CME ON CLINICAL TRIALS: IMPACT & OUTCOMES

The clinical research triad...

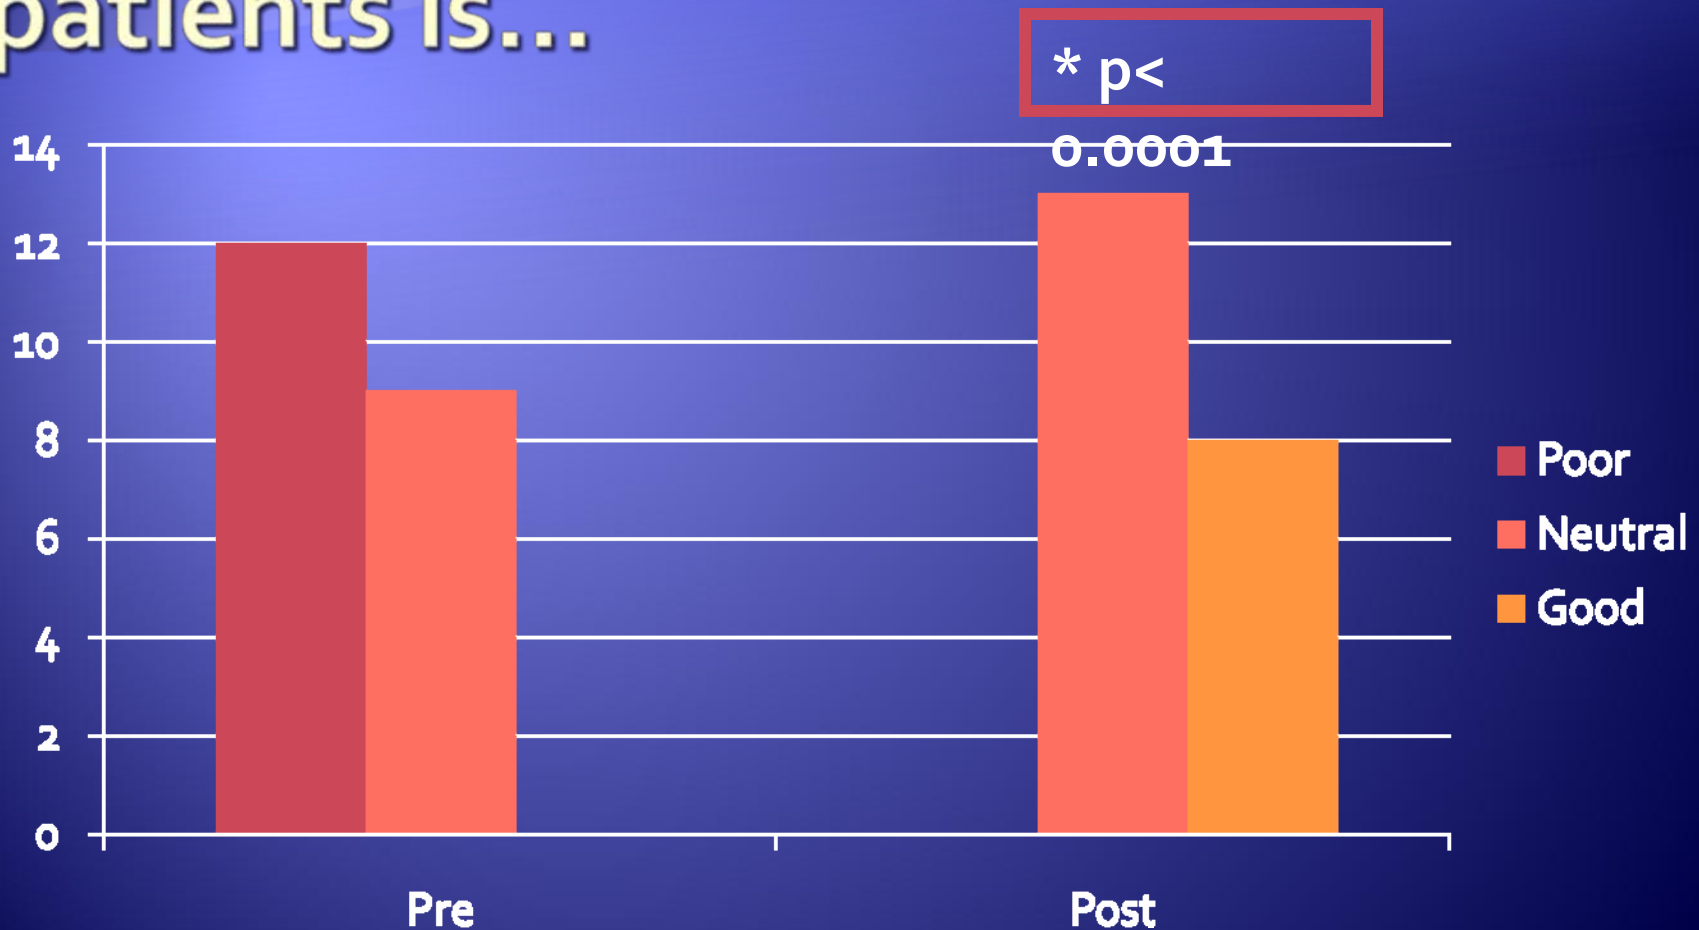

My understanding of clinical trial design is...

