

# Building a Polysocial Risk Score to Characterize Diversity in ADRC Participants

Serggio Lanata, MD, MS

Associate Professor in Clinical Neurology

UCSF Department of Neurology

ORE Core Lead, UCSF ADRC

### Neighborhood

Green areas  
Transportation  
Violence  
Pollution

### Service

Healthcare  
Social services  
Mistreatment  
Education

**Social**  
Discrimination  
Isolation  
Safety

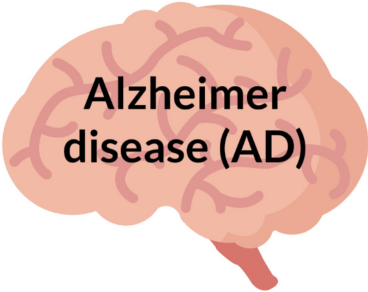

**Economic**  
Employment  
Income  
Work safety

### Behavioral risk factors:

Physical activity  
Social isolation  
Alcoholism  
Smoking  
Cognitive  
Education

### Medical risk factors

Hypertension  
Hyperlipidemia  
Hearing loss  
TBI  
Obesity  
Depression  
Diabetes

**Alzheimer disease (AD)**

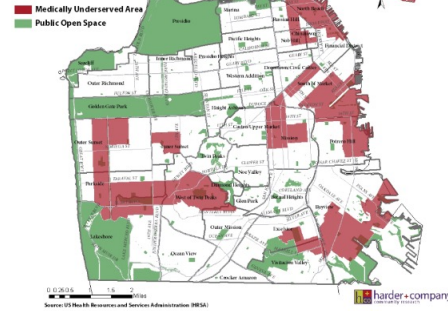

**Map 3: Food market score\***

\*A relative measure of the number and variety of retail resources within one mile, weighed by food offerings and distance. Data source: Dun and Bradstreet, SFIP, 2011.

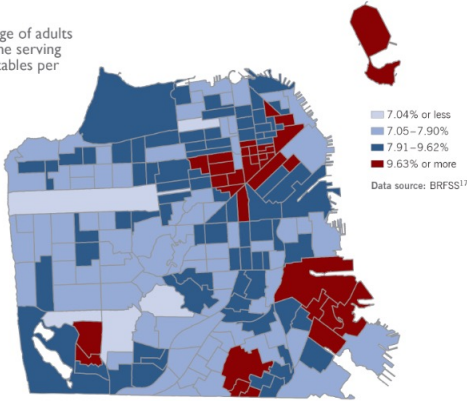

**Appendix D: Medically Underserved Areas in San Francisco**

**Medically Underserved Areas in San Francisco**

Source: US Health Resources and Services Administration (HRSA)

