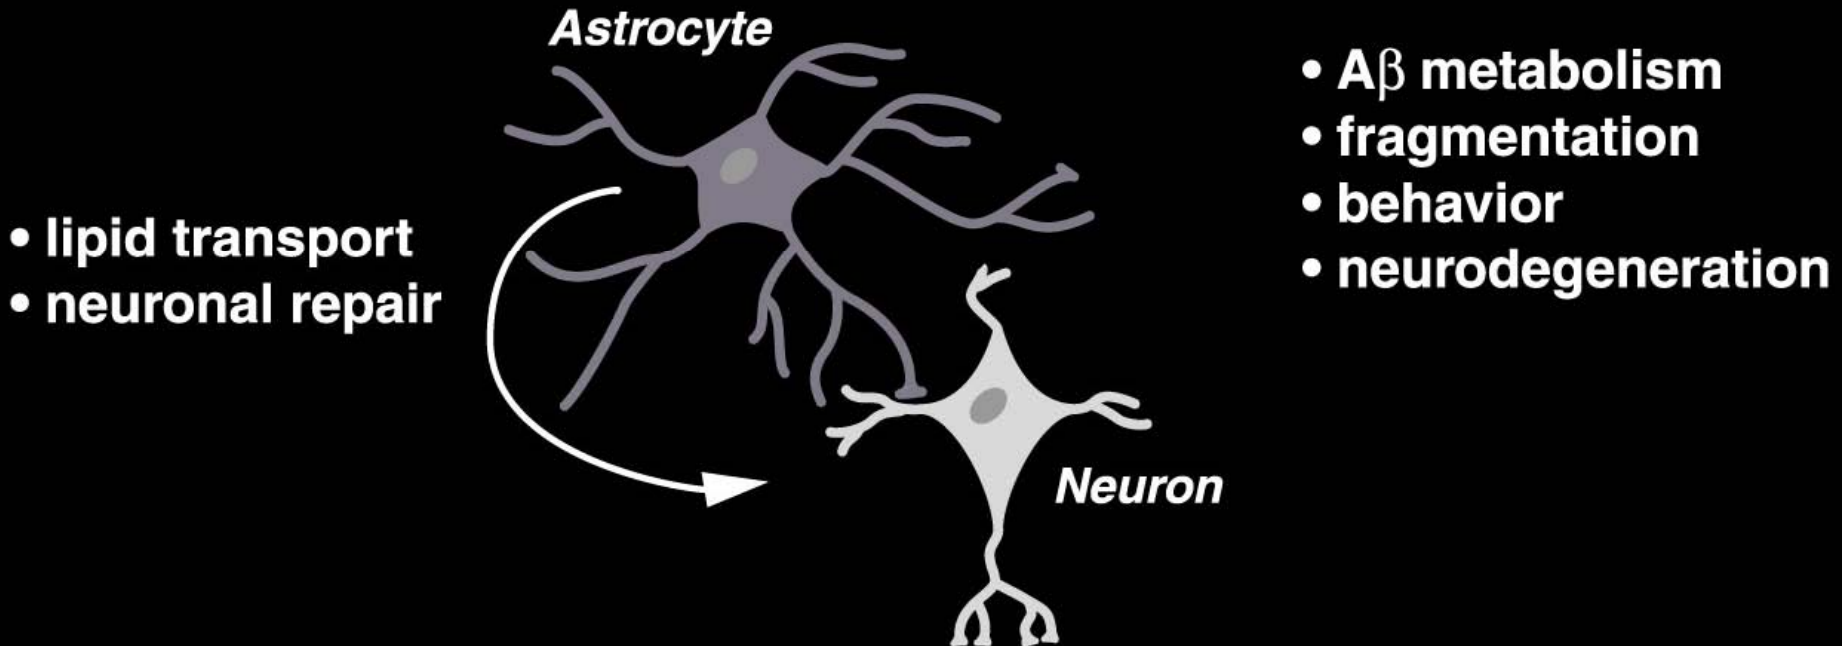

ApoE4 Domain Interaction Mouse Model

	<u>61</u>	<u>112</u>	<u>255</u>	<u>Domain interaction</u>
Human ApoE3	Arg	Cys	Glu	No
Human ApoE4	Arg	Arg	Glu	Yes
Mouse wt ApoE	Thr	Arg	Glu	No
Mouse Arg-61	Arg	Arg	Glu	Yes

Used gene-targeting to replace Thr codon in mouse *ApoE* with Arg codon to generate model of Domain Interaction

ApoE4 Designer Mouse Models

- 1) Arg-61 Domain Interaction Mice
- 2) 83/113 Molten Globule Mice

To determine relative contribution of domain interaction and molten globule formation to known apoE4 effects in the brain

Interaction of Multiple Factors through Various Pathways Causing Cognitive Decline and Neurodegeneration