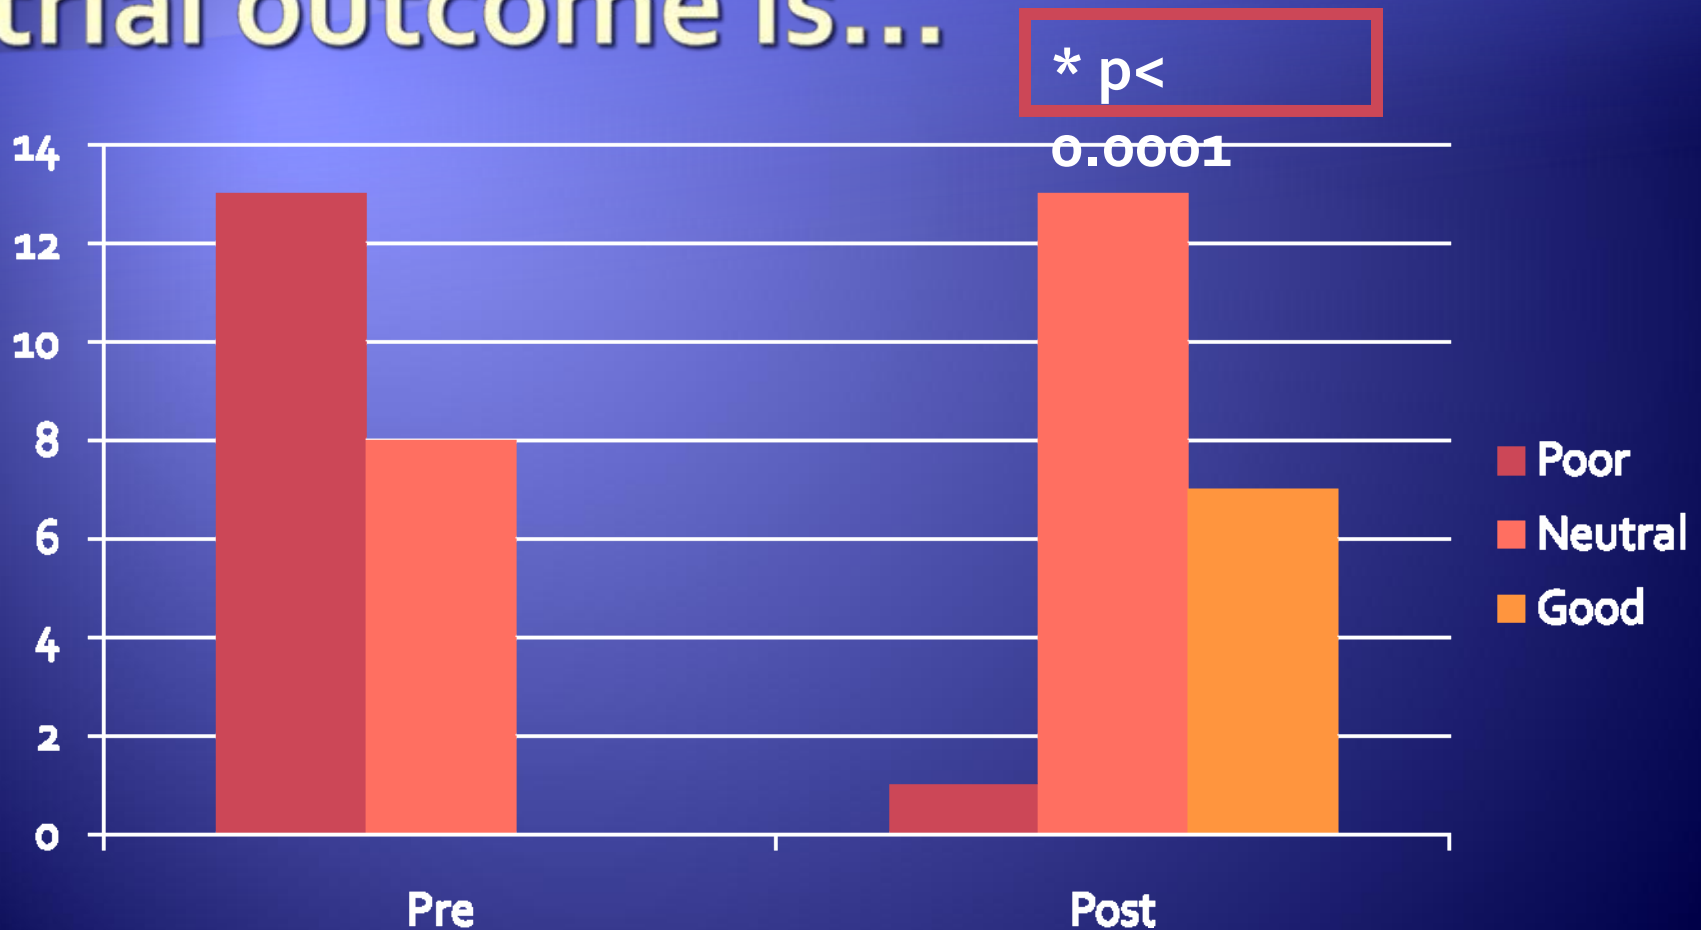

My understanding of FDA approval of medications based on clinical trial outcome is...

My ability to explain clinical trial participation and outcomes to my patients is...

My ability to interpret clinical trial outcome is...