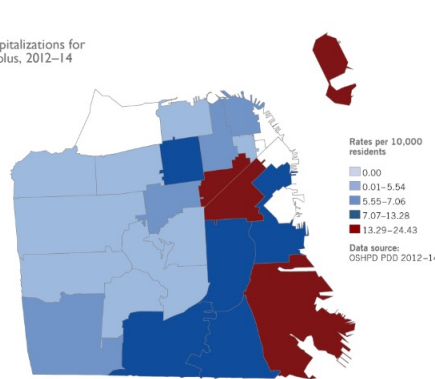

**Map 4: Percentage of adults eating less than one serving of fruits and vegetables per day, 2013**

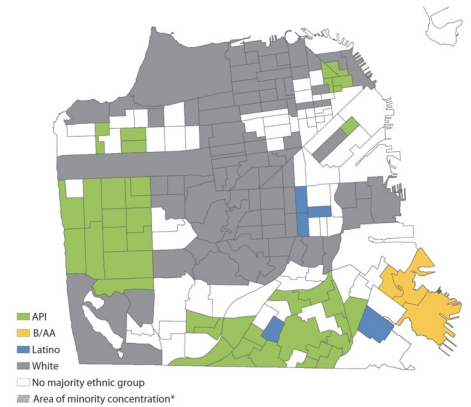

Data source: BRFSS<sup>17</sup>

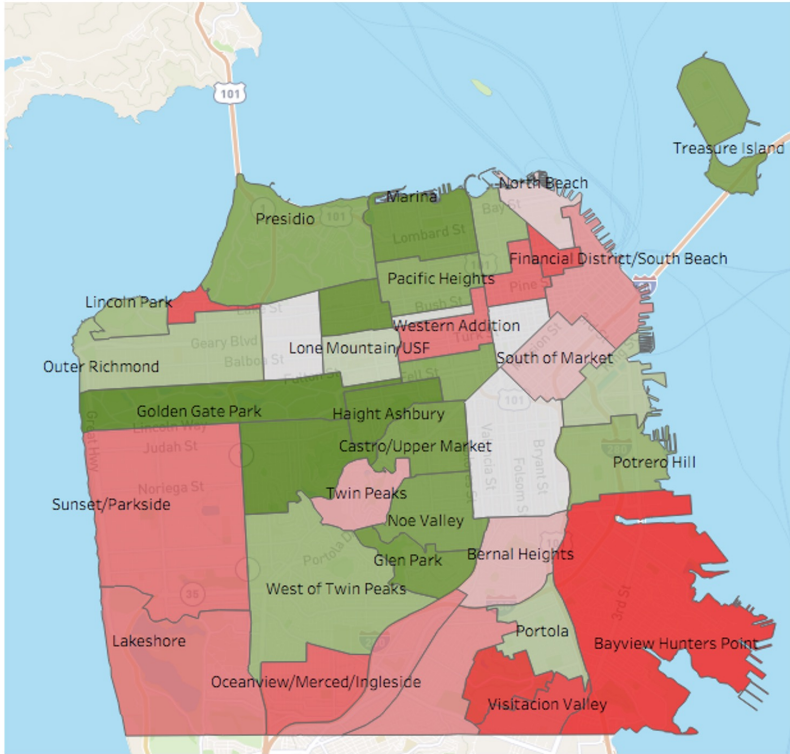

**Map 1: Age-adjusted hospitalizations for diabetes among adults 18-plus, 2012-14**

Hospitalization rates for diabetes among Black/African Americans increased from 2005 to 2014 while decreasing or remaining stable for all other ethnic groups in San Francisco.

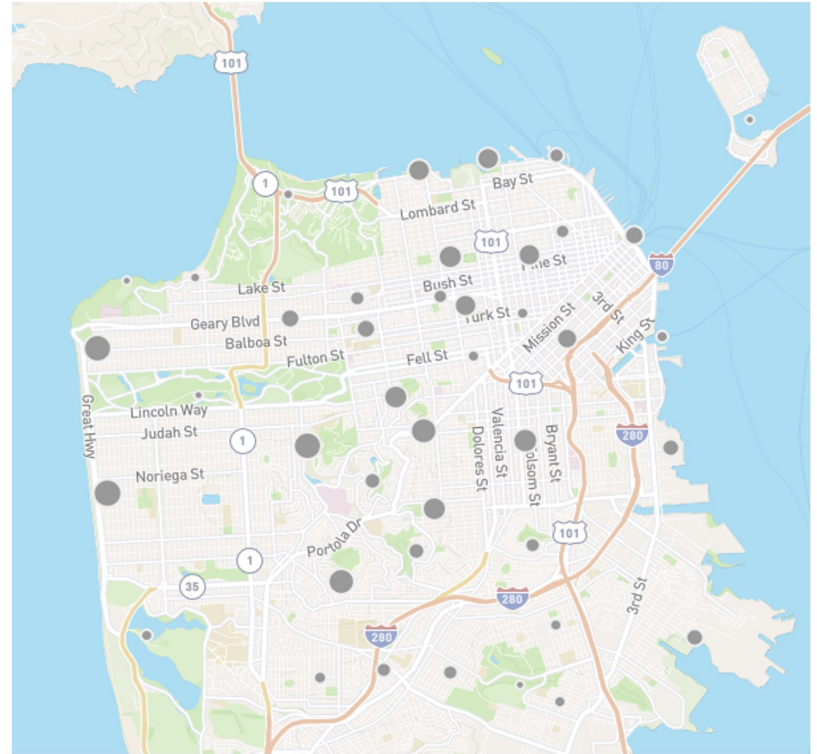

Data source: OSHPD PDD 2012-14

2017 data

San Francisco

East Bay

San Jose

-  Community-based clinics
-  Community centers
-  Senior centers

# Overarching aims of our outreach program

---

- 1) Improve access to clinical care for Chinese -, English -, and Spanish - speaking older adult San Franciscans living within the most *underserved* and *vulnerable* neighborhoods of the city.
- 2) Educate older adult San Franciscans living in *underserved*, *underrepresented*, and *vulnerable* neighborhoods on various topics related to neurocognitive disorders and brain health promotion strategies.
- 3) Incentivize and facilitate recruitment and retention of ADRC participants from *underrepresented* and *vulnerable* backgrounds.
- 4) **Study associations between social and environmental exposures and late-life brain health outcomes.**

記憶與老化研究中心社區外展團隊

## Programa de alcance comunitario

**UCSF** Weill Institute for Neurosciences  
Memory and Aging Center

# Self-identified race/ethnicity is a poor marker of within-group biological similarity and between-group biological difference

## American Society of Human Genetics (Nov. 2017):

"Humans cannot be divided into biologically distinct subcategories...human genetics challenges the traditional concept of different races of humans as biologically separate and distinct."