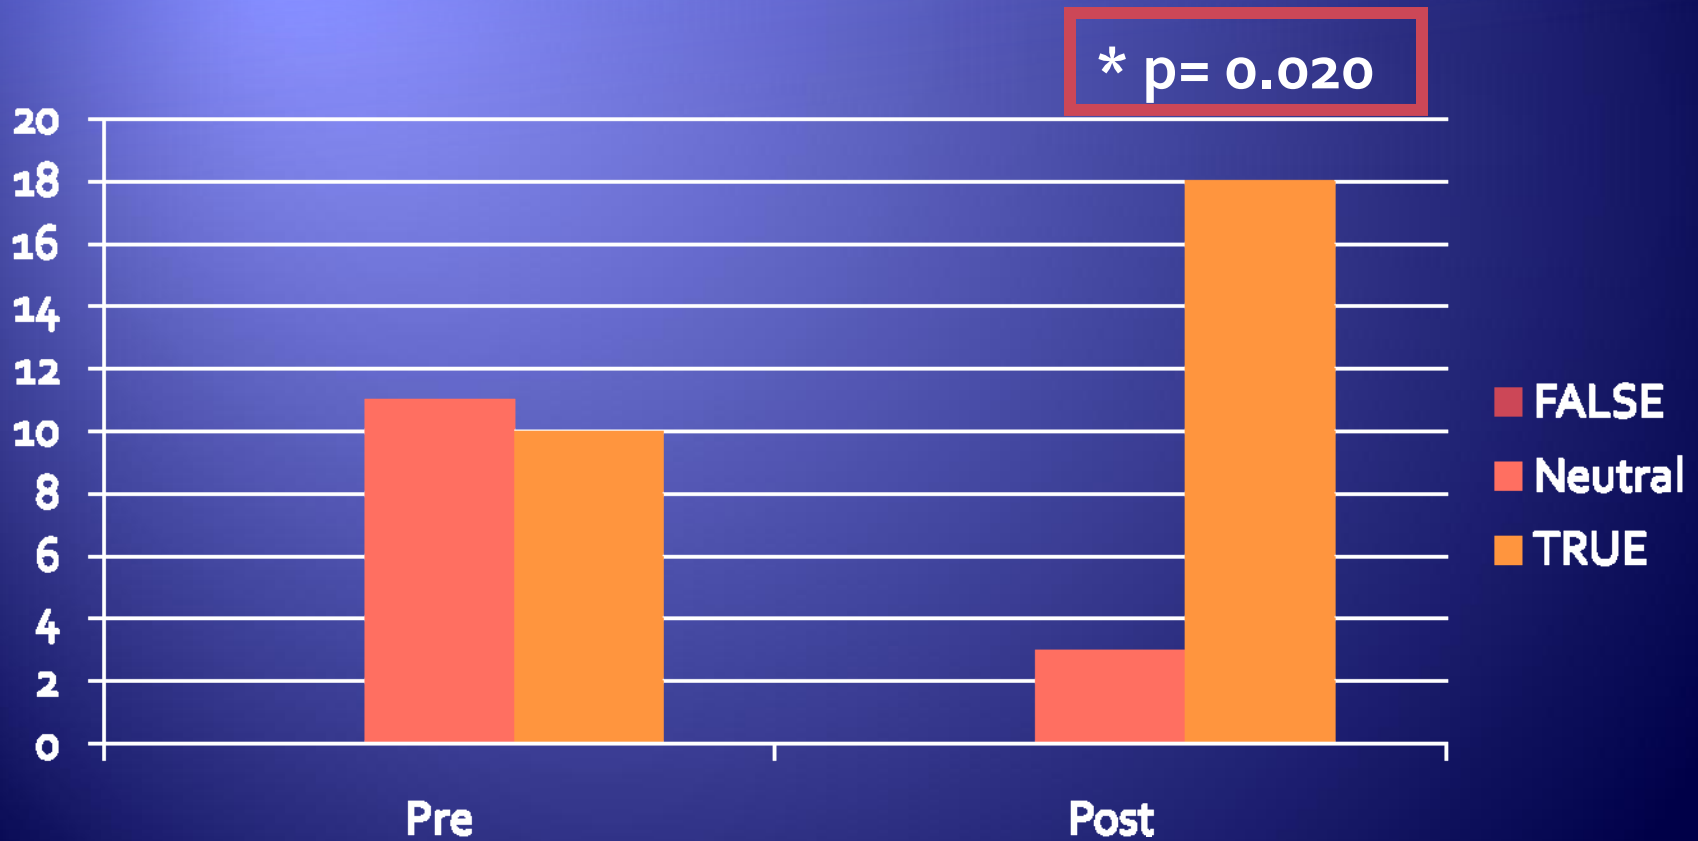

My ability to interpret benefit to my patient from interventions based on clinical trial outcome is...

Research participation by my patients will result in a greater workload for me and my staff

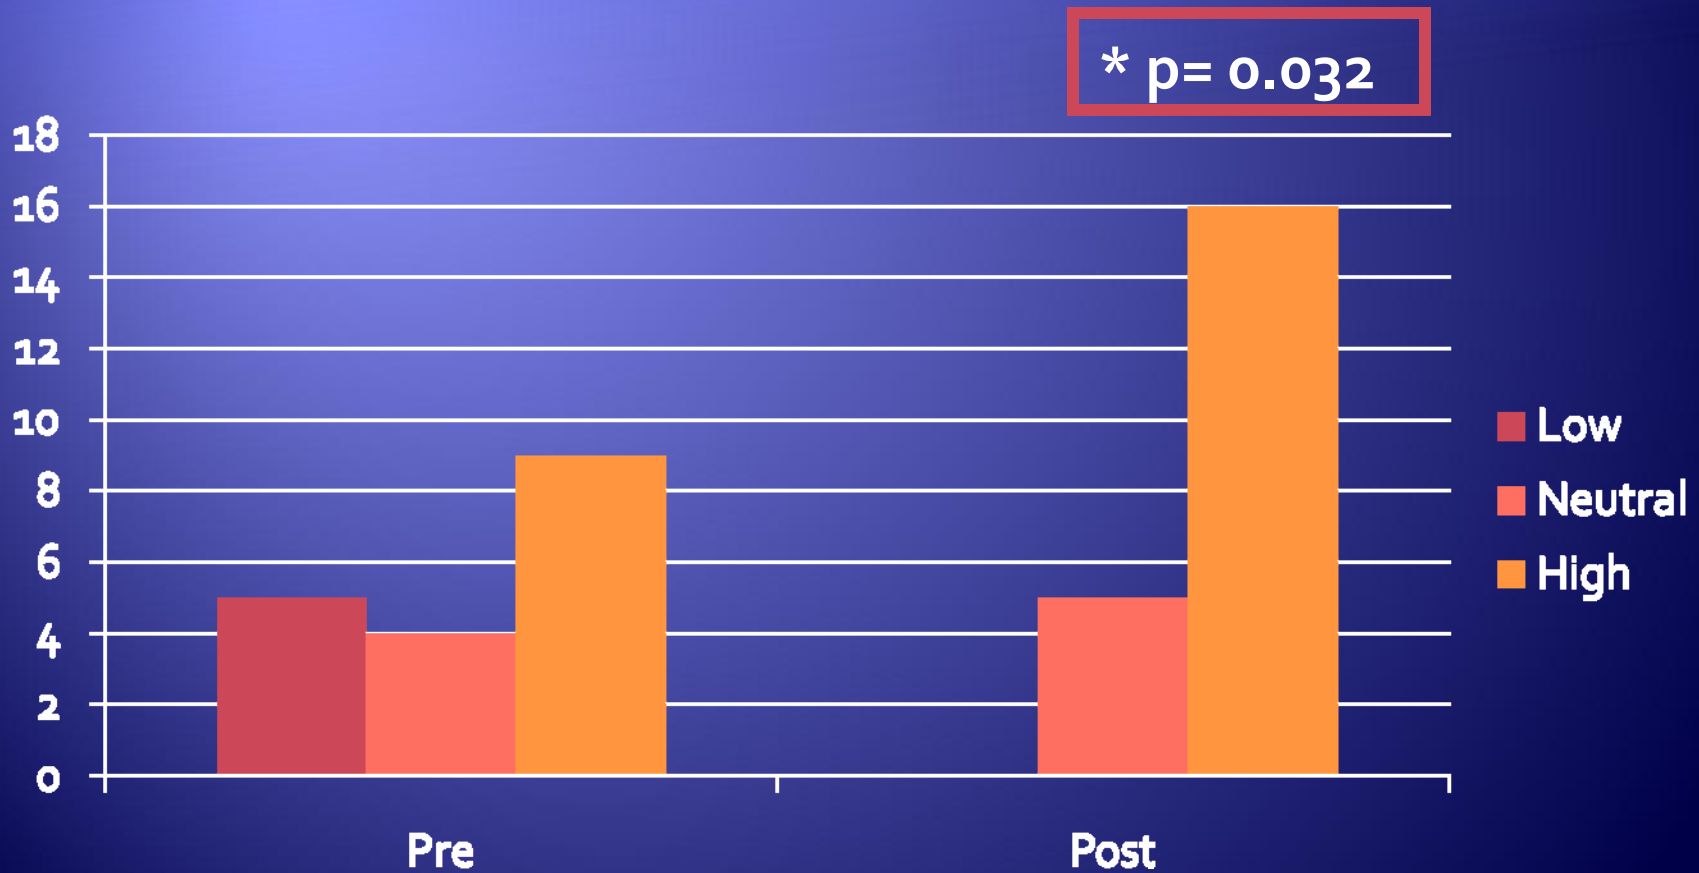

Clinical trial participation will be helpful for my patients

Clinical trial participation will potentially cause harm to my patients

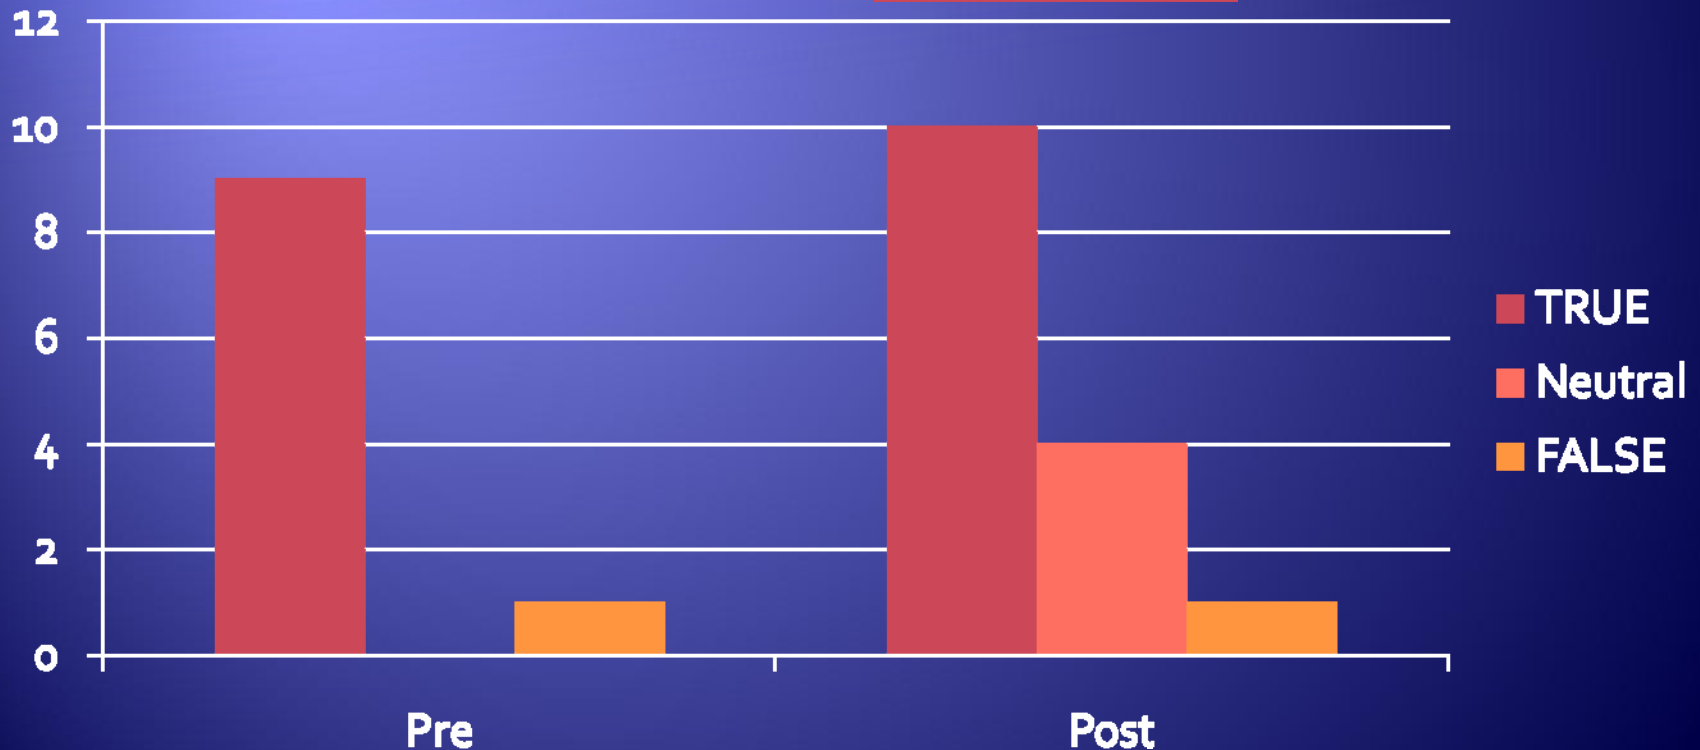

The likelihood that I would refer patients to a clinical trial is