"There is considerable genetic overlap among members of different [socially-defined] populations. Such patterns of genome variation are explained by patterns of migration and mixing of different populations throughout human history."

"Genetics exposes the concept of "racial purity" as **scientifically meaningless**."

"Culture refers to the integrated patterns of human behavior that include the language, thoughts, communications, actions, customs, beliefs, values, and institutions of racial, ethnic, religious, or social groups" .

<https://npin.cdc.gov/pages/cultural-competence>

## Racial and ethnic differences in brain health outcomes in the US are primarily driven by social and environmental factors:

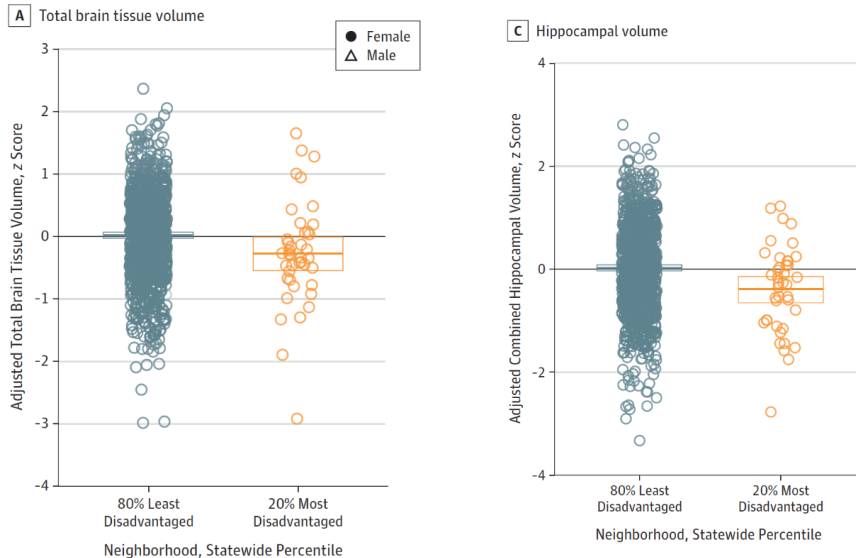

" As a low-income worker, it is hard to access primary care because of **health insurance**, so I go to [a SF hospital]. It may take **up to an hour to travel there**. It is hard to get translation and **sometimes I have to bring my own translation. Getting medication is difficult and not convenient**. I have to travel further in the city and often multiple times to get one medication, and **wait countless hours**. This **affects my work schedule** because I can't take that much time off. "

*- Chinese speaking resident of southeast San Francisco*

# Association of Neighborhood-Level Disadvantage With Cerebral and Hippocampal Volume

Jack F. V. Hunt, BA; William Buckingham, PhD; Alice J. Kim, BA; Jennifer Oh, BS; Nicholas M. Vogt, BA; Erin M. Jonaitis, MS, PhD; Tenah K. Hunt, MPH, PhD; Megan Zuelsdorff, PhD; Ryan Powell, PhD; Derek Norton, MS; Robert A. Rissman, PhD; Sanjay Asthana, MD; Ozioma C. Okonkwo, PhD; Sterling C. Johnson, PhD; Amy J. H. Kind, MD, PhD; Barbara B. Bendlin, PhD

“ In the primary analysis of 951 participants (637 women [67.0%]; mean [SD] age, 63.9 [8.1] years), living in the 20% most disadvantaged neighborhoods was associated with 4.1% lower hippocampal volume ( $\beta = -317.44$ ; 95% CI,  $-543.32$  to  $-91.56$ ;  $P = .006$ ) and 2.0% lower total brain tissue volume ( $\beta = -20\,959.67$ ; 95% CI,  $-37\,611.92$  to  $-4307.43$ ;  $P = .01$ ), after controlling for intracranial volume, individual-level educational attainment, age, and sex. **Robust propensity score–matched analyses determined that this association was not due to racial/ethnic or demographic characteristics.**”

**Viewpoint**

April 3, 2020

# Addressing Social Determinants of Health Time for a Polysocial Risk Score

Jose F. Figueroa, MD, MPH<sup>1,2</sup>; Austin B. Frakt, PhD<sup>1,3,4</sup>; Ashish K. Jha, MD, MPH<sup>1,5</sup>[» Author Affiliations](#) | [Article Information](#)

JAMA. 2020;323(16):1553-1554. doi:10.1001/jama.2020.2436

- Analogous to a polygenic risk score but constructed based on social/environmental exposures.
- An important concept, given that in the US, self-reported race and ethnicity may not be a reliable proxy of within-group homogeneity everywhere in the country.
- A polysocial risk score would allow us to improve our understanding of social vulnerability in relation to specific brain health outcomes across different research projects at the MAC.