I will lose patients if I refer them to a clinical trial at another institution

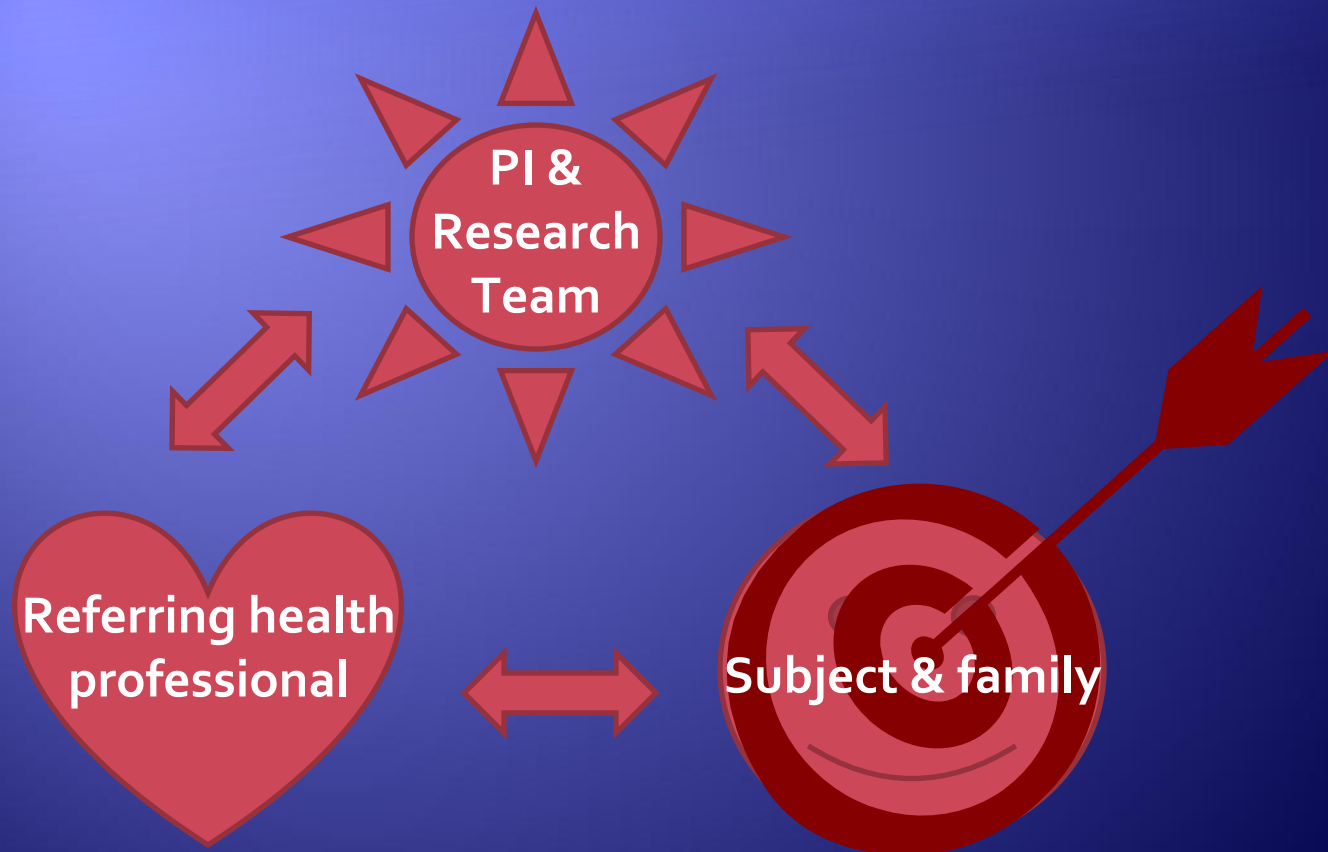

$p = 0.20$

Targeting the referring health professional...

- ◆ Conclusions:
 - ◆ We increased understanding of clinical trials in attendees
 - ◆ Attending health professionals learned the benefits of clinical trial participation
 - ◆ Attendees attitudes towards referring to clinical trials improved
 - ◆ Fear of losing patients was not changed and is a real issue
 - ◆ Total recruitment to any research endeavor from this activity = 0

The clinical research triad...

Thank you!