# Life Course Epidemiology 101

**Critical/sensitive model:** social/environmental exposures have differing heightened effects on individual health outcomes only during specific life periods.

**Accumulation model:** Timing is less relevant, what matters most is the cumulative duration of exposures throughout life.

Green MJ, Popham F. Life course models: Improving interpretation by consideration of total effects. *Int J Epidemiol.* 2017;46(3):1057-1062. doi:10.1093/ije/dyw329

# The creation of the MAC SEDBH-Q

- **Guiding framework:** NIH Health Disparities Framework, SF DPH documents, clinical experience.
- **Existing questionnaires:** “Capturing Social and Behavioral Domains in Electronic Health Records”(IOM Report), UCSF Clinical and Translational Science Institute, literature review.
- **Consultation with community partners and MDs of diverse backgrounds**
- **Translation to Spanish, Mandarin, Cantonese**
- **Face validity testing of questionnaire and iterative revision**
- **Pilot testing in each language**

# The creation of the MAC SEDBH-Q

## **Roughly 80 questions that probe a wide range of life exposures:**

- Maternal and paternal background
- Expanded sociodemographic characteristics (self-reported race and ethnicity, cultural background; sexual orientation and gender; linguistic abilities, etc.)
- Family dynamics and adverse childhood experiences
- Work experiences
- Exposure to potentially traumatic experiences
- Discrimination
- Resource strain
- Home and neighborhood environment
- Health care access
- Overall stress

# Progress

---

## SDOBH – Q (English, Spanish, Chinese)

Language	Sent	Completed	Incomplete	In progress	Declined
Spanish	79	40	1	4	0
English	238	119	20	8	11
Mandarin/Cantonese	119	20	0	2	2

\* *RedCAP questionnaire (including consent)*

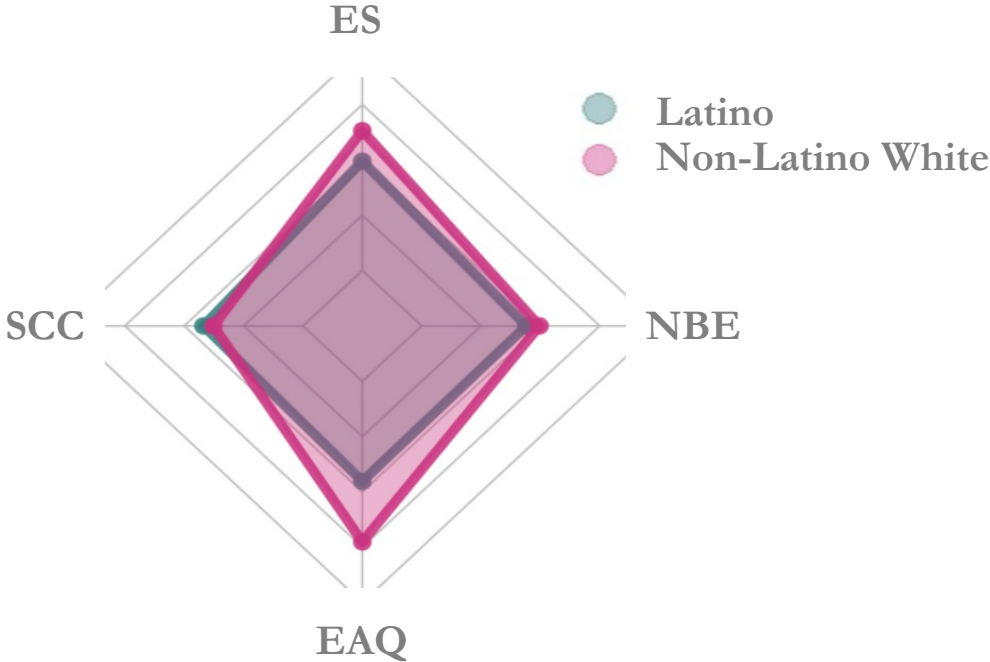

\*\* *40 to 60 minutes to complete*

\*\* *\$80 per submitted questionnaire*

**Main challenges:** Lack of computer access, low computer literacy, non-responders.

## Jet Vonk, PhD

Asst Professor in Residence  
Neurology

Jet Vonk is an Assistant Professor at the UCSF Memory and Aging Center, Department of Neurology. She received her PhD degree in Speech-Language-Hearing Sciences from the City University of New York Graduate Center, with a focus on neurolinguistics and cognitive science. She also maintains an affiliation with the Department of Epidemiology at Utrecht University in the Netherlands, where she is currently obtaining a second PhD in Epidemiology.
